BONUS!!! Download part of ValidBraindumps PAP-001 dumps for free: <https://drive.google.com/open?id=1skdYMOAluuRYQ41oD1e5vrKkAjdwBT8>

If you want to sail through the difficult Ping Identity PAP-001 Exam, it would never do to give up using exam-related materials when you prepare for your exam. If you would like to find the best certification training dumps that suit you, ValidBraindumps is the best place to go. ValidBraindumps is a well known and has many excellent exam dumps that relate to IT certification test. Moreover all exam dumps give free demo download. If you want to know whether ValidBraindumps practice test dumps suit you, you can download free demo to experience it in advance.

## Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Installation and Initial Configuration: This section of the exam measures skills of System Engineers and reviews installation prerequisites, methods of installing or removing PingAccess, and securing configuration database passwords. It explains the role of run.properties entries and outlines how to set up a basic on-premise PingAccess cluster.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.</li></ul>

## PAP-001 Pdf Demo Download - Test PAP-001 Preparation

You hardly have to worry about whether or not you can pass the exam with our PAP-001 exam braindumps. Many users of PAP-001 exam prep can use your own achievements to prove to you that under the guidance of our PAP-001 Study Materials, you must pass the exam. Don't hesitate anymore. What you should treasure now is time! Just come and buy our PAP-001 learning guide, you will never feel regret!

## Ping Identity Certified Professional - PingAccess Sample Questions (Q65-

## Q70):

### NEW QUESTION # 65

An organization wants to take advantage of a new product feature that requires upgrading the PingAccess cluster from 7.3 to the current version. The administrator downloads the required files and places the files on the PingAccess servers. What should the administrator do next?

- A. Upgrade the Replica Admin.
- B. Disable cluster communication.
- C. Disable Key Rolling.
- **D. Upgrade the Admin Console.**

**Answer: D**

### NEW QUESTION # 66

An application requires MFA for URLs that are considered high risk. Which action should the administrator take to meet this requirement?

- A. Apply a Web Session Attribute rule to the resource.
- B. Create an Authentication Requirement named MFA\_Required.
- **C. Apply an Authentication Requirements rule to the resource.**
- D. Apply an HTTP Request Parameter rule to the resource.

**Answer: C**

Explanation:

PingAccess allows fine-grained authentication enforcement by applying Authentication Requirement rules at the resource level. These rules can invoke MFA flows based on request context or policy.

Exact Extract:

"Authentication requirement rules determine whether PingAccess challenges a user to authenticate again (for example, with MFA) before allowing access to a protected resource."

\* Option A is incomplete. Creating a requirement does nothing unless it is applied.

\* Option B is correct because applying the Authentication Requirement rule to the specific resource (URL) enforces MFA only for that resource.

\* Option C is incorrect; Web Session Attribute rules are about evaluating existing session attributes, not triggering MFA.

\* Option D is incorrect; HTTP Request Parameter rules are used to evaluate request data, not enforce MFA policies.

Reference: PingAccess Administration Guide - Authentication Requirements

### NEW QUESTION # 67

An administrator needs to add a set of rules to an application protected by a PingAccess agent. Which rule will be unavailable to add to the application?

- **A. Rewrite Cookie Domain**
- B. Network Range
- C. Cross-Origin Request
- D. Rate Limiting

**Answer: A**

Explanation:

PingAccess distinguishes between gateway rules and agent rules. Some processing rules, such as Rewrite Cookie Domain, only apply when PingAccess is acting as a reverse proxy (gateway), not when protecting applications via agents.

Exact Extract:

"Rewrite Cookie Domain rules are not supported for agent applications. They are only available for proxied (gateway) applications."

\* Option A (Rewrite Cookie Domain) is correct - unavailable with agent applications.

\* Option B (Network Range) is available for both agents and gateways.

\* Option C (Rate Limiting) is supported on both application types.

\* Option D (Cross-Origin Request) is also supported in both.

Reference: PingAccess Administration Guide - Agent vs. Gateway Rules

### NEW QUESTION # 68

Where should an administrator adjust SameSite Cookie settings?

- A. Sites
- **B. Web Sessions**
- C. Rules
- D. Applications

**Answer: B**

Explanation:

The SameSite attribute is applied to session cookies to control cross-site behavior. In PingAccess, session cookie configuration (including SameSite) is defined at the Web Session level.

Exact Extract:

"Web session configuration includes cookie attributes such as name, domain, secure flag, HTTPOnly, and SameSite."

- \* Option A (Rules) is incorrect - rules govern access control, not cookies.
- \* Option B (Sites) defines backend connections, not session cookies.
- \* Option C (Applications) ties resources to sessions but does not define cookie behavior.
- \* Option D (Web Sessions) is correct - session cookie SameSite settings are configured here.

Reference: PingAccess Administration Guide - Web Session Cookies

### NEW QUESTION # 69

An internal audit reveals that an agent has been compromised. What action must be taken to re-secure the agent?

- A. Change the agent.engine.configuration.shared.secretvalue in the agent.properties file
- B. Select a new Agent Trusted Certificate
- **C. Download and apply a new agent.properties file**
- D. Reinstall the agent

**Answer: C**

Explanation:

When a PingAccess agent is compromised, the secure approach is to invalidate the existing credentials and issue a new configuration file from the PingAccess Admin Console. This provides a fresh agent.properties file with new secrets, ensuring compromised keys cannot be reused.

Exact Extract:

"If an agent is compromised, revoke and regenerate the agent configuration by downloading a new agent.properties file from the administrative console."

- \* Option A is incorrect - manually changing the secret in the file does not propagate it to PingAccess.
- \* Option B is incorrect - trusted certificates are not tied to agent authentication.
- \* Option C is unnecessary - reinstalling the agent does not reset credentials.
- \* Option D is correct - downloading a new agent.properties file re-secures the agent.
