

Buy Actual4Cert WGU Managing-Cloud-Security Questions Now And Get Free Updates

WGU D320 Pre- Assessment (Latest Update) Managing Cloud Security | Qs & As| Grade A| 100% Correct (Verified Answers)

Q: An organization implemented an information rights management (IRM) solution to prevent critical data from being copied without permission and a cloud backup solution to ensure that the critical data is protected from storage failures. Which IRM challenge will the organization need to address?

Jurisdictional conflicts
Agent conflicts
Replication restrictions
Execution restrictions

ANSWER:
Replication restrictions

Q: A data center engineer is tasked with the destruction of data on solid-state drives (SSDs). The engineer must ensure that the data is not able to be retrieved. Which data destruction action should the engineer take to meet this goal?

Overwriting
Crypto-shredding
Wiping
Degaussing

ANSWER:
Crypto-shredding

Q: An organization wants to gather and interpret logs from its cloud environment. Which system should the organization use for this task?

Our Managing-Cloud-Security exam prep is elaborately compiled and highly efficiently, it will cost you less time and energy, because we shouldn't waste our money on some unless things. The passing rate and the hit rate are also very high, there are thousands of candidates choose to trust our Managing-Cloud-Security Guide Torrent and they have passed the exam. We provide with candidate so many guarantees that they can purchase our study materials no worries. The Managing-Cloud-Security exam prep we provide can help you realize your dream to pass exam and then own a Managing-Cloud-Security exam torrent.

Actual4Cert makes your Managing-Cloud-Security exam preparation easy with its various quality features. Our Managing-Cloud-Security exam braindumps come with 100% passing and refund guarantee. Actual4Cert is dedicated to your accomplishment, hence assures you successful in Managing-Cloud-Security Certification exam on the first try. If for any reason, a candidate fails in Managing-Cloud-Security exam then he will be refunded his money after the refund process. Also, we offer one year free updates to our Managing-Cloud-Security Exam esteemed user, these updates are applicable to your account right from the date of purchase. 24/7 customer support is favorable to candidates who can email us if they find any ambiguity in the Managing-Cloud-Security exam dumps, our support will merely reply to your all WGU Managing Cloud Security (JY02) exam product related queries.

Pass Guaranteed 2026 WGU Managing-Cloud-Security: First-grade WGU Managing Cloud Security (JY02) Dump

Managing-Cloud-Security training materials are compiled by experienced experts, and therefore they cover most knowledge points of the exam, and you can also improve your ability in the process of learning. Managing-Cloud-Security exam dumps not only contain quality but also contain certain quantity, and they will be enough for you to pass the exam and get the certificate. In addition, we are pass guarantee and money back guarantee if you fail to pass the exam. We offer you free update for 365 days after you purchase the Managing-Cloud-Security training materials.

WGU Managing Cloud Security (JY02) Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which characteristic of cloud computing refers to sharing physical assets among multiple customers?

- A. Rapid scalability
- B. Resource pooling
- C. Measured service
- D. On-demand self-service

Answer: B

Explanation:

Resource pooling is one of the core characteristics of cloud computing defined by NIST. It refers to the provider's ability to serve multiple customers by dynamically allocating and reallocating computing resources such as storage, processing, memory, and network bandwidth. These resources are abstracted using virtualization, ensuring that customers remain isolated from one another even though they share the same physical assets.

Rapid scalability describes elasticity, on-demand self-service allows users to provision resources without provider intervention, and measured service refers to metering usage. None of these concepts directly describe the multi-tenant model of shared resources.

Resource pooling improves efficiency, reduces costs, and provides flexibility, but it also introduces new security considerations such as data isolation and hypervisor security. Customers must ensure that providers implement strong controls to prevent data leakage or cross-tenant compromise.

NEW QUESTION # 21

An organization is considering a cloud provider that has multivendor pathway connectivity. What does this feature provide?

- A. Contracts with heating, ventilation, and air conditioning (HVAC) providers
- B. Contracts with fuel providers
- C. Connections to several electric providers that are not on the same grid
- D. Connections to several internet service providers

Answer: D

Explanation:

Multivendor pathway connectivity refers to a cloud provider's ability to maintain connections with multiple internet service providers (ISPs). This ensures redundancy and reduces the risk of outages due to a single ISP failure.

Electric providers, fuel vendors, and HVAC contracts support facility resilience, but they are not directly tied to connectivity. The purpose of multivendor pathways is specifically to guarantee uninterrupted network access and resilience for customer workloads. By maintaining ISP redundancy, cloud providers improve availability and meet SLA commitments. This capability is especially critical for enterprises requiring high uptime or operating in regions where connectivity disruptions are common. It also provides flexibility in bandwidth management and routing optimization.

NEW QUESTION # 22

An organization's security architects determined that all authentication and authorization requests need to be validated before any employee can access corporate resources. Because of this, the organization needs to implement a system that stores and manages the employees' credential information and then validates any requests sent. Which system would allow the organization to meet the architects' requirements?

- A. Identity provider (IdP)

- B. Zero trust
- C. Bastion host
- D. Hardware security module (HSM)

Answer: A

Explanation:

An Identity Provider (IdP) is a system that stores and manages identity information and validates authentication and authorization requests. IdPs are critical in cloud and hybrid environments, supporting protocols such as SAML, OAuth, and OpenID Connect for federated access.

An HSM manages encryption keys, not identities. Zero Trust is a security philosophy requiring continuous verification, but the system that enforces authentication is the IdP. A bastion host provides secure administrative access but does not manage identity. By using an IdP, organizations centralize credential management, enforce multifactor authentication, and integrate with Single Sign-On (SSO). This reduces password fatigue, increases security, and ensures consistent access control policies across applications and services.

NEW QUESTION # 23

As part of training to help the data center engineers understand different attack vectors that affect the infrastructure, they work on a set of information about access and availability attacks that was presented. Part of the labs requires the engineers to identify different threat vectors and their names. Which threat prohibits the use of data by preventing access to it?

- A. Denial of service
- B. Rainbow tables
- C. Encryption
- D. Brute force

Answer: A

Explanation:

The described threat is a Denial of Service (DoS) attack. In security contexts, a DoS attack aims to make a system, application, or data unavailable to legitimate users by overwhelming resources. Unlike brute force or rainbow table attacks, which target authentication mechanisms, or encryption, which is a defensive control, DoS focuses on disrupting availability—the "A" in the Confidentiality, Integrity, Availability (CIA) triad.

DoS can be executed in many ways: flooding a network with traffic, exhausting server memory, or overwhelming application processes. When scaled by multiple coordinated systems, it becomes a Distributed Denial of Service (DDoS) attack. In either case, the effect is the same—authorized users cannot access critical data or services.

For cloud environments, where service uptime is crucial, DoS protections such as rate limiting, auto-scaling, and upstream filtering are essential. Training data center engineers to recognize DoS helps them understand the importance of resilience strategies and ensures continuity planning includes availability safeguards.

NEW QUESTION # 24

Which platform component includes containers and storage?

- A. Networking
- B. Security
- C. Compute
- D. Monitoring

Answer: C

Explanation:

The compute component of a cloud platform encompasses resources used to run workloads, including containers, virtual machines, and storage tied directly to those workloads. Compute services are the foundation of cloud infrastructure, enabling execution of applications and management of data.

Security, monitoring, and networking are supporting components but do not include execution environments.

Compute resources scale elastically, allowing organizations to match demand and optimize cost.

By combining containers and storage within compute, cloud platforms allow rapid deployment, portability, and isolation of applications. This component underpins modern architectures like Kubernetes and serverless computing, providing agility and efficiency.

NEW QUESTION # 25

.....

If you keep delivering, your company will give you more opportunity and more money to manage. I don't think you will be a clerk forever. You must do your best to pass IT certification and to be elevated people. Actual4Cert WGU Managing-Cloud-Security practice test will help you to open the door to the success. You can download pdf real questions and answers. What's more, you can also refer to our free demo. More and more IT people have taken action to purchase our WGU Managing-Cloud-Security test. 100% guarantee to pass Managing-Cloud-Security test. I think you will not miss it.

Managing-Cloud-Security Exam Prep: <https://www.actual4cert.com/Managing-Cloud-Security-real-questions.html>

WGU Managing-Cloud-Security Dump Although we cannot change the world, we can change our own destiny, Our Managing-Cloud-Security dumps torrent will do you a big favor of solving all your problems and offering the most convenient and efficient approaches to make it, Are you still looking for Managing-Cloud-Security exam materials, WGU Managing-Cloud-Security Dump As a worker, how can you stand out in the crowd?

And with the aid of our WGU Managing Cloud Security (JY02) Managing-Cloud-Security exam preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible.

Its intention is to explain to the reader newly encountered programming Managing-Cloud-Security elements and idioms found in working code, Although we cannot change the world, we can change our own destiny.

WGU Managing-Cloud-Security Web-Based Practice Exam Software

Our Managing-Cloud-Security dumps torrent will do you a big favor of solving all your problems and offering the most convenient and efficient approaches to make it, Are you still looking for Managing-Cloud-Security exam materials?

As a worker, how can you stand out in the crowd, Choosing our Managing-Cloud-Security last study vce, you will never be regret.
