

CEDP Prüfungsaufgaben - CEDP Schulungsunterlagen

CEDP - Certified Emergency Disaster Professional Practice Exam With Correct Solutions.

What agency would help disaster victims replace their U.S. Savings Bonds lost in a Disaster? - Answer Bureau of Public Debt

What aspects of emergency management would reduce hazard risk the most? - Answer Mitigation

Disaster mass evacuation is identified/addressed in which of the following documents? - Answer NRF

International financial institutions are reluctant to fund what emergency management phase? - Answer Response

What statement describes the philosophy shift that contributed to U.S. transition from a National Response Plan to a National Response Framework? - Answer Need for a more unified national response effort from all government levels

During a disaster, which response indicates a topic not falling under the objectives of Protection of Natural and Cultural Resources and Historic Properties? - Answer Assessment of privately constructed dams

What is not a level of emergency planning as defined by FEMA? - Answer Contingency

What statement best describes "Situational Awareness" - Answer Integrating information from several sources for making decisions

What statement about carbon monoxide is accurate? - Answer Exposure can inhibit the blood from carrying oxygen to the brain

What publication provides guidelines for developing an EOP? - Answer CPG 101

What entity provides current hazardous material information to emergency personnel responding to a highway transportation accident with a chemical release? - Answer Chemical Transportation Emergency Center

What does the DHS Secretary use for guide development of standards, guidelines, and compliance protocols for determining state or local government compliance with NIMS? - Answer National Response Framework

What agency provides communication support to the healthcare sector during a major disaster? - Answer Federal Communications Commission

What action would be a key to success for conducting a planning session? - Answer Ensuring the group process functions efficiently and effectively

Die IBFCSM CEDP Zertifizierungsprüfung ist heutzutage sehr beliebt. EchteFrage wird Ihnen helfen, die CEDP Prüfung zu bestehen, und bietet Ihnen einen einjährigen kostenlosen Update-Service. Dann wählen Sie doch EchteFrage, um Ihren Traum zu verwirklichen. Um Erfolg zu erringen, ist Ihnen weise, EchteFrage zu wählen. Wählen Sie EchteFrage, Sie werden der nächste IT-Elite sein.

Man sollte die verlässliche Firma auswählen, wenn man etwas kaufen will. Was wir EchteFrage Ihnen garantieren können sind: zuerst, die höchste Bestehensquote der IBFCSM CEDP Prüfung, die Probe mit kostenfreier Demo der IBFCSM CEDP sowie der einjährige kostenlose Aktualisierungsdienst. Um mehr Ihre Sorgen zu entschlagen, garantieren wir noch, falls Sie die IBFCSM CEDP Prüfung leider nicht bestehen, geben wir Ihnen alle Ihre bezahlte Gebühren zurück. EchteFrage----Ihr bester Partner bei Ihrer Vorbereitung der IBFCSM CEDP!

>> CEDP Prüfungsaufgaben <<

Hohe Qualität von CEDP Prüfung und Antworten

Die IBFCSM Zertifizierungsprüfung ist jetzt eine sehr populäre Prüfung. Haben Sie diese IBFCSM CEDP Zertifizierung abgelegt? Wenn nein, sollen Sie bitte schneller etwas machen. Es ist sehr wichtig für Sie, diese wichtige Zertifizierung zu besitzen. Wie IBFCSM CEDP Zertifizierungsprüfung hocheffektiv vorzubereiten und nur einmal die IBFCSM CEDP Prüfung zu bestehen spielt

heute eine sehr übergreifende Rolle.

IBFCSM Certified Emergency and Disaster Professional CEDP Prüfungsfragen mit Lösungen (Q91-Q96):

91. Frage

What location experiences the highest number of hazardous material releases with threats to the environment?

- **A. Roads and highways**
- B. Railway systems
- C. Navigable waterways

Antwort: A

Begründung:

Statistically, according to data from the Pipeline and Hazardous Materials Safety Administration (PHMSA) and the National Response Center (NRC), the vast majority of hazardous material (HazMat) incidents occur on Roads and Highways (Option A). While railway accidents (Option C) like the East Palestine derailment or maritime spills in waterways (Option B) are often more catastrophic and receive more media attention, the sheer volume of HazMat transported by truck leads to a much higher frequency of smaller, yet environmentally threatening, releases.

Highways are prone to frequent incidents due to the high density of traffic, driver fatigue, weather conditions, and the "door-to-door" nature of trucking which involves navigating narrow local streets not designed for large tankers. Every day, thousands of trucks carry flammable liquids, corrosive acids, and toxic gases. Even a minor "fender bender" involving a commercial vehicle can result in a punctured fuel tank or a valve leak, leading to soil and groundwater contamination.

In the CEDP framework, understanding the "transient nature" of highway hazards is critical. Unlike a fixed facility (like a chemical plant), a highway release can happen anywhere, often in areas far from specialized HazMat response teams. This high frequency of incidents requires local first responders to have a high level of Awareness and Operations level training under HAZWOPER standards.

While rail and water transport move larger quantities of hazardous goods per shipment, the "incident-per-mile" rate is significantly higher for road transport, making it the primary focus for transportation-related emergency planning and environmental protection efforts.

92. Frage

What purpose does the Remedial Action Management Program (RAMP) serve?

- A. Provides guidance on threat assessments and corrections
- **B. Identifies lessons learned and intelligent/smart practices**
- C. Evaluates effectiveness of resilience/community involvement

Antwort: B

Begründung:

The Remedial Action Management Program (RAMP) is a key component of the National Preparedness System and the National Incident Management System (NIMS). Its primary mission is to identify, document, and share lessons learned and best practices (often referred to in technical documents as "intelligent" or "smart" practices) derived from real-world incidents, exercises, and disasters. Managed by the National Preparedness Directorate within FEMA, RAMP provides a standardized, systemic method for handling the transition from

"lessons identified" in After-Action Reports (AARs) to "lessons learned" through the implementation of corrective actions.

According to the FEMA RAMP doctrine, the program operates as an "information warehouse" for the entire emergency management community. By analyzing the outcomes of multiple events, RAMP can identify recurring systemic issues—such as gaps in interoperable communications or resource request delays—and elevate them to program managers or senior leadership for resolution. This prevents jurisdictions from "re-inventing the wheel" after every disaster. A "best practice" in this context is defined as an innovative or unconventional course of action that proved particularly effective and should be repeated in similar circumstances.

For a Certified Emergency and Disaster Professional (CEDP), the RAMP framework is essential for the Continuous Improvement (CI) cycle. It ensures that the evaluation phase of a disaster is not just a static document but an active management process. By integrating with the Lessons Learned Information Sharing (LLIS) system, RAMP allows disaster professionals to access a nationwide network of peer-validated insights.

This ensures that the collective wisdom of the emergency management enterprise is captured and used to update training, policy, and equipment standards, ultimately increasing the speed and efficiency of future disaster response efforts across all levels of government.

93. Frage

Disaster responder safety and health capabilities fall under what oversight entity?

- A. FEMA
- B. ASPR
- C. DHS

Antwort: A

Begründung:

In the national preparedness architecture, Responder Safety and Health is officially designated as one of the 32 Core Capabilities within the FEMA National Preparedness Goal. While the Department of Homeland Security (DHS) (Option B) provides the overarching policy umbrella, the actual management, training, and operational oversight of these capabilities for the disaster workforce fall under FEMA. This includes the development of safety protocols for the 15 Emergency Support Functions (ESFs) and the specialized training provided at the Center for Domestic Preparedness (CDP) and the Emergency Management Institute (EMI).

The "Responder Safety and Health" capability focuses on protecting emergency responders from the myriad of physical, chemical, and psychological hazards present in a disaster zone. FEMA coordinates with agencies like NIOSH and OSHA to ensure that responders are equipped with the correct Personal Protective Equipment (PPE), have access to health monitoring (such as the Medical Monitoring and Surveillance or MMS programs), and receive the necessary immunizations and post-incident mental health support.

For the CEDP professional, this FEMA-led capability is the "Shield" for the responders. It ensures that the mission does not create more victims from within the response ranks. In a catastrophic event, such as a major structural collapse or a CBRN release, FEMA's Safety Officers are responsible for establishing the safety zones and enforcing the "Stay Time" limits. By placing this capability under the same entity that manages the Incident Command System (ICS), the federal government ensures that safety is integrated into every level of command. This oversight ensures that the response force remains viable and healthy throughout the duration of a prolonged disaster, fulfilling the core principle of "Responder Safety First" that is a prerequisite for any successful mission.

94. Frage

What agency developed the Standardized Hospital Bed Definitions for use in public health emergencies?

- A. Agency for Healthcare Research and Quality
- B. Food and Drug Administration
- C. Centers for Medicare and Medicaid Services

Antwort: A

Begründung:

The Agency for Healthcare Research and Quality (AHRQ), a division of the Department of Health and Human Services (HHS), developed the Standardized Hospital Bed Definitions to provide a uniform language for medical surge capacity. During a public health emergency, such as a pandemic or a mass casualty incident, it is vital for emergency managers to know exactly how many and what type of beds are available. Prior to this standardization, one hospital might define an "available bed" as a physical mattress, while another might only count it if there was a dedicated nurse available to staff it.

The AHRQ definitions categorize beds based on the level of care they can support—such as Intensive Care (ICU), Medical/Surgical, Burn, Pediatric, and Psychiatric. These standardized metrics allow for accurate "HAvBED" (Hospital Available Beds for Emergencies and Disasters) reporting via the National Healthcare Preparedness Program. While the CMS (Option C) regulates hospital participation and reimbursement, and the FDA (Option A) regulates medical devices, it was the research-driven mandate of the AHRQ that created the specific definitions used in disaster planning.

For a Certified Emergency and Disaster Professional (CEDP) working in a healthcare environment, these definitions are critical for calculating "surge capacity." If an Emergency Operations Center (EOC) receives a report of "50 available beds," they must know if those are ICU-capable beds for critical patients or general ward beds. This clarity prevents the misallocation of patients and ensures that the most critically injured individuals are sent to facilities with the appropriate level of care. These standards also assist in the request for federal assets, such as the National Disaster Medical System (NDMS), by providing a clear picture of local facility saturation.

95. Frage

What supply chain issue would be a low priority after emergency response activities begin?

- A. Supply risk assessments

- B. Interfacing functions
- C. Controlling inventory

Antwort: A

Begründung:

In the lifecycle of emergency management, different tasks are prioritized based on the current phase of the incident. Supply risk assessments (Option B) are a "Steady State" or Preparedness activity. They involve the proactive analysis of vulnerabilities in the supply chain, such as identifying single-source suppliers or geographically concentrated warehouses, before a disaster occurs. Once emergency response activities begin (the "Response" phase), the time for assessment has passed; the focus must shift immediately to the tactical execution of the supply chain.

During an active response, Controlling inventory (Option A) is a high priority. Emergency managers must know exactly what supplies (water, food, medicine, fuel) are currently on hand, where they are located, and how fast they are being consumed (the "Burn Rate"). Failure to control inventory leads to critical shortages or wasteful surpluses. Similarly, Interfacing functions (Option C) are vital during response. This involves the coordination between the Logistics Section, the Finance Section, and external vendors to ensure that resource orders are placed, tracked, and delivered to the correct Incident Command Posts.

According to FEMA's Logistics Management Manual, the transition from "Planning" to "Operations" requires a shift from analytical thinking to action-oriented management. A supply risk assessment conducted during a hurricane response would be an inefficient use of personnel who should be focused on the "Last Mile" delivery of life-saving commodities. For a CEDP professional, understanding this shift is critical for effective Incident Action Planning. While the risk assessment is the foundation that informs the initial stock levels and vendor contracts, it becomes a "static" document once the first 911 call is made. The operational period requires dynamic oversight of the physical flow of goods, making the analytical assessment the lowest priority until the "Recovery" or "Post-Incident" phase begins, at which point the assessment is updated with new lessons learned.
