

New Analytics-Admn-201 Test Simulator, Free Analytics-Admn-201 Braindumps

P.S. Free 2026 Salesforce Analytics-Admn-201 dumps are available on Google Drive shared by Prep4sureGuide:
https://drive.google.com/open?id=1UadLGR_ow2ShI13ukHkT0wcO5VU-0H8

For candidates who have little time to prepare for the exam, buying high-quality Analytics-Admn-201 exam materials is quite necessary. With the experienced professionals to edit, Analytics-Admn-201 exam materials of us are high-quality, and they will help you pass the exam and get the certificate just one time. You just need to spend about 48 to 72 hours on practicing, and you can pass the exam. We also pass guarantee and money back guarantee if you fail to pass the exam. We provide you with free update for 365 days if you purchase Analytics-Admn-201 Exam Materials from us.

With the best quality and high accuracy, our Analytics-Admn-201 vce braindumps are the best study materials for the certification exam among the dumps vendors. Our experts constantly keep the pace of the current exam requirement for Analytics-Admn-201 Actual Test to ensure the accuracy of our questions. The pass rate of our Analytics-Admn-201 exam dumps almost reach to 98% because our questions and answers always updated according to the latest exam information.

Analytics-Admn-201 Exam Torrent and Salesforce Certified Tableau Server Administrator Exam Preparation - Analytics-Admn-201 Guide Dumps - Prep4sureGuide

We are steely to be the first-rank Analytics-Admn-201 practice materials in this area. On your way to success, we are the strong backups you can depend on. We have confidence that your career will be in the ascendant with the passing certificate of the Analytics-Admn-201 Study Guide as a beginning. With the unbeatable high pass rate as 98% to 100%, no one can do this job better than us to help you pass the Analytics-Admn-201 exam. Just give you a chance to success!

Salesforce Certified Tableau Server Administrator Sample Questions (Q53-Q58):

NEW QUESTION # 53

What event is most likely to cause problems for a Tableau Server?

- A. Separating the Backgrounder and VizQL processes to different machines
- **B. Running additional software on the server**
- C. Using a non-default installation path
- D. Configuring the server to use a static IP address

Answer: B

Explanation:

Tableau Server's performance and stability depend on dedicated resources and proper configuration. Running additional software on the same server is the most likely to cause problems because:

- * Resource contention: Tableau Server requires significant CPU, RAM, and disk I/O. Other software (e.g., databases, web servers) can compete for these resources, leading to slowdowns, crashes, or failed tasks.
- * Port conflicts: Tableau uses specific ports (e.g., 80, 443, 8850), and other applications might interfere.
- * Security risks: Additional software increases the attack surface, potentially compromising Tableau Server. Tableau recommends running the server on dedicated hardware without unrelated applications.

* Option A (Running additional software on the server): Correct. This is a common cause of performance issues and is explicitly discouraged in Tableau's best practices.

* Option B (Separating the Backgrounder and VizQL processes to different machines): Incorrect.

This is a supported multi-node configuration that can improve performance, not cause problems, if properly set up via TSM.

* Option C (Configuring the server to use a static IP address): Incorrect. A static IP is recommended for Tableau Server to ensure consistent network access, so it's unlikely to cause issues.

* Option D (Using a non-default installation path): Incorrect. While not default, a custom path is supported (via TSM or installer options) and unlikely to cause problems if permissions and disk space are adequate.

Reference: Tableau Server Documentation - "Best Practices for Installation" (https://help.tableau.com/current/server/en-us/install_best_practices.htm).

NEW QUESTION # 54

Which two options can be configured by a server administrator per site? (Choose two.)

- A. Limitation on number of users
- B. Ability to embed credentials
- **C. Language and locale**
- **D. Limitation on storage space**

Answer: C,D

Explanation:

Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:

* Site Settings: Found in the web UI under Site > Settings > General. Server admins can override site admin settings.

* Option B (Limitation on storage space): Correct.

* Details: Server admins can set a storage quota per site (e.g., 100 GB) to cap disk usage for extracts and workbooks.

* How: In TSM or site settings (if enabled)-e.g., `tsm configuration set -k site.storage.quota -v 100000`.

* Impact: Prevents one site from monopolizing resources in multi-site deployments.

* Option D (Language and locale): Correct.

* Details: Each site can set its language (e.g., English, French) and locale (e.g., date/number formats).

* How: Site settings UI-e.g., "Language: French, Locale: France."

* Impact: Tailors the user experience per site's audience.

* Option A (Ability to embed credentials): Incorrect.

* Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.

* Option C (Limitation on number of users): Incorrect.

* Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.

Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.
Reference: Tableau Server Documentation - "Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

NEW QUESTION # 55

What are two intervals when Tableau Server verifies if data conditions for data-driven alerts are true? (Choose two.)

- A. Every 60 minutes
- B. Whenever a new extract is published
- C. Whenever extracts in the related workbook are refreshed
- D. Every 10 minutes

Answer: A,C

Explanation:

Data-driven alerts notify users when data meets conditions (e.g., sales > \$10K). Let's examine when Tableau checks these:

* Alert Mechanics:

* Enabled per site (Settings > General > Data-Driven Alerts).

* Backgrounder evaluates conditions against extract data.

* Check Intervals: Configurable via tsm configuration set -k dataAlerts.checkIntervalInMinutes (default: 60 minutes).

* Refresh Trigger: Also checks post-extract refresh for immediate updates.

* Option A (Every 60 minutes): Correct.

* Details: Default interval-Backgrounder polls every hour to evaluate alert conditions.

* Config: Adjustable (e.g., -v 30 for 30 minutes).

* Option D (Whenever extracts in the related workbook are refreshed): Correct.

* Details: An extract refresh updates the data, triggering an immediate alert check to catch changes promptly.

* Why: Ensures timely notifications without waiting for the next poll.

* Option B (Every 10 minutes): Incorrect.

* Why: Not the default-possible via config, but not standard.

* Option C (Whenever a new extract is published): Incorrect.

* Why: Publishing creates the extract; alerts trigger on refreshes or polling, not initial publication.

Why This Matters: Timing affects alert responsiveness-balancing frequency and server load is key.

Reference: Tableau Server Documentation - "Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

NEW QUESTION # 56

You need to verify the status of the Coordination Service ensemble in a high-availability (HA) Tableau Server cluster. What should you do?

- A. Examine the Tableau Services Manager (TSM) web client Status page
- B. Run the command `tsm maintenance ziplogs`
- C. Run the command `tsm status -v`
- D. Examine the Tableau Server Status page

Answer: C

Explanation:

In an HA Tableau Server cluster, the Coordination Service (ZooKeeper ensemble) maintains cluster state- let's find the best way to check it:

* Coordination Service:

* Runs on multiple nodes (3 or 5 in HA) to ensure quorum and failover.

* Status indicates if it's running and synced-critical for cluster health.

* Option C (Run `tsm status -v`): Correct.

* Details: `tsm status --verbose` lists all processes across nodes, including Coordination Service (e.g., "Coordination Service: RUNNING").

* Why Best: Provides detailed, node-specific status in the CLI-e.g., "Node 1: RUNNING, Node 2: RUNNING."

* Use: Run on the initial node; -v ensures full output.

* Option A (TSM web client Status page): Incorrect.

* Why: The TSM UI (Server > Status) shows process counts (e.g., "Coordination Service: 3 instances"), but not detailed per-node

status-less granular than CLI.

* Option B (tsm maintenance ziplogs): Incorrect.

* Why: Generates log archives for troubleshooting, not a real-time status check.

* Option D (Tableau Server Status page): Incorrect.

* Why: The Server Status page (Server > Status in the web UI) monitors application processes (e.g., VizQL), not TSM's Coordination Service.

Why This Matters: Coordination Service health ensures HA stability-tsm status -v is the admin's go-to for precision.

Reference: Tableau Server Documentation - "Check Server Status" (https://help.tableau.com/current/server/en-us/tsm_status.htm).

NEW QUESTION # 57

What should you do to disable table recommendations for popular data sources and tables to users?

- A. Publish data sources only to projects with permissions locked to the project
- B. Use the command: tsm configuration set -k recommendations.enabled -v false
- C. Disable the option using the server Settings page
- **D. Disable the option using the site Settings page**

Answer: D

Explanation:

Table recommendations in Tableau Server suggest popular tables and data sources to users when they create new content in the web authoring environment. This feature is enabled by default but can be disabled at the site level.

Option A (Disable the option using the site Settings page): Correct. A site administrator can disable table recommendations by navigating to the site's Settings > General page in the Tableau Server web interface and unchecking the option "Enable table recommendations." This prevents users on that site from seeing these suggestions, offering a straightforward UI-based solution.

Option B (Use the command: tsm configuration set -k recommendations.enabled -v false): Incorrect. There is no recommendations.enabled key in the TSM configuration settings. This feature is managed per site, not server-wide via TSM.

Option C (Publish data sources only to projects with permissions locked): Incorrect. Locking permissions restricts access but doesn't disable the recommendation feature itself. Users with access would still see recommendations.

Option D (Disable the option using the server Settings page): Incorrect. Table recommendations are a site-specific setting, not a server-wide setting. The server Settings page (via TSM) controls global configurations, not this feature.

Reference: Tableau Server Documentation - "Manage Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

NEW QUESTION # 58

.....

Our Analytics-Admn-201 guide torrent is compiled by experts and approved by the experienced professionals. The language is easy to be understood to make any learners have no learning obstacles and our Analytics-Admn-201 study questions are suitable for any learners. The software boosts varied self-learning and self-assessment functions to check the results of the learning. The software can help the learners find the weak links and deal with them. Our Analytics-Admn-201 Exam Torrent boosts timing function and the function to stimulate the exam. It is very easy to pass the Analytics-Admn-201 exam with our Analytics-Admn-201 learning guide.
