Detailed Salesforce Manufacturing-Cloud-Professional Study Plan | Latest Manufacturing-Cloud-Professional Exam Notes

Besides Salesforce Manufacturing-Cloud-Professional exam is popular, Cisco, IBM, HP and so on are also accepted by many people. If you want to get Manufacturing-Cloud-Professional certificate, PassSureExam dumps can help you to realize your dream. Not having confidence to pass the exam, you give up taking the exam. You can absolutely achieve your goal by PassSureExam test dumps. After you obtain Manufacturing-Cloud-Professional certificate, you can also attend other certification exams in IT industry. PassSureExam questions and answers are at your hand, all exams are not a problem.

Salesforce Manufacturing Cloud Accredited Professional Exam Sample Questions (Q129-Q134):

NEW QUESTION # 129
A new custom field is created on the Account Product Forecast (APF) Table. Account Managers have already been assigned the standard Manufacturing Account Forecast permission set.
Which two actions can be taken to give the Account Managers 'Read" access to this new field?

- A. Clone the standard permission set Account Forecast to a new permission set with license type 'Salesforce. Grant 'Read' access to the field on the new permission set. Assign the cloned permission set to the Account Managers
- B. Clone the standard permission set Manufacturing Account Forecast to a new permission set with license type Manufacturing Forecast Psl. Grant Read access to the field on the new permission set. Assign the cloned permission set to the Account Managers.

- C. Create a new custom permission set of license type Salesforce'. Grant Read access to the field. Assign the newly created permission set to the Account Managers
- D. Give 'Read' access to the field on the standard Manufacturing Account Forecast' permission set.

Answer: B,D

Explanation:
= These two actions can be taken to give the Account Managers 'Read' access to the new custom field on the APF Table. The first action involves cloning the existing permission set that already grants access to the APF Table and its standard fields, and then modifying the cloned permission set to include the new custom field. The second action involves editing the existing permission set directly to add the new custom field. Both actions require the same license type, which is Manufacturing Forecast Psl, to access the APF Table. The other two actions are not valid because they use a different license type, which is Salesforce, that does not support the APF Table. NEW QUESTION # 130
Which three options can be defined by an Admin in the Setup area in Account Manager Targets?

- A. Team Member Hierarchy
- B. Target Measure Type
- C. Distribution Frequency
- D. Default Currency
- E. Price Book

Answer: A,B,C

Explanation:
Account Manager Targets is a feature of Manufacturing Cloud that allows you to set up and manage sales goals and track performance for your account managers and their teams. To use this feature, you need to enable it in Setup and define some settings that affect how targets are created, assigned, and distributed. The three options that can be defined by an admin in the Setup area in Account Manager Targets are:
* Target Measure Type: This is the unit of measurement for the targets, such as revenue, volume, or any custom measure. You can define up to three target measure types for your org and assign them to different target types. For example, you can have a target type for revenue and another one for volume, and use different target measure types for each one.
* Team Member Hierarchy: This is the hierarchy that determines how targets are rolled up from individual account managers to their managers and so on. You can use the standard User Role hierarchy or a custom hierarchy based on a custom object. The hierarchy affects how targets are distributed, aggregated, and reported.
* Distribution Frequency: This is the frequency at which targets are distributed from parent targets to child targets. You can choose from monthly, quarterly, or yearly distribution. The distribution frequency affects how targets are calculated and displayed for different time periods.

NEW QUESTION # 131
When discussing the business requirements for a Manufacturing Cloud implementation design, what is a consideration when analyzing data in existing third-party systems?

- A. Define current processes required by the business.
- B. Identify the capabilities of different data integration tools.
- C. Determine the system of record for each data category required by the business.

Answer: C

Explanation:
Explanation
When designing a Manufacturing Cloud implementation, it is important to consider the data sources and quality of the existing third-party systems that will be integrated with Manufacturing Cloud. One of the key considerations is to determine the system of record for each data category required by the business, such as customer information, product data, order history, inventory levels, and so

on. The system of record is the authoritative source of data that is trusted and maintained by the business. By identifying the system of record for each data category, you can ensure data consistency, accuracy, and integrity across the integrated systems.

You can also avoid data duplication, conflicts, and errors that may arise from having multiple sources of data for the same category.

NEW QUESTION # 132

Which Calculation Method can calculate a benefit structure on a total quantity of 150 units, where the first 100 units earn $0 per unit and the next 50 units earn $10 per unit?

- A. Stepped
- B. Elapsed
- C. Aggregate
- D. Specified

Answer: A

Explanation:
Explanation

n: A stepped calculation method calculates a benefit structure based on the quantity of units sold within a specified range. For example, if you sell 150 units, and the first 100 units earn $0 per unit and the next 50 units earn $10 per unit, the total benefit is $500. This is different from the other calculation methods, which are:

Specified: Calculates a benefit structure based on a fixed amount or percentage for each unit sold.

Elapsed: Calculates a benefit structure based on the time elapsed since the start of the sales agreement.

Aggregate: Calculates a benefit structure based on the total quantity of units sold across all products in the sales agreement.

NEW QUESTION # 133

A custom metric for display on Agreement Terms is needed based on the business requirements. Custom fields and mappings are required between the custom fields of the Sales Agreement Product and Sales Agreement Product Schedule objects.

What should an administrator consider while designing for this requirement?

- A. Only number, percent, and currency field types are available for mapping.
- B. Only number, formula, and value field types are available for mapping.
- C. Only number, currency, and formula field types are available for mapping.

Answer: C

Explanation:
Explanation

To create a custom metric for display on Agreement Terms, you need to create custom fields on the Sales Agreement Product and Sales Agreement Product Schedule objects, and map them using the Data.com Administration tool. The custom fields must have the same data type as the default fields, and only number, currency, and formula field types are available for mapping. Therefore, the correct answer is C. Only number, currency, and formula field types are available for mapping. References: Customize Salesforce Field Mappings, Create Custom Fields for Sales Agreement Products and Schedules

NEW QUESTION # 134

......

With the development of the electronic equipment, there are a lot of changes in the designs of our Manufacturing-Cloud-Professional pass-sure torrent.
