Palo Alto Networks XSOAR Engineer Sample Questions (Q167-Q172):

NEW QUESTION # 167

What will happen if a playbook debugger is left running for more than 24 hours?

- **A. By default, the system closes automatically any debugger session that have been open 180 minutes.**
- B. The session will be running till stopped manually by administrator.
- C. By default, every 24 hours, the system closes any debugger sessions that have been open for more than 180 minutes.
- D. The session must be stopped during 180 minutes manually by administrator, user will receive notification automatically.

Answer: A

NEW QUESTION # 168

What is the difference between labels and fields?

- **A. Labels can be used in queries and fields cannot**
- B. Fields are indexed in the database and labels are not
- C. Fields can be used in playbooks and labels cannot
- D. Labels are indexed in the database and fields are not

Answer: A

NEW QUESTION # 169

Where is a custom layout for an incident configured?.

- **A. Incident type.**
- B. Pre-process rule.
- C. Integration instance settings.
- D. Incident playbook.

Answer: A

NEW QUESTION # 170

What is the default landing page for a new user in XSOAR?

- A. Settings
- B. Threat Intel
- C. Marketplace
- **D. Dashboards**

Answer: D

NEW QUESTION # 171

When re-assigning an existing incident to a new incident type, an engineer is concerned about the preservation of critical data

currently stored in fields that are only associated to the original incident type.

Upon making the change, in which state will the critical data be in the now unassociated fields?.

- A. Hidden from the Context Data but accessible.
- B. Hidden from Context Data and no longer accessible.
- C. Visible with Context Data, grayed out, and fully accessible.
- **D. Visible within Context Data and fully accessible.**

Answer: D

Explanation:

XSOAR separates Context Data from Incident Layout fields. When an incident field is populated, its value is stored in Context, even if the incident type later changes. The Admin Guide clearly states that context is persistent and not dependent on whether a field belongs to the new incident type.

If an incident is reassigned to a different incident type, fields not included in the new type's layout are no longer visible in the UI, but the data is fully retained in Context. Analysts can still retrieve the values through playbooks, scripts, or JSON view. This ensures investigations are not disrupted and historical information is never lost due to schema changes.

The data is not deleted, nor is it hidden from context (ruling out options A and D). It also does not appear grayed out in the UI (C), because the fields no longer appear at all unless re-added to the layout.

Thus, per XSOAR's data retention model, the correct state is B: Visible within Context Data and fully accessible.

NEW QUESTION # 172

.....

With passing rate more than 98 percent from exam candidates who chose our Palo Alto Networks XSOAR-Engineer Study Guide, we have full confidence that your XSOAR-Engineer actual test will be a piece of cake by them. Our Palo Alto Networks XSOAR Engineer exam questions provide with the software which has a variety of self-study and self-assessment functions to detect learning results.
