At what current level does ventricular fibrillation occur?

-60 to 100mA in AC systems

-300 to 500mA in DC systems

What is the LET-GO current threshold?

For a 70kg body

75mA DC

15mA AC

Meter Sockets and meter disconnect switches should be connected on the load side of a service disconnecting means.

FALSE

(NEC Article 230.82)

Which standard addresses equipment grounding?

NFPA 70 (National Electric Code)

A moving iron meter operates by applying _____ current to the coil.

Operating current (can be AC or DC)

NETA_2 Latest Exam Cram, Latest NETA_2 Exam Book

We have gained high appraisal for the high quality NETA_2 guide question and considerate serves. All content is well approved by experts who are arduous and hardworking to offer help. They eliminate banal knowledge and exam questions out of our NETA_2 real materials and add new and essential parts into them. And they also fully analyzed your needs of NETA_2 exam dumps all the time. Our after sales services are also considerate. If you get any questions with our NETA_2 guide question, all helps are available upon request. Once you place your order this time, you will enjoy and experience comfortable and convenient services immediately. Besides, we do not break promise that once you fail the NETA_2 Exam, we will make up to you and relieve you of any loss. Providing with related documents, and we will give your money back. We have been always trying to figure out how to provide warranty service if customers have questions with our NETA_2 real materials. So all operations are conducted to help you pass the exam with efficiency.

NETA Level 2 Certified Assistant Electrical Testing Specialist Sample Questions (Q57-Q62):

NEW QUESTION # 57

Electrical equipment working space must have at least two entrances of sufficient area to permit access.

- A. False unless the room is classified as a confined space
- B. False
- C. True
- D. True only above 600 V

Answer: C

Explanation:

Working space and egress requirements exist to ensure personnel can quickly exit an area in the event of an arc flash, fire, or other emergency. Codes and safety practices commonly require two means of egress (two entrances) when certain conditions are met, particularly when large equipment, high fault current, or certain room layouts increase risk and limit escape paths.

From a NETA Level 2 safety standpoint, the practical takeaway is that equipment rooms must not trap workers. Adequate working clearances and egress routes must be verified as part of safe work planning—especially during commissioning where multiple panels may be open, temporary barriers may exist, and contractors may crowd the space.

While the exact conditions and thresholds can vary by NEC article and equipment rating, the concept tested here matches the flash-card: providing at least two entrances is considered a compliant requirement for safe access to electrical equipment working space in the relevant scenario context.

NEW QUESTION # 58

In a purely inductive circuit, what is the phase relationship between voltage and current?

- A. Voltage and current are in phase
- B. Voltage leads current by 90°
- C. Current leads voltage by 90°
- D. Voltage leads current by 45°

Answer: B

Explanation:

In a purely inductive circuit, current lags voltage by 90 degrees, meaning voltage leads current by 90°. This phase relationship is foundational to understanding AC circuit behavior, protective relay operation, and power factor calculations—all within the expected knowledge scope of a NETA Level 2 technician.

NEW QUESTION # 59

An overcurrent relay is connected to a 200:5 current transformer and has a pickup setting of 4 A secondary. What primary current will cause the relay to operate?

- A. 120 A
- B. 160 A
- C. 80 A
- D. 200 A

Answer: B

Explanation:

A 200:5 CT has a ratio of 40:1. A pickup of 4 A on the secondary corresponds to:

Primary current = $4 \text{ A} \times 40 = 160 \text{ A}$

NETA Level 2 technicians must accurately convert CT secondary values to primary quantities when setting, testing, and verifying protective relays. Incorrect ratio interpretation is a common cause of miscoordination and false conclusions during commissioning.

NEW QUESTION # 60

What is the primary purpose of the National Electrical Code (NEC)?

- A. To standardize electrical testing procedures
- **B. The practical safeguarding of persons and property from electrical hazards**
- C. To establish utility interconnection rules
- D. To regulate electrical worker training

Answer: B

Explanation:

The NEC exists to provide practical safeguards against electrical hazards that can cause injury, fire, or property damage. It is not a design manual, testing standard, or training guide, but a safety code intended to minimize risk through installation requirements. NETA Level 2 technicians must understand that testing and commissioning activities support the NEC's safety intent. Verifying grounding, bonding, overcurrent protection, clearances, and labeling helps ensure installations meet the NEC's fundamental objective of protecting people and property from electrical hazards.

NEW QUESTION # 61

For a Dielectric Absorption Ratio (DAR) test on a transformer, the 1-minute insulation resistance value is divided by the value obtained at:

- **A. 30 seconds**
- B. 45 seconds
- C. 10 minutes
- D. 60 seconds

Answer: A

Explanation:

The Dielectric Absorption Ratio (DAR) is defined as:

$\text{DAR} = \text{IR at 60 seconds} \div \text{IR at 30 seconds}$

This test evaluates insulation quality by observing how resistance increases as polarization effects develop.

NETA Level 2 technicians use DAR testing as a quick diagnostic tool, particularly when full polarization index (PI) testing is not practical.
