CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q217-Q222):

NEW QUESTION # 217

Which of the following facilitates the continuous deployment of cloud applications without performing a clean install on each iteration?

- A. Container image
- B. Version management
- C. Debian package
- D. Bare-metal server

Answer: A

NEW QUESTION # 218

A cloud administrator learns that a major version update, 4.6.0, is available for a business-critical application. The application is currently on version 4.5.2, with additional minor versions 3, 4, and 5 available. The administrator needs to perform the update while minimizing downtime. Which of the following should the administrator do first?

- A. During off hours, decommission the machine and create a new one directly on major update 4.6.0.
- B. Stop the service and apply the major updates directly.
- C. Apply the minor updates and then restart the machine before applying the major update.
- D. Create a test environment and apply the major update

Answer: D

Explanation:

The first step the administrator should take is to create a test environment and apply the major update there. This allows for testing the new version without impacting the production environment, thus minimizing downtime and the potential for unexpected issues.

NEW QUESTION # 219

A group of cloud administrators frequently uses the same deployment template to recreate a cloud-based development environment. The administrators are unable to go back and review the history of changes they have made to the template. Which of the following cloud resource deployment concepts should the administrator start using?

- A. Documentation
- B. Versioning
- C. Drift detection
- D. Repeatability

Answer: B

Explanation:

Versioning is a concept that allows cloud administrators to keep track of the history of changes made to deployment templates or any other configuration file. By using version control systems, they can review previous versions, roll back to earlier configurations if necessary, and understand the evolution of the deployment template over time.

NEW QUESTION # 220

Which of the following is true of SSDs?

- A. SSDs do not have self-encrypting capabilities.
- B. SSDs have small storage capacities.
- C. SSDs can be used for high-IOP applications.
- D. SSDs are used mostly in cold storage.

Answer: C

Explanation:

SSDs (Solid State Drives) are known for their high performance and can handle a high number of input/output operations per second (IOPS). This makes them ideal for applications and workloads that require rapid access to storage, such as databases and

high-performance computing applications. References: CompTIA Cloud+ Study Guide (Exam CV0-004) - Chapter on Cloud Storage Options

NEW QUESTION # 221

Which of the following cloud-native architecture designs is the most easily maintained, decentralized, and decoupled?

- A. Mainframe
- B. Monolithic
- C. **Microservices**
- D. Hybrid cloud

Answer: C

Explanation:

Microservices architecture is a design approach to build a single application as a suite of small services, each running in its own process and communicating with lightweight mechanisms, often an HTTP resource API. This design is decentralized and each service is fully decoupled, allowing for easier maintenance and scaling. Each microservice is built around a specific business capability and can be deployed independently, unlike monolithic architectures that are typically centralized and less flexible.
