AB-900최신 업데이트버전 덤프공부 & AB-900 Vce

IT업계에 종사하는 분이 점점 많아지고 있는 지금 IT인증자격증은 필수품으로 되었습니다. IT인사들의 부담을 덜어드리기 위해 DumpTOP는 Microsoft인증 AB-900인증시험에 대비한 고품질 덤프를 연구제작하였습니다. Microsoft인증 AB-900시험을 준비하려면 많은 정력을 기울여야 하는데 회사의 야근에 시달리면서 시험공부까지 하려면 스트레스가 이만저만이 아니겠죠. DumpTOP 덤프를 구매하시면 이제 그런 고민은 끝입니다. 덤프에 있는 내용만 공부하시면 IT인증자격증 취득은 한방에 가능합니다.

최신 Microsoft 365 Certified AB-900 무료샘플문제 (Q23-Q28):

질문 # 23

You need to create a Microsoft 365 Copilot agent that can create charts and visualizations based on a Microsoft Excel workbook. What should you configure for the agent?

- A. the image generator capability
- B. the code interpreter capability
- C. the Customer Insights Assistant template
- D. the Scrum Assistant template

정답: B

설명:

The correct answer is C. the code interpreter capability . Microsoft Learn states that the code interpreter capability for Microsoft 365 Copilot declarative agents allows the agent to generate and execute Python code to analyze data and generate visualizations . Microsoft's agent schema documentation explicitly describes Code Interpreter as a capability used to solve complex math problems, analyze data, and generate visualizations. That directly matches the requirement to create charts and visualizations from a Microsoft Excel workbook .

Microsoft documentation also explains that code interpreter supports working with Excel files and is used for scenarios such as data analysis , statistical computations , and generating charts . This makes it the correct configuration for an agent that must reason over workbook data and produce chart-based outputs. By contrast, the image generator capability is for creating images, not for analyzing workbook data. The Scrum Assistant and Customer Insights Assistant options are templates, not the specific technical capability required to read data and build charts from an Excel workbook.

질문 # 24

Hotspot Question

Select the answer that correctly completes the sentence.

Answer Area

Conditional Access policies

are configured by using the Microsoft Defender portal.

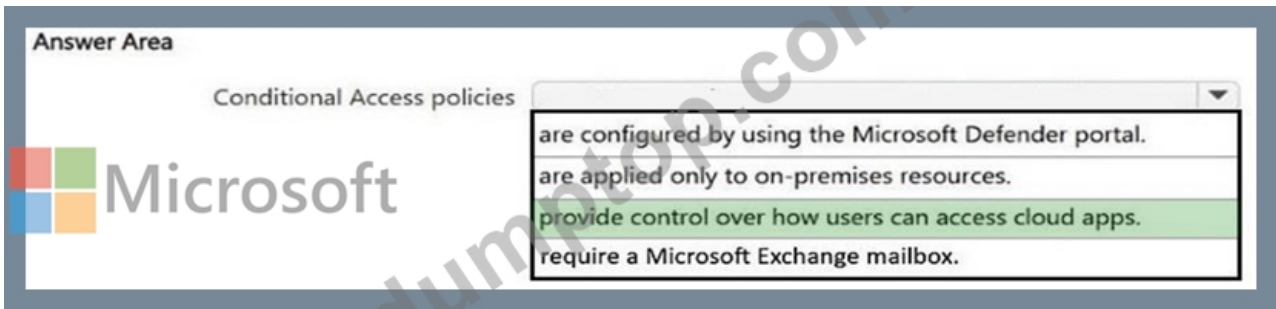

are applied only to on-premises resources.

provide control over how users can access cloud apps.

require a Microsoft Exchange mailbox.

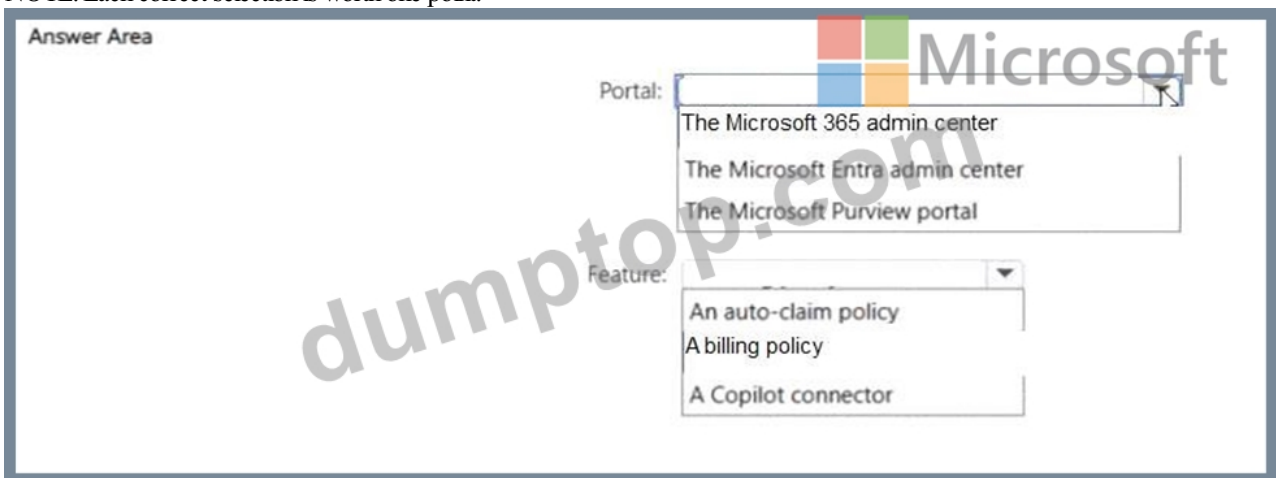

정답:

설명:

질문 # 25

Your company uses Microsoft 365 Copilot pay-as-you-go billing. The company wants greater visibility into Copilot usage costs and the ability to forecast departmental spending. You need to ensure that you can see Copilot costs by department. What should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

정답:

설명:

The correct selections are The Microsoft 365 admin center and A billing policy . Microsoft documents that Microsoft 365 Copilot pay-as-you-go is administered in the Microsoft 365 admin center , specifically under Copilot > Billing & usage , where admins create and manage billing policies . Microsoft explains that a billing policy defines the billing infrastructure for pay-as-you-go, including the Azure subscription and the set of users covered by that policy. That user scoping is what allows organizations to separate usage and spending by groups such as departments. Microsoft also documents that billing policies support budgets , spending views , and monitoring current expenses for services linked to the policy. This supports the requirement for greater visibility into Copilot usage costs and forecasting departmental spending. By assigning different departments to different billing policies, the organization can track Copilot costs by department. The other listed features do not fit: auto- claim policy is unrelated to cost tracking, and Copilot connector is for external data grounding, not billing segmentation.

질문 # 26

Select the answer that correctly completes the sentence.

Answer Area

정답:

설명:

Answer Area

The correct answer is Microsoft SharePoint sites . Microsoft Learn documents that Microsoft Purview sensitivity labels for containers can be applied to Microsoft Teams, Microsoft 365 groups, and SharePoint sites . These labels can control settings such as privacy, external sharing, and unmanaged device access for the labeled site. That is the official Microsoft feature that matches the sentence in the question.

The other options are not the best match for this item. Microsoft 365 Copilot conversations are not the standard object to which admins directly apply a sensitivity label in the way this question is asking. Copilot can honor labels on source content and may display label context in responses, but the selectable resource here is not "Copilot conversations." Azure Blob Storage is also not the intended answer in the Microsoft 365 Copilot and Agent Admin context for Purview sensitivity labels.

So for this hotspot, the sentence is correctly completed with Microsoft SharePoint sites , because Microsoft explicitly supports applying Purview sensitivity labels to SharePoint sites as a container-level labeling capability.

질문 # 27

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point

Statements	Yes	No
Microsoft Purview Communications Compliance can detect offensive text in images stored in Microsoft SharePoint sites.	<input type="radio"/>	<input type="radio"/>
Microsoft Purview Communications Compliance anonymizes user identities by default during investigations.	<input type="radio"/>	<input type="radio"/>
Microsoft Purview Communications Compliance adds a disclaimer to all monitored communications.	<input type="radio"/>	<input type="radio"/>

정답:

설명:

Answer Area

Statements	Yes	No
Microsoft Purview Communications Compliance can detect offensive text in images stored in Microsoft SharePoint sites.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Purview Communications Compliance anonymizes user identities by default during investigations.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Purview Communications Compliance adds a disclaimer to all monitored communications.	<input type="radio"/>	<input checked="" type="radio"/>

Communications Compliance uses OCR (optical character recognition) and machine learning to detect offensive or risky text inside images , including those in SharePoint and OneDrive.

By default, Communications Compliance pseudonymizes user identities to reduce investigator bias. Admins can later de-anonymize if needed.

It does not add disclaimers. It silently monitors communications and flags policy violations; disclaimers are handled by Exchange transport rules, not Communications Compliance.
