**C777 WEB DEVELOPMENT APPLICATION POST
ASSESSMENT EXAM GUIDE 2025 | GRADED A+
GUARANTEED PASS!!**

A Web designer who assigns percentage values to elements using the HTML structural elements is using what page-layout method?

answer: Liquid

Anatoly is using the CSS position property to position block-level elements on his Web pages. By specifying the "absolute" positioning scheme, Anatoly is ensuring that the element to which he is applying the position property will:

answer: float above the document and can be positioned as needed

Consider the following Cascading Style Sheets (CSS) rule:

```
body {color: #008080;}
```

Which is the "declaration" portion of this rule?

answer: The portion inside the curly braces

Consider the following code:

```
<input list="continents" name="continent">  
<datalist id="continents">  
<option value="North America">  
<option value="South America">  
<option value="Europe">  
<option value="Asia">  
<option value="Africa">  
<option value="Australia">  
<option value="Antarctica">  
</datalist>
```

Which two attributes' values must match each other in order to bind the <datalist> element with the <input> element?

answer: The list attribute and the id attribute

Consider the following code:

Practice on WGU Web-Development-Applications practice test software improves your problem-solving skills and enables you to complete the WGU Web-Development-Applications exam within the time set. Practice with Web-Development-Applications practice test software to increase your capability to understand the queries and solve them quickly during the Web-Development-Applications Exam. Dumpkiller is a reliable platform, offering WGU Web-Development-Applications pdf questions and practice tests for the last many years. Thousands of candidates have already used them for their WGU Web-Development-Applications exam preparation and gave positive feedback.

WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
Topic 2	<ul style="list-style-type: none"> • Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.
Topic 3	<ul style="list-style-type: none"> • HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.
Topic 4	<ul style="list-style-type: none"> • Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.

If you want to know PDF version of WGU Web-Development-Applications new test questions, you can download our free demo before purchasing. Yes, we provide free PDF version for your reference. If you want to know the quality of our PDF version of Web-Development-Applications new test questions, free PDF demo will show you. PDF version is easy for read and print out. If you are used to studying on paper, this version will be suitable for you. Besides, you place order for your companies, PDF version of Web-Development-Applications new test questions can be printed out many times and suitable for demonstration.

WGU Web Development Applications Sample Questions (Q33-Q38):

NEW QUESTION # 33

Given the following JavaScript code:

Which code segment calls the method?

- A. `Obj,sayHello;`
- B. `Window,sayhello();`

Answer: A

Explanation:

To call the `sayHello` method in the given JavaScript object, you need to use the object's name followed by the method name with parentheses.

* Correct Method Call:

* Given the object definition:

```
var obj = {
  sayHello: function() {
    alert("Hello");
```

```
}  
};
```

* To call the method sayHello on the object obj:

```
obj.sayHello();
```

* Explanation:

* Option A: Obj.sayHello; is incorrect syntax. The correct syntax is obj.sayHello();.

* Option B: Window.sayHello(); is incorrect because the method is defined in the object, not the window object.

NEW QUESTION # 34

Given the following CSS statement:

□ Which code segment changes the font color when the viewport is 800 pixels wide or wider?

- A.
- B.
- C.
- D.

Answer: C

Explanation:

To change the font color when the viewport is 800 pixels wide or wider, a media query with min-width:

800px is used. This ensures that the styles inside the media query are applied only when the viewport width is at least 800 pixels.

* CSS Media Queries:

* Syntax for Media Query:

```
@media screen and (min-width: 800px) {  
body {  
color: black;  
}  
}
```

* Explanation: The min-width: 800px condition ensures that the styles are applied when the viewport is 800 pixels or wider.

* Example Analysis:

* Option A:

```
@media screen and (min-width: 800px) {  
body {  
color: black;  
}  
}
```

* Correct. This applies the color: black; style to the body when the viewport is 800 pixels or wider.

* Option B:

```
@media min-width: 800px {  
body {  
color: black;  
}  
}
```

* Incorrect. Missing screen and which is required for a proper media query targeting screens.

* Option C:

```
@media screen and (max-width: 800px) {  
body {  
color: black;  
}  
}
```

* Incorrect. This applies the style when the viewport is 800 pixels or narrower.

* Option D:

```
@media max-width: 800px {  
body {  
color: black;  
}
```

}

* Incorrect. This applies the style when the viewport is 800 pixels or narrower.

:

MDN Web Docs - Using media queries

W3Schools - CSS Media Queries

The correct use of media queries ensures that the specified styles are applied only under the desired conditions, providing a responsive design.

NEW QUESTION # 35

What should be used to request and update data in the background?

- A. DOM
- B. API
- C. **AJAX**
- D. Canvas

Answer: C

Explanation:

> "AJAX (Asynchronous JavaScript and XML) is a technique used in web development to send and retrieve data from a server asynchronously, without interfering with the display and behavior of the existing page."

> This enables dynamic updates of web content without a full page reload.

* W3C: XMLHttpRequest API

NEW QUESTION # 36

Which attribute displays help text in an input field without specifying an actual value for the input?

- A. **Placeholder**
- B. For
- C. name
- D. Default

Answer: A

Explanation:

The placeholder attribute in an <input> element displays help text in the input field without specifying an actual value for the input. This text disappears when the user starts typing.

* Placeholder Attribute: This attribute provides a hint to the user about what type of information is expected in the field.

* Usage Example:

```
<input type="text" placeholder="Enter your name">
```

The input field will show "Enter your name" as help text.

W3C HTML Specification on Input Placeholder

NEW QUESTION # 37

Which code segment contains a conditional expression?

- A. □
- B. □
- C. □
- D. □

Answer: C

Explanation:

A conditional expression in JavaScript is an expression that evaluates to a boolean value and controls the execution flow based on its result. The conditional (ternary) operator `?:` is used for conditional expressions.

* Example Analysis:

* Option A:

```
var result = dataCount;
```

* This is a simple assignment, not a conditional expression.

* Option B:

```
var result = count++ > 10;
```

* This is a comparison but not a complete conditional expression.

* Option C:

```
var result = dataCount++ * 1000 == 3000000;
```

* This is an arithmetic operation followed by a comparison but not a complete conditional expression.

* Option D:

```
javascript
```

Copy code

```
var result = count >= 10 ? "Done" : getResult();
```

* This is a conditional (ternary) expression. If count is greater than or equal to 10, result will be "Done", otherwise, it will call getResult().
