MLA-C01 Reliable Exam Prep & Trustworthy MLA-C01 Exam Content

Besides, considering the current status of practice materials market based on exam candidates' demand, we only add concentrated points into our MLA-C01 exam tool to save time and cost for you. Our MLA-C01 exam tool has three versions for you to choose, PDF, App, and software. If you have any question or hesitate, you can download our free Demo. The Demo will show you part of the content of our MLA-C01 Study Materials real exam materials. So you do not have to worry about the quality of our exam questions. Our MLA-C01 exam tool have been trusted and purchased by thousands of candidates. What are you waiting for?

Amazon AWS Certified Machine Learning Engineer - Associate Sample Questions (Q114-Q119):

NEW QUESTION # 114
A company's ML engineer has deployed an ML model for sentiment analysis to an Amazon SageMaker endpoint. The ML engineer needs to explain to company stakeholders how the model makes predictions.
Which solution will provide an explanation for the model's predictions?

- A. Add a shadow endpoint. Analyze prediction differences on samples.
- B. Show the distribution of inferences from A/?testing in Amazon CloudWatch.
- C. Use SageMaker Model Monitor on the deployed model.
- D. Use SageMaker Clarify on the deployed model.

Answer: D

NEW QUESTION # 115

A company has trained and deployed an ML model by using Amazon SageMaker. The company needs to implement a solution to record and monitor all the API call events for the SageMaker endpoint. The solution also must provide a notification when the number of API call events breaches a threshold.

Which solution will meet these requirements?

- A. Log all the endpoint invocation API events by using AWS CloudTrail. Use an Amazon CloudWatch dashboard for monitoring. Set up a CloudWatch alarm to provide notification when the threshold is breached.
- B. Add the Invocations metric to an Amazon CloudWatch dashboard for monitoring. Set up a CloudWatch alarm to provide notification when the threshold is breached.
- C. Use SageMaker Debugger to track the inferences and to report metrics. Use the tensor_variance built-in rule to provide a notification when the threshold is breached.
- D. Use SageMaker Debugger to track the inferences and to report metrics. Create a custom rule to provide a notification when the threshold is breached.

Answer: A

NEW QUESTION # 116

A company needs to run a batch data-processing job on Amazon EC2 instances. The job will run during the weekend and will take 90 minutes to finish running. The processing can handle interruptions. The company will run the job every weekend for the next 6 months.

Which EC2 instance purchasing option will meet these requirements MOST cost-effectively?

- A. Spot Instances
- B. On-Demand Instances
- C. Dedicated Instances
- D. Reserved Instances

Answer: A

NEW QUESTION # 117

A company has deployed an XGBoost prediction model in production to predict if a customer is likely to cancel a subscription. The company uses Amazon SageMaker Model Monitor to detect deviations in the F1 score.

During a baseline analysis of model quality, the company recorded a threshold for the F1 score.

After several months of no change, the model's F1 score decreases significantly.

What could be the reason for the reduced F1 score?

- A. The model was not sufficiently complex to capture all the patterns in the original baseline data.
- B. Concept drift occurred in the underlying customer data that was used for predictions.
- C. The original baseline data had a data quality issue of missing values.
- D. Incorrect ground truth labels were provided to Model Monitor during the calculation of the baseline.

Answer: B

NEW QUESTION # 118

A company is using Amazon SageMaker to create ML models. The company's data scientists need fine-grained control of the ML workflows that they orchestrate. The data scientists also need the ability to visualize SageMaker jobs and workflows as a directed acyclic graph (DAG). The data scientists must keep a running history of model discovery experiments and must establish model governance for auditing and compliance verifications.

Which solution will meet these requirements?

- A. Use AWS CodePipeline and its integration with SageMaker Studio to manage the entire ML workflows. Use SageMaker ML Lineage Tracking for the running history of experiments and for auditing and compliance verifications.
- B. Use AWS CodePipeline and its integration with SageMaker Experiments to manage the entire ML workflows. Use SageMaker Experiments for the running history of experiments and for auditing and compliance verifications.
- C. Use SageMaker Pipelines and its integration with SageMaker Experiments to manage the entire ML workflows. Use

SageMaker Experiments for the running history of experiments and for auditing and compliance verifications.

- D. Use SageMaker Pipelines and its integration with SageMaker Studio to manage the entire ML workflows. Use SageMaker ML Lineage Tracking for the running history of experiments and for auditing and compliance verifications.

Answer: D

NEW QUESTION # 119
