### >> JN0-637 Interactive Questions <<

## Juniper JN0-637 Exam | JN0-637 Interactive Questions - Sample Download Free of JN0-637 Exam Registration

This will help them polish their skills and clear all their doubts. Also, you must note down your Security, Professional (JNCIP-SEC) (JN0-637) practice test score every time you try the Juniper Exam Questions. It will help you keep a record of your study and how well you are doing in them. PDFVCE hires the top industry experts to draft the Security, Professional (JNCIP-SEC) (JN0-637) exam dumps and help the candidates to clear their Security, Professional (JNCIP-SEC) (JN0-637) exam easily. PDFVCE plays a vital role in their journey to get the JN0-637 certification.

### Juniper JN0-637 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"> <li>Advanced IPsec VPNs: Focusing on networking professionals, this part covers advanced IPsec VPN concepts and requires candidates to demonstrate their skills in real-world applications.</li> </ul>                              |
| Topic 2 | <ul style="list-style-type: none"> <li>Automated Threat Mitigation: This topic covers Automated Threat Mitigation concepts and emphasizes implementing and managing threat mitigation strategies.</li> </ul>                                                           |
| Topic 3 | <ul style="list-style-type: none"> <li>Logical Systems and Tenant Systems: This topic of the exam explores the concepts and functionalities of logical systems and tenant systems.</li> </ul>                                                                          |
| Topic 4 | <ul style="list-style-type: none"> <li>Multinode High Availability (HA): In this topic, aspiring networking professionals get knowledge about multinode HA concepts. To pass the exam, candidates must learn to configure or monitor HA systems.</li> </ul>            |
| Topic 5 | <ul style="list-style-type: none"> <li>Troubleshooting Security Policies and Security Zones: This topic assesses the skills of networking professionals in troubleshooting and monitoring security policies and zones using tools like logging and tracing.</li> </ul> |

## Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q80-Q85):

NEW QUESTION # 80

Exhibit

```

Aug  3 01:28:23 01:28:23.434801:CID-0:THREAD_ID-01:RT:  <172.20.101.10/59009->10.0.1.129/22;6,0x0> matched filter MatchTraffic:

denied

```

Referring to the exhibit, which three statements are true? (Choose three.)

- A. The packet is dropped before making an SSH connection.
- B. The packet's destination is to an interface on the SRX Series device.
- C. The packet originated within the Trust zone.
- D. The packet's destination is to a server in the DMZ zone.
- E. The packet is allowed to make an SSH connection.

Answer: A,B,C

#### NEW QUESTION # 82

You want to create a connection for communication between tenant systems without using physical revenue ports on the SRX Series device.

What are two ways to accomplish this task? (Choose two.)

- A. Use an external router.
- B. Use a secure wire.
- C. Use a point-to-point logical tunnel.
- D. Use an interconnect VPLS switch.

**Answer: B,C**

**Explanation:**

Secure wire and logical tunnels provide internal connectivity options for isolated tenant systems within an SRX device, avoiding the need for physical interfaces. Secure wire maintains security context, while logical tunnels facilitate inter-system communication. More on this can be found at [Juniper Tenant Systems Documentation](#).

To create a connection between tenant systems without using physical interfaces on an SRX Series device, you have two effective options:

\* Secure Wire (Answer C): This feature allows you to create a secure, internal connection between security zones. Essentially, traffic is bridged between two zones without needing to pass through physical interfaces, providing a "virtual" wire.

**Configuration Example:**

bash

**Copy code**

```
set security zones security-zone zone1 interfaces ge-0/0/0.0 host-inbound-traffic system-services all set security zones security-zone zone2 interfaces ge-0/0/1.0 host-inbound-traffic system-services all set security secure-wire secure-wire1 from-zone zone1 to-zone zone2
```

\* Point-to-Point Logical Tunnel (Answer D): This establishes a virtual connection between two different points (zones or systems) within the SRX device using logical interfaces like lt (logical tunnel interfaces). No physical ports are required, and it's useful for connecting isolated tenant systems.

**Configuration Example:**

bash

**Copy code**

```
set interfaces lt-0/0/0 unit 0 family inet address 192.168.1.1/30
set interfaces lt-0/0/1 unit 0 family inet address 192.168.1.2/30
set security zones security-zone zone1 interfaces lt-0/0/0.0
set security zones security-zone zone2 interfaces lt-0/0/1.0
```

Both methods are suitable for connecting systems within the SRX without using physical interfaces.

**NEW QUESTION # 83**

Exhibit:

```

user@srx> show ethernet-switching global-information
Global Configuration:

}

```

In which mode is the SRX Series device?

- A. Ethernet switching
- B. Packet
- C. Transparent

- Answer: D**

Which method does an SRX Series device in transparent mode use to learn about unknown devices in a network?

- Answer: C**
