

Web-Based Cisco 300-410 Practice Exam - Compatible with all OS

P.S. Free 2026 Cisco 300-410 dumps are available on Google Drive shared by Actual4Exams: https://drive.google.com/open?id=1NN9_-uB9wJv_-O59wHPRDQr8rgTgnDn

With the Cisco 300-410 exam practice test questions, you can easily speed up your 300-410 exam preparation and be ready to solve all the final Cisco 300-410 exam questions. As far as the top features of Cisco 300-410 Exam Practice test questions are concerned, these 300-410 exam questions are real and verified by experience exam trainers.

What Can You Benefit from Cisco 300-410 Exam

When you get a Cisco Certified Entry Network Technician (CCENT) you can make a difference in the world by helping to protect the environment and improve people's lives. Search for the opportunities to put your knowledge to work by placing Cisco 300-410 exam certification. Worth to get Cisco 300-410 certification to make a difference in the world. Certified professionals get better salary offers, more interesting jobs are available for them, and are able to move into other fields. Cover the Cisco 300-410 exam or get ready for the exam by using **Cisco 300-410 exam dumps**. Get ready to pass the 300-410 exam. Moment of success is now. Files are available for download. Understand the topics to pass the 300-410 Exam.

To prepare for the Cisco 300-410 exam, candidates can take the Implementing Cisco Enterprise Advanced Routing and Services (ENARSI) course, which covers the exam topics in depth. Additionally, candidates can use practice exams and study materials available online to familiarize themselves with the exam format and content. With thorough preparation and experience working with Cisco technologies, candidates can pass the Cisco 300-410 exam and obtain the Cisco Certified Specialist - Enterprise Advanced Infrastructure Implementation certification.

Get Certified on the First Attempt with Cisco 300-410 Exam Dumps

We check the updating of Cisco exam dumps everyday to make sure customer to pass the exam with latest vce dumps. Once the latest version of 300-410 exam pdf released, our system will send it to your mail immediately. You will be allowed to free update your 300-410 Top Questions one-year after purchased. Please feel free to contact us if you have any questions about our dumps.

Cisco 300-410 certification exam is designed to test an individual's knowledge and skills in implementing advanced routing technologies and services in an enterprise network. Implementing Cisco Enterprise Advanced Routing and Services certification is intended for network professionals who have experience in implementing and managing Cisco Enterprise network solutions. 300-410 Exam covers topics such as routing protocols, VPN technologies, QoS, and network security.

Cisco Implementing Cisco Enterprise Advanced Routing and Services Sample Questions (Q436-Q441):

NEW QUESTION # 436

During the maintenance window an administrator accidentally deleted the Telnet-related configuration that permits a Telnet connection from the inside network (Eth0/0) to the outside of the networking between Friday - Sunday night hours only. Which configuration resolves the issue?

A)

```
interface Ethernet0/0
ip address 10.1.1.1 255.255.255.0
ip access-group 101 in
!
access-list 101 permit udp 10.1.1.0 0.0.0.255 172.16.1.0 0.0.0.255
eq telnet time-range changewindow
!
time-range changewindow
periodic Friday Saturday Sunday 22:00 to 05:00
```

B)

```
interface Ethernet0/0
ip address 10.1.1.1 255.255.255.0
ip access-group 101 in
!
access-list 101 permit tcp 10.1.1.0 0.0.0.255 172.16.1.0 0.0.0.255
eq telnet time-range changewindow
!
time-range changewindow
periodic 22:00 to 05:00
```

C)

```
interface Ethernet0/0
ip address 10.1.1.1 255.255.255.0
ip access-group 101 in
!
access-list 101 permit tcp 10.1.1.0 0.0.0.255 172.16.1.0 0.0.0.255
eq telnet time-range changewindow
!
time-range changewindow
periodic Friday Saturday Sunday 22:00 to 05:00
```

D)

```
interface Ethernet0/0
ip address 10.1.1.1 255.255.255.0
ip access-group 101 in
!
access-list 101 permit udp 10.1.1.0 0.0.0.255 172.16.1.0 0.0.0.255
eq telnet time-range changewindow
!
time-range changewindow
```

- A. Option A
- B. Option C
- C. Option D
- D. Option B

Answer: B

NEW QUESTION # 437

Refer to the exhibit. The administrator noticed that the connection was flapping between the two ISPs instead of switching to ISP2 when the ISP1 failed. Which action resolves the issue?

```

ip sla 1
  icmp-echo 8.8.8.8
  threshold 1000
  timeout 2000
  frequency 5
ip sla schedule 1 life forever start-time now
!
track 1 ip sla 1
!
ip route 0.0.0.0 0.0.0.0 203.0.113.1 name ISP1 track 1
ip route 0.0.0.0 0.0.0.0 198.51.100.1 2 name ISP2

```

- A. Include a valid source-interface keyword in the icmp-echo statement.
- B. Modify the static routes to refer both to the next hop and the outgoing interface.
- C. Modify the threshold to match the administrative distance of the ISP2 route.
- D. Reference the track object 1 on the default route through ISP2 instead of ISP1.

Answer: A

Explanation:

With this configuration, when Track 1 is UP, traffic to the Internet (8.8.8.8 is the well-known DNS of Google) flows through ISP1. When Track 1 is DOWN, traffic to the Internet flows through ISP 2. But there is a problem with this configuration is we did not specify the source IP of the track. Usually, our router (R1 in the figure below) is connected to two ISPs via two different interface like this:

So if we don't specify the source IP, R1 will ping via E0/0 to ISP1. If the ping fails, R1 will remove the first default route so the backup path via ISP2 will be used and traffic will be sent via E0/1. But it also makes the track UP again (as we did not specify the source IP) and the main path is installed again to the routing table -> The connection will flap between two ISPs.

Therefore, in order to solve this issue, we must configure a source IP for the ping. In the example above, we can configure like this: "icmp-echo 8.8.8.8 source-ip 10.0.12.1".

Note: The configuration above means:

Timeout: 2000 milliseconds

frequency: 5 seconds

threshold: 1000 milliseconds

Reference: <https://www.cisco.com/c/en/us/support/docs/ip/ip-routing/200785-ISP-Failover-with-default-routes-using-I.html>

NEW QUESTION # 438

Refer to Exhibit.

```
R1#sh ipv6 access-list GUARD
IPv6 access list GUARD
deny tcp any host 2001:DB8:A:B::10 eq telnet (6 matches) sequence 10
permit tcp host 2001:DB8:A:A::20 host 2001:DB8:A:B:10 eq telnet sequence 20
permit tcp host 2001:DB8:A:A::22 host 2001:DB8:D::1 eq www sequence 30
permit ipv6 2001:DB8:A:A::/64 any (67 matches) sequence 40
```

PC2 is directly connected to R1. A user at PC2 cannot Telnet to 2001.db8:a:b::10. The user can ping 2001.db8:a:b::10 and receive DHCP-related information from the DHCP server. Which action resolves the issue?

- A. Remove sequence 40 and put it back as sequence 15.
- B. Remove sequence 30 and put it back as sequence 5.
- C. Remove sequence 20 and put it back as sequence 45.
- **D. Remove sequence 10 and put it back as sequence 25.**

Answer: D

NEW QUESTION # 439

Drag and Drop the IPv6 First-Hop Security features from the left onto the definitions on the right.

IPv6 DHCPv6 Guard	Block a malicious host and permit the router from a legitimate route.
IPv6 Binding Table	Block reply and advertisement messages from unauthorized DHCP servers and relay agents.
IPv6 Source Guard	Create a binding table that is based on NS and NA messages.
IPv6 RA Guard	Filter inbound traffic on Layer 2 switch ports that are not in the IPv6 binding table.
IPv6 ND Inspection	Deny IPv6 neighbors connected to the device from information sources such as NDP snooping.

Answer:

Explanation:

NEW QUESTION # 440

Refer to the exhibit.

The security department recently installed a monitoring device between routers R3 and R5, which a loss of network connectivity for users connected to R5. Troubleshooting revealed that the monitoring device cannot forward multicast packets. The team already updated R5 with the correct configuration. Which configuration must be implemented on R3 to resolve the problem by ensuring R3 as the DR for the R3-R5 segment?

```

ip address 10.99.53.1 255.255.255.252
access-group 122 in
ospf network non-broadcast
ospf priority 0

router ospf 10
router-id 10.10.3.255
network 10.99.53.0 0.0.0.3 area 0
neighbor 10.99.53.2

```

```

access-list 122 permit 89 host 10.99.53.2 host 10.99.53.1
access-list 122 deny 89 any any
access-list 122 permit tcp any any
access-list 122 permit udp any any
access-list 122 permit ip any any

```

- A.

```

interface FastEthernet0/0
ip address 10.99.53.1 255.255.255.252
ip access-group 122 in
ip ospf network point-to-point
ip ospf priority 100

router ospf 10
router-id 10.10.3.255
network 10.99.53.0 0.0.0.3 area 0
neighbor 10.99.53.2

```

```

access-list 122 permit 88 host 10.99.53.2 host 10.99.53.1
access-list 122 deny 88 any any

```

- B.

```

interface FastEthernet0/0
ip address 10.99.53.1 255.255.255.252
ip access-group 122 in
ip ospf network non-broadcast
ip ospf priority 0
}

router ospf 10
router-id 10.10.3.255
neighbor 10.99.53.2

access-list 122 permit 88 host 10.99.53.2 host 10.99.53.1
access-list 122 deny 88 any any
access-list 122 permit tcp any any
access-list 122 permit udp any any
access-list 122 permit icmp any any

```

- C.

```

interface FastEthernet0/0
ip address 10.99.53.1 255.255.255.252
ip access-group 122 in
ip ospf network non-broadcast
ip ospf priority 100
}

router ospf 10
router-id 10.10.3.255
