## AZ-801 Free Dump Download | Test AZ-801 Pattern

Up to now, we have business connection with tens of thousands of exam candidates who adore the quality of our AZ-801 exam questions. Besides, we try to keep our services brief, specific and courteous with reasonable prices of AZ-801 Study Guide. All your questions will be treated and answered fully and promptly. So as long as you contact us to ask for the questions on the AZ-801 learning guide, you will get the guidance immediately.

## Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q140-Q145):

### NEW QUESTION # 140

Your network contains a single-domain Active Directory Domain Services (AD DS) forest named contoso.com. The functional level of the forest is Windows Server 2012 R2. All domain controllers run Windows Server 2012 R2.

Sysvol replicates by using the File Replication Service (FRS).

You plan to replace the existing domain controllers with new domain controllers that will run Windows Server 2022.

You need to ensure that you can add the first domain controller that runs Windows Server 2022.

Solution; You raise the domain and forest functional levels.  
Does this meet the goal?

- A. No
- B. Yes

**Answer: A**

#### NEW QUESTION # 141

You have an on-premises server named Server1 that runs Windows Server.

You have an Azure subscription.

You plan to back up the files and folders on Server1 by using the Microsoft Azure Recovery Services (MARS) agent.

You need to identify to which location the backups can be written and the maximum number of scheduled backups that can be performed per day.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point

**Answer Area**

Backup location:

Maximum number of scheduled backups per day:

 Microsoft

**Answer:**

**Explanation:**

**Answer Area**

Backup location:

Maximum number of scheduled backups per day:

 Microsoft

#### NEW QUESTION # 142

You have a Windows Server failover cluster named Cluster1 that has a cloud witness and the nodes shown in the following table.

Name	Windows Server role	Assigned vote
Node1	File Server, DFS Namespace Server	1
Node2	DFS Namespace Server	1
Node3	File Server, DFS Namespaces Server	1
Node4	File Server	1

Cluster1 has the roles shown in the following table.

Name	Cluster role
FS1	File Server for general use
DFS1	DFS Namespace Server

Cluster1 has the following configuration.

```
PS C:\> Get-ClusterFaultDomain
```

Name	Type	ParentName	ChildrenNames	Location
Site1	Site		{Node1, Node2}	
Site2	Site		{Node3, Node4}	
Node1	Node	Site1		
Node2	Node	Site1		
Node3	Node	Site2		
Node4	Node	Site2		

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

Statements	Yes	No
If FS1 runs on Node3, and Node3 fails, FS1 will fail over to Node4 automatically.	<input type="radio"/>	<input type="radio"/>
If DFS1 runs on Node2, and Node2 fails, DFS1 will fail over to Node3 automatically.	<input type="radio"/>	<input type="radio"/>
If Site2 fails, DFS1 will remain available.	<input type="radio"/>	<input type="radio"/>

**Answer:**

**Explanation:**

Statements	Yes	No
If FS1 runs on Node3, and Node3 fails, FS1 will fail over to Node4 automatically.	<input checked="" type="radio"/>	<input type="radio"/>
If DFS1 runs on Node2, and Node2 fails, DFS1 will fail over to Node3 automatically.	<input type="radio"/>	<input checked="" type="radio"/>
If Site2 fails, DFS1 will remain available.	<input checked="" type="radio"/>	<input type="radio"/>

### NEW QUESTION # 143

You have a Hyper-V failover cluster named Cluster1 that uses a cloud witness. Cluster1 hosts a virtual machine named VM1 that runs Windows Server.

You need to fail over VM1 automatically to a different node when a service named Service1 on VM1 fails.

What should you do on Cluster1 and VM1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Cluster1:	<div> <input type="checkbox"/> Modify the settings of the VM1 cluster role.           <input type="checkbox"/> Configure monitoring of the VM1 cluster role.           <input type="checkbox"/> Change the startup priority of the VM1 cluster role.         </div>
VM1:	<div> <input type="checkbox"/> Configure the Startup Type of Service1.           <input type="checkbox"/> Configure the Recovery settings of Service1.           <input type="checkbox"/> Configure the Startup and Recovery settings.           <input type="checkbox"/> Install and configure the Azure Monitor agent.         </div>

**Answer:**

Explanation:

Cluster1:	<div>▼</div> <div>Modify the settings of the VM1 cluster role. <b>Configure monitoring of the VM1 cluster role.</b> Change the startup priority of the VM1 cluster role.</div>
VM1:	<div>▼</div> <div>Configure the Startup Type of Service1. <b>Configure the Recovery settings of Service1.</b> Configure the Startup and Recovery settings. Install and configure the Azure Monitor agent.</div>

#### NEW QUESTION # 144

Your network contains an Active Directory Domain Services (AD DS) domain that has the Active Directory Recycle Bin enabled. The domain contains two domain controllers named DC1 and DC2. The system state of the domain controllers is backed up daily at 23:00 by using Windows Server Backup.

You have an organizational unit (OU) named ParisUsers that contains 1,000 users.

At 08:00, DC1 shuts down for hardware maintenance. The maintenance completes, but DC1 remains shut down.

At 09:00, an administrative error causes the manager attribute of each user in ParisUsers to be deleted.

You need to recover the user account details as quickly as possible. The solution must minimize data loss.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Start DC1 normally.

Perform an authoritative restore on DC1.

Recover all the user objects in the Active Directory Recycle Bin.

Start DC1 by using the Last Known Good Configuration.

Start DC1 in Directory Services Restore Mode.

Perform a system state restore on DC1.

Answer Area

**Answer:**

Explanation:

Actions	Answer Area
Start DC1 normally.	Start DC1 in Directory Services Restore Mode.
Perform an authoritative restore on DC1.	
Recover all the user objects in the Active Directory Recycle Bin.	Perform a system state restore on DC1.
Start DC1 by using the Last Known Good Configuration.	Perform an authoritative restore on DC1.
Start DC1 in Directory Services Restore Mode.	
Perform a system state restore on DC1.	

#### Explanation

Text, table Description automatically generated with medium confidence

Start DC1 in Directory Services Restore Mode.
Perform a system state restore on DC1.
Perform an authoritative restore on DC1.

#### NEW QUESTION # 145
