

SPLK-2002考試資訊 - SPLK-2002資訊

2026 KaoGuTi最新的SPLK-2002 PDF版考試題庫和SPLK-2002考試問題和答案免費分享：https://drive.google.com/open?id=15N4-4GGiLQsLmzqkc59SIAz5B_ljTFR

如果你想選擇通過 Splunk SPLK-2002 認證考試來使自己在如今競爭激烈的IT行業中地位更穩固，讓自己的IT職業能力變得更強大，你必須得具有很強的專業知識。而且通過 Splunk SPLK-2002 認證考試也不是很簡單的。或許通過Splunk SPLK-2002認證考試是你向IT行業推廣自己的一個敲門磚，但是不一定需要花費大量的時間和精力來復習相關知識，你可以選擇用我們的 KaoGuTi的產品，是專門針對IT認證考試相關的培訓工具。

Splunk SPLK-2002考試是IT專業人士想要成為Splunk Enterprise架構專家的重要認證。該考試測試了候選人在Splunk架構的各個方面，包括部署規劃、故障排除和優化方面的知識、技能和能力。通過該考試是成為認證Splunk Enterprise架構師的關鍵步驟，這是IT行業中非常受歡迎的角色。

Splunk SPLK-2002 認證考試是一項業界公認的認證，適用於希望展示他們在 Splunk Enterprise 方面專業知識的 IT 專業人士。此認證考試旨在測試 IT 專業人員在 Splunk 架構、部署和管理領域的知識和技能。SPLK-2002 考試適用於已經具備 Splunk 基礎知識並有使用 Splunk Enterprise 的經驗的個人。

SPLK-2002考試包含76個多選題，旨在測試個人在各個領域的知識，例如Splunk架構和部署、數據管理、安全和存取控制以及故障排除。考試時間為2小時，考生需要至少獲得70%的分數才能通過考試。考試在線上進行，考生可以在任何方便的地方參加考試。考試費用為400美元，考生需要通過Splunk網站進行註冊。

SPLK-2002資訊，SPLK-2002題庫更新

如果考生沒有基礎，可以選擇資策會進行補習，考生在還要上班的情形下，又想快速通過 SPLK-2002 考試，可以選擇 KaoGuTi SPLK-2002 題庫，覆蓋率很高，可以順利通過考試，從而獲得 Splunk 的認證證書。我們承諾所有購買“SPLK-2002題庫”的客戶，都將獲得一年免費升級的售後服務，確保客戶考試的一次通過率。並實行“一次不過全額退款”的保障，絕對保證考生的利益不受到任何的損失。

最新的 Splunk Enterprise Certified Architect SPLK-2002 免費考試真題 (Q196-Q201):

問題 #196

A customer has a four site indexer cluster. The customer has requirements to store five copies of searchable data, with one searchable copy of data at the origin site, and one searchable copy at the disaster recovery site (site4). Which configuration meets these requirements?

- A. site_search_factor = origin:2, site4:1, total:3
- B. site search factor = origin:1, site4:1, total:5
- C. site_replication_factor = origin:2, site4:1, total:3
- D. site_replication_factor = origin:1, site4:1, total:5

答案： D

解題說明：

The correct configuration to meet the customer's requirements is site_replication_factor = origin:1, site4:1, total:5. This means that each bucket will have one copy at the origin site, one copy at the disaster recovery site (site4), and three copies at any other sites. The total number of copies will be five, as required by the customer. The site_replication_factor determines how many copies of each bucket are stored across the sites in a multisite indexer cluster1. The site_search_factor determines how many copies of each bucket are searchable across the sites in a multisite indexer cluster2. Therefore, option B is the correct answer, and options A, C, and D are incorrect.

1: Configure the site replication factor 2: Configure the site search factor

問題 #197

Determining data capacity for an index is a non-trivial exercise. Which of the following are possible considerations that would affect daily indexing volume? (select all that apply)

- A. Number of data sources.
- B. Average size of event data.
- C. Number of concurrent searches on data.
- D. Peak data rates.

答案： A,B,D

解題說明：

According to the Splunk documentation1, determining data capacity for an index is a complex task that depends on several factors, such as:

* Average size of event data. This is the average number of bytes per event that you send to Splunk. The larger the events, the more storage space they require and the more indexing time they consume.

* Number of data sources. This is the number of different types of data that you send to Splunk, such as logs, metrics, network packets, etc. The more data sources you have, the more diverse and complex your data is, and the more processing and parsing Splunk needs to do to index it.

* Peak data rates. This is the maximum amount of data that you send to Splunk per second, minute, hour, or day. The higher the peak data rates, the more load and pressure Splunk faces to index the data in a timely manner.

The other option is false because:

* Number of concurrent searches on data. This is not a factor that affects daily indexing volume, as it is related to the search performance and the search scheduler, not the indexing process. However, it can affect the overall resource utilization and the responsiveness of Splunk2.

問題 #198

(A high-volume source and a low-volume source feed into the same index. Which of the following items best describe the impact of this design choice?)

- A. Low volume data will improve the compression factor of the high volume data.
- B. Search speed on low volume data will be slower than necessary.
- C. Low volume data may move out of the index based on volume rather than age.
- D. High volume data is optimized by the presence of low volume data.

答案： B,C

問題 #199

Which search head cluster component is responsible for pushing knowledge bundles to search peers, replicating configuration changes to search head cluster members, and scheduling jobs across the search head cluster?

- A. Captain

- B. Master
- C. Deployment server
- D. Deployer

答案： A

解題說明：

Explanation

The captain is the search head cluster component that is responsible for pushing knowledge bundles to search peers, replicating configuration changes to search head cluster members, and scheduling jobs across the search head cluster. The captain is elected from among the search head cluster members and performs these tasks in addition to serving search requests. The master is the indexer cluster component that is responsible for managing the replication and availability of data across the peer nodes. The deployer is the standalone instance that is responsible for distributing apps and other configurations to the search head cluster members. The deployment server is the instance that is responsible for distributing apps and other configurations to the deployment clients, such as forwarders

問題 #200

Which of the following is a way to exclude search artifacts when creating a diag?

- A. SPLUNK_HOME/bin/splunk diag --disable=dispatch
- B. SPLUNK_HOME/bin/splunk diag --debug --refresh
- C. SPLUNK_HOME/bin/splunk diag --exclude
- D. SPLUNK_HOME/bin/splunk diag --filter-searchstrings

答案： C

解題說明：
