Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q339-Q344):

NEW QUESTION # 339

Which of the following password policies is considered a best practice?

- A. Storing passwords in plain text format
- B. Requiring passwords to be changed every 5 years
- C. Enforcing a minimum password length and complexity requirements
- D. Allowing users to set easily guessable passwords

Answer: C

Explanation:

Enforcing a minimum password length and complexity requirements is considered a best practice for password policies. This helps to ensure that passwords are not easily guessable and increases the security of user accounts.

NEW QUESTION # 340

Which security feature provides network segmentation by creating virtual networks?

- A. VLANs
- B. Intrusion Prevention System (IPS)
- C. VPNs
- D. Virtual Private Network (VPN)

Answer: A

Explanation:

Option 1: Correct, VLANs (Virtual Local Area Networks) provide network segmentation by creating virtual networks, allowing different groups of devices to be logically separated on the same physical network.

Option 2: Incorrect, Firewalls are designed to monitor and filter network traffic based on predetermined security rules, but they do not provide network segmentation by creating virtual networks.

Option 3: Incorrect, An Intrusion Prevention System (IPS) is a security appliance or software that monitors network traffic for suspicious activity and takes action to prevent potential threats, but it does not provide network segmentation by creating virtual networks.

Option 4: Incorrect, A Virtual Private Network (VPN) is a secure tunnel between two or more devices, typically used to connect remote sites or allow remote users to access the private network. It does not provide network segmentation by creating virtual networks.

NEW QUESTION # 341

Which of the following is true about security policies and procedures?

- A. They should be regularly reviewed and updated to reflect changing threats and technologies
- B. They should only be accessible to the IT department.
- C. They should be kept confidential and not shared with employees.
- D. They should be documented once and never changed.

Answer: A

Explanation:

Option 1: Correct: Security policies and procedures should be regularly reviewed and updated to ensure they align with changing threats and technologies. This helps to maintain the effectiveness of the policies and processes.

Option 2: Incorrect: Security policies and procedures should be accessible to relevant employees and stakeholders, not restricted only to the IT department. It is important for everyone to understand and adhere to the policies and procedures.

Option 3: Incorrect: Security policies and procedures should be regularly updated as needed, not documented once and never changed. The changing threat landscape and evolving technologies necessitate the periodic review and update of security policies and procedures.

Option 4: Incorrect: Security policies and procedures should be communicated and shared with employees to ensure everyone understands and follows them. Keeping them confidential and not sharing them would hinder their effectiveness.

NEW QUESTION # 342

What type of encryption is used to secure data that is stored on a hard drive or other storage media?

- A. Public Key Infrastructure (PKI)
- B. File-based encryption
- C. Hash encryption
- **D. Symmetric encryption**

Answer: D

Explanation:

Symmetric encryption is a type of encryption where the same key is used for both the encryption and decryption processes. It is commonly employed to secure data at rest, such as on a hard drive or other storage media. With symmetric encryption, the key must be kept secret to ensure the confidentiality of the encrypted data.

NEW QUESTION # 343

Which of the following best describes network security?

- A. Securing physical access to network devices
- **B. Protecting data from unauthorized access or modifications**
- C. Ensuring high availability and performance of the network
- D. Preventing network configuration errors

Answer: B

Explanation:

Network security is the practice of protecting data in a network from unauthorized access, modifications, or attacks. It involves implementing various security measures such as access control, encryption, firewalls, and intrusion prevention systems.
