## PMI Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam Sample Questions (Q72-Q77):

### NEW QUESTION # 72

During CPMAI Phase II of your project, your team is going through their data collection needs. One team member wants to make use of pre-trained models while another member is adamantly against it. As the project lead, what should you do?

- A. Evaluate your data and use only what you have and build all models in house.
- B. Have one team build all models in-house and the other team use pre-trained models and see which team's models perform better.
- **C. Evaluate your data and see if using pre-trained models make sense. If so, have the team do research to find the ones that best suit your project.**
- D. Evaluate your data and see if using pre-trained models make sense. If so, have the team see what pre-trained models your company already owns and use those.

**Answer: C**

Explanation:

The Pre-Trained and Third-Party Model Usage task in Phase II: Data Understanding directs teams to first assess whether external or foundation models are appropriate given the current data and objectives. If so, they should then research and select the specific pre-trained models that best align with the project's domain, performance needs, and integration constraints. This ensures suitability before committing to fine-tuning or ensemble strategies.

### NEW QUESTION # 73

You want to make sure that in your HR hiring system that applicants have the ability to contest the result. In what layer of the Trustworthy AI framework do we address this need?

- A. Transparent AI
- **B. Explainable AI**
- C. Responsible AI
- D. Ethical AI
- E. Governed AI

**Answer: B**

Explanation:

In CPMAI's Trustworthy AI requirements, the Explainable AI layer specifically covers "legal, compliance, and risk considerations [that] might require that the AI system used for decision-making ... provide some level of explainability for audit, root cause analysis, or other purposes." Providing applicants with the ability to contest hiring decisions depends on furnishing clear, human-understandable explanations of how and why the model arrived at its result—exactly the focus of the Required AI Explainability Considerations task.

### NEW QUESTION # 74

You've built your model and now need to see if it actually works as expected. In which phase of CPMAI is this done?

- A. Phase II
- B. Phase III
- C. Phase I
- **D. Phase V**
- E. Phase IV
- F. Phase VI

**Answer: D**

Explanation:

Phase V: Model Evaluation is dedicated to validating a trained model's performance against technical metrics and the business success criteria defined earlier. This phase encompasses tasks such as generating performance results, measuring KPIs, and deciding whether to retrain or proceed to operationalization.

### NEW QUESTION # 75

You're working with petabytes of data and need to make this dataset more manageable. To do this, you want to reduce the number of variables under consideration. What is the name for this process?

- A. Data selection
- B. Multivariate regression
- C. Dimensionality Reduction
- D. Gradient Descent

**Answer: C**

Explanation:

The process of reducing a dataset's feature set while retaining its most informative components is formally known as dimensionality reduction. CPMAI describes techniques such as Principal Component Analysis (PCA) and t-distributed Stochastic Neighbor Embedding (t-SNE) under this category, enabling teams to simplify high-dimensional data for more efficient modeling.

### NEW QUESTION # 76

Your team is working on an image recognition project, have collected the appropriate data for the project, and have picked a neural network algorithm. They are now ready to train their model.

In which phase of CPMAI is this done?

- A. Phase II
- B. Phase III
- C. Phase V
- D. Phase I
- E. Phase IV
- F. Phase VI

**Answer: E**

Explanation:

Phase IV: Model Development is explicitly where "Model Training / Model Building" occurs. This phase includes tasks for selecting modeling techniques, conducting hyperparameter optimization, and executing the actual training runs on the prepared datasets.
