Scrum SSM (6.0) - SAFe® Scrum Master Sample Questions (Q67-Q72):

NEW QUESTION # 67

What is one anti-pattern of the Inspect and Adapt?

- A. Too many ideas enter the problem-solving workshop
- **B. No actionable improvement Features are created**
- C. Only one problem is identified by each team in the retrospective
- D. Not enough team members attend the PI System demo

Answer: B

Explanation:

One anti-pattern of the Inspect and Adapt (I&A) is to have no actionable improvement Features created as a result of the problem-solving workshop. This is considered an anti-pattern because the main goal of the I&A workshop is to identify and address the systemic issues that are limiting the effectiveness of the Agile Release Train (ART). The workshop should produce one or more improvement Features that are added to the ART backlog and prioritized for the next PI Planning event. These Features should be SMART (Specific, Measurable, Achievable, Relevant, and Time-bound) and aligned with the ART vision and goals. Without actionable improvement Features, the ART will miss the opportunity to learn and improve from the feedback and data collected during the PI.
