Our product boasts three versions which include PDF version, PC version and APP online version. The Professional VMware NSX-T Data Center test guide is highly efficient and the forms of the answers and questions are the same. Different version boasts their own feature and using method, and the client can choose the most convenient method. For example, PDF format of 2V0-41.20 guide torrent is printable and boosts instant access to download. You can learn at any time, and you can update the [2V0-41.20 Exam Questions](#) freely in any day of one year. It provides free PDF demo. You can learn the APP online version of 2V0-41.20 guide torrent in your computer, cellphone, laptop or other set. Every version has their advantages so you can choose the most suitable method of Professional VMware NSX-T Data Center test guide to prepare the exam. Believe us that we can bring you the service of high quality and make you satisfied.

VMware 2V0-41.20 is a professional-level certification exam that is designed to test the skills and knowledge of individuals who are interested in working with VMware NSX-T Data Center. 2V0-41.20 exam is intended for individuals who have some experience with VMware products and are looking to enhance their knowledge and skills in the area of network and security virtualization.

## Fortinet FCSS\_EFW\_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Routing:</b> This section of the exam measures the skills of a Network Infrastructure Engineer and covers the implementation of dynamic routing protocols for enterprise network traffic management. It includes configuring both OSPF and BGP routing protocols to ensure efficient and reliable data transmission across complex organizational networks.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>System Configuration:</b> This section of the exam measures the skills of a Network Security Architect and covers the implementation and integration of core Fortinet infrastructure components. It includes deploying the Security Fabric, enabling hardware acceleration, configuring high availability operational modes, and designing enterprise networks utilizing VLANs and VDOM technologies to meet specific organizational requirements.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>VPN:</b> This section of the exam measures the skills of a VPN Solutions Engineer and covers the implementation of various virtual private network technologies. It includes configuring IPsec VPN using IKE version 2 protocols and implementing Automatic Discovery VPN solutions to establish on-demand secure tunnels between multiple sites within an enterprise network infrastructure.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Security Profiles:</b> This section of the exam measures the skills of a Threat Prevention Specialist and covers the configuration and management of comprehensive security profiling systems. It includes implementing SSL</li> <li>• <b>SSH inspection, combining web filtering and application control mechanisms, integrating intrusion prevention systems, and utilizing the Internet Service Database to create layered security protections for organizational networks.</b></li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Central Management:</b> This section of the exam measures the skills of a Security Operations Manager and covers the implementation of centralized management systems for coordinated control and oversight of distributed Fortinet security infrastructures across enterprise environments.</li> </ul>

## Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q86-Q91):

### NEW QUESTION # 86

Which two approaches facilitate efficient ADVPN deployment?

- A. Best link only
- B. VPN Manager enable
- C. IPsec templates
- D. Loopback

**Answer: B,C**

### NEW QUESTION # 87

An administrator is extensively using VXLAN on FortiGate. Which specialized acceleration hardware does FortiGate need to improve its performance?

- A. 0
- B. SP5
- C. NP7

- D. NTurbo

**Answer: C**

**Explanation:**

VXLAN (Virtual Extensible LAN) is an overlay network technology that extends Layer 2 networks over Layer 3 infrastructure. When VXLAN is used extensively on FortiGate, hardware acceleration is crucial for maintaining performance.

NP7 (Network Processor 7) is Fortinet's latest network processor designed to accelerate high-performance networking features, including:

- VXLAN encapsulation/decapsulation
- IPsec VPN offloading
- Firewall policy enforcement
- Advanced threat protection at wire speed

NP7 significantly reduces latency and improves throughput when handling VXLAN traffic, making it the best choice for large-scale VXLAN deployments.

### NEW QUESTION # 88

Refer to the exhibit, which shows a physical topology and a traffic log.

The administrator is checking on FortiAnalyzer traffic from the device with IP address 10.1.10.1, located behind the FortiGate ISFW device.

The firewall policy in on the ISFW device does not have UTM enabled and the administrator is surprised to see a log with the action Malware, as shown in the exhibit.

What are the two reasons FortiAnalyzer would display this log? (Choose two.)

- **A. The firewall policy in NGFW-1 has UTM enabled.**
- B. Security rating is enabled in ISFW.
- C. ISFW is not connected to FortiAnalyzer and must go through NGFW-1.
- **D. ISFW is in a Security Fabric environment.**

**Answer: A,D**

**Explanation:**

From the exhibit, ISFW is part of a Security Fabric environment with NGFW-1 as the Fabric Root. In this architecture, FortiGate devices share security intelligence, including logs and detected threats.

ISFW is in a Security Fabric environment:

# Security Fabric allows devices like ISFW to receive threat intelligence from NGFW-1, even if UTM is not enabled locally.

# If NGFW-1 detects malware from IP 10.1.10.1 to 89.238.73.97, this information can be propagated to ISFW and FortiAnalyzer.

The firewall policy in NGFW-1 has UTM enabled:

# Even though ISFW does not have UTM enabled, NGFW-1 (which sits between ISFW and the external network) does have UTM enabled and is scanning traffic.

# Since NGFW-1 detects malware in the session, it logs the event, which is then sent to FortiAnalyzer.

### NEW QUESTION # 89

A company's guest internet policy, operating in proxy mode, blocks access to Artificial Intelligence Technology sites using FortiGuard. However, a guest user accessed a page in this category using port 8443.

Which configuration changes are required for FortiGate to analyze HTTPS traffic on nonstandard ports like 8443 when full SSL inspection is active in the guest policy?

- A. Add a URL wildcard domain to the website CA certificate and use it in the SSL/SSH Inspection Profile.
- **B. In the Protocol Port Mapping section of the SSL/SSH Inspection Profile, enter 443, 8443 to analyze both standard (443)**

and non-standard (8443) HTTPS ports.

- C. To analyze nonstandard ports in web filter profiles, use TLSv1.3 in the SSL/SSH Inspection Profile.
- D. Administrators can block traffic on nonstandard ports by enabling the SNI check in the SSL/SSH Inspection Profile.

**Answer: B**

Explanation:

When FortiGate is operating in proxy mode with full SSL inspection enabled, it inspects encrypted HTTPS traffic by default on port 443. However, some websites may use non-standard HTTPS ports (such as 8443), which FortiGate does not inspect unless explicitly configured.

To ensure that FortiGate inspects HTTPS traffic on port 8443, administrators must manually add port 8443 in the Protocol Port Mapping section of the SSL/SSH Inspection Profile. This allows FortiGate to treat HTTPS traffic on port 8443 the same as traffic on port 443, enabling proper inspection and enforcement of FortiGuard category-based web filtering.

#### NEW QUESTION # 90

Refer to the exhibit.

```
FortiGate # get router info ospf status
Routing Process "ospf 0" with ID 0.0.0.5
Process uptime is 0 minute
Process bound to VRF default
Conforms to RFC2328, and RFC1583Compatibility flag is enabled
Supports only single TOS(TOS0) routes
Supports opaque LSA
Do not support Restarting
This router is an ABR
```

The partial output of an OSPF command is shown. While checking the OSPF status of FortiGate, you receive the output shown in the exhibit. Based on the output, which two statements about FortiGate are correct? (Choose two answers)

- A. FortiGate is connected to multiple areas.
- B. FortiGate injects external routing information.
- C. FortiGate is a backup designated router.
- D. FortiGate has OSPF ECMP enabled.

**Answer: A,D**

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation From Exact Extract of Enterprise Firewall 7.6 Administrator documents:

Based on the FortiOS 7.6 Infrastructure study guide and official documentation regarding OSPF monitoring, the command output `get router info ospf status` provides critical details about the OSPF process.

**Multiple Areas (Option D):** The last line of the exhibit explicitly states, "This router is an ABR" (Area Border Router). By definition in the OSPF protocol, an ABR is a router that is connected to multiple OSPF areas, typically Area 0 (the backbone) and at least one other non-backbone area.

**OSPF ECMP (Option A):** The output indicates that the OSPF process "Conforms to RFC2328". RFC 2328 is the standard for OSPFv2, which includes the capability for Equal-Cost Multi-Path (ECMP). In FortiOS, when OSPF is enabled and multiple routes to the same destination have the same cost, ECMP is supported by default unless specifically limited by the `maximum-paths` configuration. The mention of this RFC compliance in the status output confirms the engine's capability and support for multi-path routing.

Option C is incorrect because the output does not label the device as an ASBR (Autonomous System Boundary Router), which would be required to inject external routing information. Option B is incorrect because "ABR" refers to area hierarchy, not the election status (DR/BDR) on a specific network segment.

## NEW QUESTION # 91
