

High Pass-Rate RUCKUS New RCWA Test Cram & The Best CertkingdomPDF - Leading Provider in Qualification Exams

P.S. Free & New RCWA dumps are available on Google Drive shared by CertkingdomPDF: <https://drive.google.com/open?id=15D8C40vDmlncaKDt2zHujrgLQrdyq4oU>

The 24/7 support team is just an e-mail away for our customers so that they can contact us anytime. Our team will solve all of their issues as quickly as possible. Free demos and up to 1 year of free updates of our RUCKUS Exams are also available at CertkingdomPDF. Buy updated and Real RCWA Exam Questions now and earn your dream RCWA certification with CertkingdomPDF!

Success in the test of the RUCKUS Certified Wi-Fi Associate Exam (RCWA) certification proves your technical knowledge and skills. The RCWA exam credential paves the way toward landing high-paying jobs or promotions in your organization. Many people who attempt the RUCKUS Certified Wi-Fi Associate Exam (RCWA) exam questions don't find updated practice questions. Due to this they don't prepare as per the current RCWA examination content and fail the final test.

>> New RCWA Test Cram <<

Reliable RUCKUS RCWA Exam Book, Latest RCWA Test Pdf

RUCKUS RCWA certification can guarantee you have good job prospects, because RUCKUS certification RCWA exam is a difficult test of IT knowledge, passing RUCKUS Certification RCWA Exam proves that your IT expertise is strong and you can be qualified for a good job.

RUCKUS Certified Wi-Fi Associate Exam Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which two statements are true regarding roaming on RUCKUS WLANs? (Choose two.)

- A. 802.11ac Aggregate MMPDUs decrease roam times.
- B. Use of 802.11r Fast-Transition depends on the Encryption option.
- C. 802.11u Hotspot integration increases roaming speed.
- D. Roaming can be enhanced by building 802.11k neighbor AP lists.
- E. 802.11w PMF enables additional probe responses for faster roaming.

Answer: B,D

Explanation:

Seamless roaming on RUCKUS WLANs is achieved through support for 802.11k, 802.11r, and 802.11v enhancements, which collectively improve handoff efficiency and reduce latency when clients move between APs.

According to RUCKUS One Online Help - Fast Roaming Configuration and RUCKUS AI Documentation - Client Mobility Optimization, the following statements are true:

802.11k (C): Enables APs to provide Neighbor Reports listing surrounding APs and their channels, allowing clients to make faster

and more intelligent roaming decisions.

802.11r (D): Implements Fast BSS Transition (FT), reducing authentication delay during roaming by pre-establishing encryption keys. However, its operation depends on the encryption type-it is supported only with WPA2-Enterprise (802.1X) and WPA2/WPA3-Personal modes, not open WLANs.

The other options are incorrect: 802.11ac aggregation does not affect roaming; 802.11u supports Hotspot 2.0, not fast transition; and 802.11w (PMF) adds management frame protection, not roaming enhancements.

Thus, the correct answers are C (802.11k neighbor lists) and D (802.11r depends on encryption type).

NEW QUESTION # 73

When configuring a WLAN for 802.1X, which mode will provide authentication service for APs in the event of a controller failure?

- **A. Local user database**
- B. Dynamic PSK
- C. Proxy
- D. Non-proxy

Answer: A

Explanation:

When configuring an 802.1X-secured WLAN, RUCKUS systems such as SmartZone, RUCKUS One, or RUCKUS Cloud typically rely on an external RADIUS server for user authentication. However, in the event of a controller failure or connectivity loss to the RADIUS server, RUCKUS APs can continue to authenticate users locally if the local user database is enabled and configured. The Local Authentication Database allows APs or controllers to store a limited set of credentials that can be used when external AAA services are unavailable. This ensures continued access and redundancy for critical WLANs without requiring external dependency. According to RUCKUS One Online Help - WLAN Configuration and AAA Settings, enabling the Local Authentication Database provides fallback authentication for 802.1X clients during system or connectivity failures.

In contrast, the proxy and non-proxy modes define how authentication requests are relayed to the RADIUS server, while Dynamic PSK (DPSK) is a separate authentication method that replaces 802.1X with per-user keys.

NEW QUESTION # 74

Which feature in SmartZone automates firmware distribution to AP zones with version consistency control?

- A. AP Patch Manager
- **B. Image Management**
- C. AP Provisioning Policy
- D. Zone Upgrade Scheduler

Answer: B

Explanation:

Image Management in SmartZone automates the firmware upgrade process for APs, ensuring consistent software versions across all zones and AP models.

As detailed in RUCKUS One Online Help - Image Management and Firmware Control, administrators can upload, assign, and schedule firmware images by zone. The system automatically validates version compatibility before deployment to prevent mismatched or unsupported upgrades.

RUCKUS Analytics 3.5 User Guide - Firmware Compliance Monitoring confirms that this ensures version uniformity across large distributed networks.

Options like Zone Upgrade Scheduler and AP Provisioning Policy are part of related workflows but not the primary feature controlling image management.

NEW QUESTION # 75

An administrator has completed a new install of SmartZone-Essentials for switch management, and has configured the SmartZone IP as the registrar IP on an ICX 7450. Which condition explains why the switch is not connecting?

- A. SmartZone is not configured to allow self-signed certificates.
- B. SNMPv3 is not enabled on SmartZone.
- C. DHCP options are not properly configured for the switch.
- D. SmartZone High Scale is required for ICX switch management.

Answer: A

Explanation:

When deploying SmartZone-Essentials (SZ-100/SZ-144) for RUCKUS ICX switch management, the switches establish a secure HTTPS-based connection to the controller using the SmartZone registrar IP. A common issue preventing connection occurs when SmartZone is not configured to accept self-signed certificates-which are typically used by ICX switches by default for initial onboarding.

As described in the RUCKUS One Online Help - SmartZone Switch Management Setup and RUCKUS AI documentation, administrators must explicitly enable the option to "Allow Self-Signed Certificates" in the controller's Switch Management settings. Without this configuration, the SmartZone rejects the ICX connection request during SSL/TLS handshake, causing registration failure.

SNMPv3 configuration and DHCP options are unrelated to initial controller registration. Additionally, SmartZone-Essentials fully supports ICX management; SmartZone High Scale is not required.

Thus, the correct answer is C- the connection fails because the controller is not set to accept self-signed certificates from the switch.

NEW QUESTION # 76

By which process does 802.11k assist in client roaming?

- A. Caching encryption information
- B. Forcing clients to disconnect from their associated AP
- C. Providing a list of available neighbor APs
- D. Ignoring join requests for weak clients

Answer: C

Explanation:

The IEEE 802.11k amendment enhances Wi-Fi client roaming by allowing an AP to share information about nearby access points with connected clients. This process, known as the Neighbor Report, provides a list of available APs that the client can use to make faster, more informed roaming decisions.

When a client device receives this neighbor list, it can scan fewer channels, reducing latency and improving the handoff experience- especially in enterprise networks managed by RUCKUS One, SmartZone, or RUCKUS Cloud. According to RUCKUS One Online Help and RUCKUS AI documentation, enabling

802.11k/v/r features together allows for fast and seamless roaming, as 802.11k supplies discovery data,

802.11v assists with steering decisions, and 802.11r enables fast re-authentication.

Option C is correct because 802.11k's core function is to help clients identify the best potential APs to roam to.

The other options describe unrelated functions: encryption caching relates to 802.11r, ignoring weak clients is an AP policy function, and forcing disconnections occurs during load balancing or steering-not through 802.11k.

NEW QUESTION # 77

.....

Our RCWA learning materials prepared by our company have now been selected as the secret weapons of customers who wish to pass the exam and obtain relevant certification. If you are agonizing about how to pass the exam and to get the RCWA certificate, now you can try our learning materials. Our reputation is earned by high-quality of our learning materials. Once you choose our training materials, you chose hope. Our learning materials are based on the customer's point of view and fully consider the needs of our customers. If you follow the steps of our RCWA Learning Materials, you can easily and happily learn and ultimately succeed in the ocean of learning.
