**HPE6-A78 Passguide | Testking HPE6-A78 Learning Materials**

HP is one of the most powerful and rapidly growing fields nowadays. Everyone is trying to get the HP HPE6-A78 certification to improve their futures with it. Success in the test plays an important role in the up gradation of your CV and getting a good job or working online to achieve your dreams. The students are making up their minds for the HP HPE6-A78 test but they are mostly confused about where to prepare for it successfully on the first try. This confusion leads to choosing outdated material and ultimately failure in the test. The best way to avoid failure is using updated and real questions.

## HP Aruba Certified Network Security Associate Exam Sample Questions (Q103-Q108):

### NEW QUESTION # 103

A company has an Aruba solution with a Mobility Master (MM) Mobility Controllers (MCs) and campus Aps. What is one benefit of adding Aruba Airwave from the perspective of forensics?

- A. Airwave retains information about the network for much longer periods than ArubaOS solution
- B. Airwave can provide more advanced authentication and access control services for the ArubaOS solution
- C. Airwave is required to activate Wireless Intrusion Prevention (WIP) services on the ArubaOS solution
- D. AirWave enables low level debugging on the devices across the ArubaOS solution

#### Answer: A

Explanation:

Adding Aruba Airwave to an Aruba solution that includes a Mobility Master (MM), Mobility Controllers (MCs), and campus APs offers several benefits, notably in the realm of network forensics. One of the significant advantages is that Airwave can retain detailed information about the network for much longer periods than what is typically possible with just ArubaOS solutions. This extensive data retention is crucial for forensic analysis, allowing network administrators and security professionals to conduct thorough investigations of past incidents. With access to historical data, professionals can identify trends, pinpoint security breaches, and understand the impact of specific changes or events within the network over time.

:

Aruba's official product documentation and user guides for Airwave and ArubaOS, which outline features, benefits, and use cases related to network management and forensic capabilities.

Industry case studies and whitepapers that discuss the implementation and advantages of integrating Airwave into existing network infrastructure for enhanced monitoring and security.

### NEW QUESTION # 104

What role does the Aruba ClearPass Device Insight Analyzer play in the Device Insight architecture?

- A. It resides In the cloud and applies machine learning and supervised crowdsourcing to metadata sent by Collectors
- B. It resides on-prem and provides the span port to which traffic is mirrored for deep analytics.
- C. It resides in the cloud and manages licensing and configuration for Collectors
- D. It resides on-prem and is responsible for running active SNMP and Nmap scans

#### Answer: A

### NEW QUESTION # 105

□ A company has added a new user group. Users in the group try to connect to the WLAN and receive errors that the connection has no Internet access. The users cannot reach any resources. The first exhibit shows the record for one of the users who cannot connect. The second exhibit shows the role to which the ArubaOS device assigned the user's client.

What is a likely problem?

- A. The ArubaOS device does not have the correct RADIUS dictionaries installed on it to understand the Aruba-User-Role VSA.
- B. The ArubaOS device has a server derivation rule configured on it that has overridden the role sent by CPPM.
- C. The role name that CPPM is sending does not match the role name configured on the ArubaOS device.
- D. The clients rejected the server authentication on their side because they do not have the root CA for CPPM's RADIUS/EAP certificate.

#### Answer: C

Explanation:

The image indicates that there is an issue with the user role assignment, which is key to network access in ArubaOS. If the user role name sent by CPPM doesn't match any of the roles defined in the ArubaOS, then the user will be assigned a default or incorrect role that does not have the necessary permissions, thus leading to the connection errors and lack of Internet access. Ensuring that the role names are consistent between CPPM and ArubaOS can resolve this issue.

**NEW QUESTION # 106**

What is a guideline for creating certificate signing requests (CSRs) and deploying server Certificates on ArubaOS Mobility Controllers (MCs)?

- A. Create the CSR and public/private keypair offline If you want to install the same certificate on multiple MCs.
- B. Create the CSR online using the MC Web UI if your company requires you to archive the private key.
- C. if you create the CSR and public/private Keypair offline, create a matching private key online on the MC.
- D. Generate the private key online, but the public key and CSR offline, to install the same certificate on multiple MCs.

**Answer: A**

Explanation:

Creating the Certificate Signing Request (CSR) and the public/private keypair offline is recommended when deploying server certificates on multiple ArubaOS Mobility Controllers (MCs). This method enhances security by minimizing the exposure of private keys. By creating and handling these components offline, administrators can maintain better control over the keys and ensure their security before deploying them across multiple devices. This approach also simplifies the management of certificates on multiple controllers, as the same certificate can be installed more securely and efficiently.

:

ArubaOS documentation on CSR creation and certificate management.

**NEW QUESTION # 107**

You need to deploy an Aruba instant AP where users can physically reach It. What are two recommended options for enhancing security for management access to the AP? (Select two )

- A. Configure WPA3-Enterprise security on the AP
- B. install a CA-signed certificate
- C. Place a Tamper Evident Label (TEL) over its console port
- D. Disable the Web UI.
- E. Disable Its console ports

**Answer: B,D**

Explanation:

When deploying an Aruba Instant AP in a location where users can physically access it, enhancing security for management access could involve several measures: C. Disabling the Web UI will prevent unauthorized access via the browser-based management interface, which could be a security risk if the AP is within physical reach of untrusted parties. E. Installing a CA-signed certificate helps ensure that any communication with the AP's management interface is encrypted and authenticated, preventing man-in-the-middle attacks and eavesdropping.

**NEW QUESTION # 108**

.....

We will provide you with three different versions of our HPE6-A78 exam questions on our test platform: PDF, software and APP versions. The three different versions will offer you same questions and answers, but they have different functions. You can choose any one version of our HPE6-A78 guide torrent. For example, if you need to use our products in an offline state, you can choose the online version; if you want to try to simulate the real examination, you can choose the software. In a word, the three different versions of our HPE6-A78 Test Torrent will help you pass the HPE6-A78 exam.
