有用的SPLK-3002題庫下載和資格考試中的領先提供者和一流的最新SPLK-3002題庫資訊

为了能够高效率地准备SPLK-3002认证考试，你知道什么工具是值得使用的吗？我来告诉你吧。NewDumpsのSPLK-3002考古題是最可信的资料。这个考古题是IT业界的精英们研究出来的，是一个难得的练习资料。這個考古題的命中率很高，合格率可以達到100%。這是因為IT專家們可以很好地抓住考試的出題點，從而將真實考試時可能出現的所有題都包括到資料裏了。覺得不可思議嗎？但是這是真的。用過之後你就會知道。

最新的 Splunk IT Service SPLK-3002 免費考試真題 (Q71-Q76):

問題 #71
What effects does the KPI importance weight of 11 have on the overall health score of a service?

- A. It is a minimum health indicator KPI.
- B. Importance weight is unused for health scoring.
- C. At least 10% of the KPIs will go critical.
- D. The service will go critical.

答案：A

問題 #72
In which index are active notable events stored?

- A. itsi_notable_audit
- B. itsi_notable_archive
- C. itsi_tracked_alerts
- D. itsi_tracked_groups

答案：C

解題說明：
In Splunk IT Service Intelligence (ITSI), notable events are created and managed within the context of its Event Analytics framework. These notable events are stored in the itsi_tracked_alerts index. This index is specifically designed to hold the active notable events that are generated by ITSI's correlation searches, which are based on the conditions defined for various services and their KPIs. Notable events are essentially alerts or issues that need to be investigated and resolved. The itsi_tracked_alerts index enables efficient storage, querying, and management of these events, facilitating the ITSI's event management and review process. The other options, such as itsi_notable_archive and itsi_notable_audit, serve different purposes, such as archiving resolved notable events and auditing changes to notable event configurations, respectively. Therefore, the correct answer for where active notable events are stored is the itsi_tracked_alerts index.

問題 #73
Where are KPI search results stored?

- A. The default index.
- B. The itsi_summary index.
- C. Output to a CSV lookup.
- D. KV Store.

答案：B

解題說明：
Search results are processed, created, and written to the itsi_summary index via an alert action.
Reference: https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/BaseSearch D is the correct answer because KPI search results are stored in the itsi_summary index in ITSI. This index is an events index that stores the results of scheduled KPI searches. Summary indexing lets you run fast searches over large data sets by spreading out the cost of a computationally expensive report over time.
References: Overview of ITSI indexes

問題 #74
When deploying ITSI on a distributed Splunk installation, which component must be installed on the search head(s)?

- A. SA-ITSI-Licensechecker
- B. ITSI app
- C. All ITSI components
- D. SA-ITOA

答案：B

解題說明：
Install SA-ITSI-Licensechecker and SA-UserAccess on any license master in a distributed or search head cluster environment. If a search head in your environment is also a license master, the license master components are installed when you install ITSI on the search heads.
Reference: https://docs.splunk.com/Documentation/ITSI/4.10.2/Install/InstallDD When deploying ITSI on a distributed Splunk installation, the component that must be installed on the search head(s) is the ITSI app. The ITSI app contains the main features and functionality of ITSI, such as service creation and management, KPI configuration, glass table creation and editing, episode review, deep dives, and so on. The ITSI app also contains some add-ons that provide additional functionality, such as SA-ITOA (IT Operations Analytics), SA-UserAccess (User Access Management), and SA-Utils (Utility Functions). The ITSI app must be installed on the search head(s) because it handles the search management and presentation functions for ITSI. References: Install IT Service Intelligence in a distributed environment

問題 #75
Which of the following items describe ITSI teams? (select all that apply)

- A. By default, all services are owned by the built-in 'global' team and administered by the 'itoa_admin' role.
- B. A new team admin role should be created for each team. The new role should inherit the 'itoa_team_admin' role.
- C. Services should be assigned to the 'global' team if all users need access to it.

- D. Teams should have itoa admin roles added with read-only permissions for services and entities.

答案：A,B,C

解題說明：
In Splunk IT Service Intelligence (ITSI), teams are used to organize services, KPIs, and other objects within ITSI to facilitate access control and management:
B) Services should be assigned to the 'global' team if all users need access to it: The 'global' team in ITSI is a built-in concept that denotes universal accessibility. Assigning services to the 'global' team makes them accessible to all ITSI users, irrespective of their specific team memberships. This is useful for services that are relevant across the entire organization.
C) By default, all services are owned by the built-in 'global' team and administered by the 'itoa_admin' role: This default setting ensures that upon creation, services are accessible to administrators and can be further re-assigned or refined for access by specific teams as needed.
D) A new team admin role should be created for each team. The new role should inherit the 'itoa_team_admin' role: This best practice allows for granular access control and management within teams. Each team can have its own administrators with the appropriate level of access and permissions tailored to the needs of that team, derived from the capabilities of the 'itoa_team_admin' role.
The concept of adding 'itoa admin roles' with read-only permissions contradicts the typical use case for administrative roles, which usually require more than read-only access to manage services and entities effectively.
