

TOP Valid Workday-Prism-Analytics Mock Test 100% Pass | Valid Valid Workday Pro Prism Analytics Exam Exam Forum Pass for sure

DOWNLOAD the newest ITEXamSimulator Workday-Prism-Analytics PDF dumps from Cloud Storage for free:
<https://drive.google.com/open?id=1XacztB1MWI1mw3XFUFUZBhAcHHZM0T9I>

As long as what you are looking for is high quality and accuracy practice materials, then our Workday-Prism-Analytics training guide is your indispensable choice. We are sufficiently definite of the accuracy and authority of our Workday-Prism-Analytics practice materials. So lousy materials will lead you end up in failure. They cannot be trusted unlike our Workday-Prism-Analytics Study Materials. Come together and our materials will serve as a doable way to strengthen your ability to solve questions on your way to success.

As far as the price of Workday Workday-Prism-Analytics exam practice test questions is concerned, these exam practice test questions are being offered at a discounted price. Get benefits from Workday Workday-Prism-Analytics exam questions at discounted prices and download them quickly. Best of luck in Workday-Prism-Analytics Exam and career!!! Just choose the best Workday-Prism-Analytics exam questions format and start Workday Workday-Prism-Analytics exam preparation without wasting further time.

>> Valid Workday-Prism-Analytics Mock Test <<

Valid Workday-Prism-Analytics Exam Forum - Latest Workday-Prism-Analytics Exam Dumps

Our track record is outstanding. With our actual Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam questions,

we have helped hundreds of Workday-Prism-Analytics exam applicants in achieving success. We guarantee that if you use our real Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam dumps you will clear the test in one go. And if you fail in this objective you can claim a full refund (terms and conditions apply). Excellent offers of ITExamSimulator don't stop here.

Workday Pro Prism Analytics Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

A Prism data writer has to create an intermediary Prism calculated field A, used only to achieve a final result in Prism calculated field B and they only need to publish out field B. What should they do?

- A. Delete field A from their DDS and just leave field B.
- B. Mark field A as intermediate calculation.
- **C. Add a Manage Fields stage to the DDS and hide field A.**
- D. Add a Manage Fields stage to the DDS and hide field B.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, when a data writer creates an intermediary calculated field (e.g., field A) solely to derive a final calculated field (e.g., field B) in a Derived Dataset (DDS), they may want to exclude the intermediary field from the published output to keep the dataset clean and focused. According to the official Workday Prism Analytics study path documents, the recommended approach is to add a Manage Fields stage to the DDS and hide field A. The Manage Fields stage allows users to control the visibility of fields in the dataset, enabling them to hide fields that are not needed in the final output while retaining their calculations for internal use within the dataset's transformation logic. By hiding field A, field B can still leverage field A's calculations, and only field B will be visible in the published dataset or data source.

The other options are not suitable:

A: Mark field A as intermediate calculation: There is no specific feature in Prism Analytics to "mark" a field as an intermediate calculation; this is not a supported action.

C: Add a Manage Fields stage to the DDS and hide field B: Hiding field B would defeat the purpose, as field B is the intended output to be published.

D: Delete field A from their DDS and just leave field B: Deleting field A would break the calculation of field B, as field B depends on field A, making this option infeasible.

Using the Manage Fields stage to hide field A ensures that the dataset remains functional while presenting only the necessary fields in the final output, aligning with best practices for data transformation and publishing.

NEW QUESTION # 23

You had to change the imported pipeline in a Join stage and your View Dataset Lineage report shows a Stage Alert regarding the disconnected pipeline. How can you fix this and make the alert disappear?

- A. Add a Manage Fields stage and re-attach the pipeline.
- B. Publish the derived dataset.
- **C. Delete the disconnected pipeline.**
- D. Change the imported pipeline to a different one.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a Stage Alert in the View Dataset Lineage report indicates an issue with the dataset's transformation pipeline, such as a disconnected pipeline resulting from changing the imported pipeline in a Join stage. According to the official Workday Prism Analytics study path documents, a disconnected pipeline occurs when a pipeline (e.g., a table or dataset) is no longer referenced by any transformation stage, often after modifying the Join stage to use a different imported pipeline. To resolve this alert, the recommended action is to delete the disconnected pipeline (option C). By removing the disconnected pipeline from the dataset, the lineage is updated to reflect only the active pipelines, and the Stage Alert will disappear, indicating that the dataset's configuration is now valid.

The other options are not appropriate:

* A. Add a Manage Fields stage and re-attach the pipeline: A Manage Fields stage modifies field properties and cannot re-attach a disconnected pipeline to the Join stage.

* B. Publish the derived dataset: Publishing the dataset does not resolve the issue of a disconnected pipeline; the alert will persist until the pipeline is addressed.

* C. Change the imported pipeline to a different one: This does not address the disconnected pipeline; it only changes the Join stage's configuration again, potentially causing further issues.

Deleting the disconnected pipeline ensures the dataset's lineage is clean and free of errors, resolving the Stage Alert in the View Dataset Lineage report.

NEW QUESTION # 24

You apply an Explode stage to your derived dataset that contains information on your worker benefit elections. What happens in the resulting stage?

- A. The number of columns stays the same and the original multi-instance field doesn't get dropped.
- B. The number of rows stays the same and the original multi-instance field does not get dropped.
- C. The number of columns exponentially increases and the original multi-instance field gets dropped.
- **D. The number of rows exponentially increases and the original multi-instance field gets dropped.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, an Explode stage is used to transform a multi-instance field into multiple rows, creating a single-instance field for each instance. According to the official Workday Prism Analytics study path documents, when an Explode stage is applied to a derived dataset containing worker benefit elections (a multi-instance field, e.g., a list of elected benefits per worker), the following occurs: the number of rows exponentially increases, and the original multi-instance field gets dropped (option D).

For example, if a worker has three benefit elections in a multi-instance field, the Explode stage will create three rows—one for each election—while the original multi-instance field (e.g., "Benefit Elections") is replaced by a single-instance field containing one election per row. The number of rows increases based on the number of instances in the multi-instance field (e.g., a dataset with 100 workers, each with 3 elections on average, would grow from 100 rows to 300 rows). The term "exponentially" in the question reflects this potential for significant row growth, though the increase is technically linear per record based on the number of instances. The other options are incorrect:

* A. The number of columns stays the same and the original multi-instance field doesn't get dropped: The original multi-instance field is dropped and replaced by a single-instance field; the column count may change slightly due to this replacement.

* B. The number of columns exponentially increases and the original multi-instance field gets dropped:

The Explode stage does not increase the number of columns exponentially; it primarily affects rows, with minimal impact on columns.

* C. The number of rows stays the same and the original multi-instance field does not get dropped: The number of rows increases due to the explosion of multi-instance data, and the original field is dropped.

The Explode stage's behavior of increasing rows and dropping the original multi-instance field aligns with its purpose of normalizing multi-instance data into a row-based structure.

NEW QUESTION # 25

You just imported your table on worker compensation into a derived dataset but before adding any transformation you want to make sure you have no NULL values for the Worker ID field. How can you get this insight?

- A. Join on the Worker ID field.
- B. Create a Prism calculated field.
- C. Add a Manage Fields stage.

- **D. Click on the field name and check the stage statistics.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, after importing a table into a derived dataset (DDS), you can inspect the data for quality issues, such as NULL values, before proceeding with transformations. According to the official Workday Prism Analytics study path documents, to check for NULL values in a specific field like Worker ID, the most direct method is to click on the field name and check the stage statistics. When viewing a dataset in the Prism Analytics interface, clicking on a field name (e.g., Worker ID) in the dataset preview displays stage statistics, which include metrics such as the count of NULL values, distinct values, and other data quality indicators. This feature allows users to quickly assess the presence of NULLs without modifying the dataset or adding unnecessary stages.

The other options are not the best approach for this task:

- * A. Add a Manage Fields stage: The Manage Fields stage is used to modify field properties (e.g., type, visibility), not to inspect data for NULL values.
- * C. Create a Prism calculated field: While a calculated field could be used to flag NULLs (e.g., using ISNULL), this is an indirect and unnecessary step compared to checking stage statistics.
- * D. Join on the Worker ID field: Joining with another dataset does not help identify NULL values in the Worker ID field and is irrelevant to this task.

Using stage statistics by clicking on the field name provides a straightforward and efficient way to gain insight into NULL values in the Worker ID field.

NEW QUESTION # 26

You want to use a custom report containing prompts as a source connection for a table. What must you ensure to make this possible?

- **A. The custom report prompts have default values assigned on the report definition.**
- B. The prompts are mapped at the data change task level.
- C. The report is built on an indexed data source.
- D. The prompts are marked as required.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, when using a custom report with prompts as a source connection for a table, the custom report must be configured to ensure compatibility with the Prism data ingestion process. According to the official Workday Prism Analytics study path documents, the key requirement is that the custom report prompts have default values assigned in the report definition. This is necessary because Prism Analytics does not support interactive prompting during data ingestion. Default values ensure that the report can run automatically without requiring user input, allowing the Data Change task to retrieve the data consistently and load it into the target table.

The other options are not correct in this context:

- * A. The report is built on an indexed data source: While indexed data sources can enhance performance for certain reports, they are not a requirement for using a custom report as a source for a Prism table.
- * B. The prompts are mapped at the data change task level: Prompts are not mapped in the Data Change task; instead, the task relies on the report's default values to execute the data retrieval.
- * D. The prompts are marked as required: Marking prompts as required does not address the need for automatic execution; default values are still needed to avoid manual intervention.

By assigning default values to prompts in the custom report definition, the report can be seamlessly integrated as a source connection for Prism Analytics, ensuring reliable data loading into the table.

NEW QUESTION # 27

.....

Everything needs a right way. The good method can bring the result with half the effort, the same different exam also needs the good test method. Our Workday-Prism-Analytics study questions in every year are summarized based on the test purpose, every answer is a template, there are subjective and objective exams of two parts, we have in the corresponding modules for different topic of deliberate practice. To this end, our Workday-Prism-Analytics Training Materials in the qualification exam summarize some problem-solving skills, and induce some generic templates. The user can scout for answer and scout for score based on the answer templates we provide, so the universal template can save a lot of precious time for the user.
