□

Answer:

Explanation:

□

Explanation:

Table Description automatically generated with medium confidence

□

NEW QUESTION # 140

Information about a rebooted device needs to be displayed with an ID of 260fa9-2d31-4312-cf96-143b46db0211 using the Cisco SD-WAN vManage Administration APIs. The API documentation states that deviceId is a required request parameter. Fill in the blank to create the REST call.

□

Answer:

Explanation:

GET

Explanation:

To retrieve information about a rebooted device using the Cisco SD-WAN vManage Administration APIs, you need to construct a REST call with the HTTP GET method. The base URL is `https://vmanage-ip-address:8443/dataservice/device/reboots`, where you replace `vmanage-ip-address` with the actual IP address of your vManage instance. The query parameter `deviceId` is appended to the URL with the value `260fa9-2d31-4312-cf96-143b46db0211`, which is the unique identifier of the device. NEW QUESTION # 141

Fill in the blank to complete the URL for an API call to Cisco SD-WAN to display the history of the Bidirectional Forwarding Detection sessions that run on a vEdge router.

□

Answer:

Explanation:

bfdhistory

<https://vmanage-ip-address/dataservice/device/bfd/synced/sessions?deviceId=deviceId>
