

C-BCBTP-2502考古題更新， C-BCBTP-2502認證

Exam Code: C_BCBTP_2502
Total No. of Questions: 30
Passing Percentage: 70
Exam Duration: 60 Min

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 1

Which of the following can you do with SAP Datasphere? Note: There are 2 correct answers to this question.

- A. Create and consume in-memory caches
- B. Manage user accounts and authorizations
- C. Integrate data from different sources
- D. Provide a unified data and analytics platform

Answer C D

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 2

What are the main types of APIs commonly used in SAP BTP? Note: There are 2 correct answers to this question.

- A. SOAP APIs
- B. REST APIs
- C. FTP APIs
- D. RPC APIs

Answer A B

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 3

What are some of the SAP BTP commercial models? Note: There are 2 correct answers to this question.

- A. Modular Pricing
- B. Pay-As-You-Go
- C. Subscription
- D. Named User License

Answer B C

2026 PDFExamDumps最新的C-BCBTP-2502 PDF版考試題庫和C-BCBTP-2502考試問題和答案免費分享：https://drive.google.com/open?id=1ooPcOW_tSZRMxHkvYS8TBa3yKUA3xhOZ

SAP C-BCBTP-2502 認證作為全球IT領域專家 SAP 熱門認證之一，是許多大中IT企業選擇人才標準的必備條件。SAP C-BCBTP-2502 考題由全球領先的IT認證考試中心授權，幫助考生一次性順利取得通過 C-BCBTP-2502 考試；否則將全額退費，這一舉動保證考生權利不受任何的損失。考生考試前需要在全全球的Prometric考試中心進行報名並預約考試時間。

很多人都認為要通過一些高難度的C-BCBTP-2502認證考試是需要精通很多SAP專業知識。只有掌握很全面的ISAP知識的人才會有資格去報名參加的考試。其實現在有很多方法可以幫你彌補你的知識不足的，一樣能通過C-BCBTP-2502認證考試，也許比那些專業知識相當全面的人花的時間和精力更少，正所謂條條大路通羅馬。

SAP C-BCBTP-2502考古題更新是行業領先材料& C-BCBTP-2502: SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite

如果你還在猶豫是否選擇PDFExamDumps，你可以先到PDFExamDumps網站下載我們免費提供的部分考試練習題和答案來確定我們的可靠性。如果你選擇下載我們的提供的所有考試練習題和答案，PDFExamDumps敢100%保證你可以以高分數一次性通過SAP C-BCBTP-2502 認證考試。

SAP C-BCBTP-2502 考試大綱:

主題	簡介
主題 1	<ul style="list-style-type: none">• Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
主題 2	<ul style="list-style-type: none">• Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

最新的 SAP Certified Associate C-BCBTP-2502 免費考試真題 (Q15-Q20):

問題 #15

Which SAP BTP product is critical for financial forecasting and analytics?

- A. SAP Fieldglass
- B. SAP Business Network
- C. SAP Ariba
- **D. SAP HANA Cloud**

答案: D

解題說明:

For financial forecasting to be effective, it requires the ability to process massive amounts of historical and real-time data with extreme speed. SAP HANA Cloud is the critical foundational product on SAP BTP that enables this. As a cloud-native, in-memory database, it allows for the convergence of transactional (OLTP) and analytical (OLAP) processing. This means that finance teams can run complex forecasting models directly on live transactional data without the need for time-consuming data transfers to separate data warehouses.

In the context of the SAP Business Suite, SAP HANA Cloud acts as the "single source of truth." It provides the high-performance data engine required by tools like SAP Analytics Cloud to perform predictive modeling and "what-if" simulations. Whether a company is predicting cash flow, modeling market volatility, or performing year-end consolidations, HANA Cloud ensures that the underlying data is accessible and processed in sub-seconds. This capability is essential for modern finance departments that must move from descriptive analytics (what happened) to predictive and prescriptive analytics (what will happen and what should we do). While Ariba and Fieldglass provide the source data for procurement and contingent labor, it is SAP HANA Cloud that provides the computational power necessary to turn that data into strategic financial insights.

問題 #16

How does SAP BTP support predictive analytics in business decision-making?

Note: There are 3 correct answers to this question.

- **A. By automating data visualization.**
- B. By requiring only manual data input.
- **C. By using SAP Data Intelligence for real-time insights.**
- **D. By leveraging AI and machine learning models.**
- E. By restricting analytics to financial data.

答案: A,C,D

解題說明:

SAP BTP provides a comprehensive ecosystem for predictive analytics, moving business decision-making from a reactive to a proactive state. This is achieved through three primary mechanisms. First, by leveraging AI and machine learning models (Option A),

BTP services like SAP AI Core allow developers to train models on historical business data to predict future trends, such as customer churn or equipment failure.

Second, the platform automates data visualization (Option B) through SAP Analytics Cloud. This ensures that complex predictive insights are presented in an intuitive, dashboard-driven format that business leaders can easily interpret and act upon, rather than sifting through raw spreadsheets.

Third, the platform utilizes SAP Data Intelligence for real-time insights (Option D). This component orchestrates data from across diverse sources-both SAP and non-SAP-ensuring that the predictive models are fed with the most current and relevant information. By integrating these three pillars-intelligence (AI/ML), visualization (Analytics), and orchestration (Data Intelligence)-SAP BTP transforms the SAP Business Suite into a forward-looking enterprise system. This allows organizations to anticipate market shifts, optimize their supply chains, and personalize customer interactions with a level of precision that was previously impossible, ultimately driving better business outcomes and long-term sustainability.

問題 #17

What is the primary function of SAP Business Process Intelligence?

- A. To store customer transactional data.
- B. To manage API security and integrations.
- **C. To analyze and optimize business processes using AI-driven insights.**
- D. To replace existing workflow automation tools.

答案: C

解題說明:

Before an organization can automate or improve its operations, it must first understand how its processes are actually running. The primary function of SAP Business Process Intelligence (largely centered around the SAP Signavio suite) is to analyze and optimize business processes using AI-driven insights. It provides

"Process Mining" capabilities that scan the data logs of the SAP Business Suite to reveal the "real" path a business process takes, often uncovering hidden bottlenecks, manual workarounds, and deviations from the standard procedure.

By positioning Business Process Intelligence as a starting point for digital transformation, SAP BTP allows organizations to make data-backed decisions about where to automate. For example, the tool might discover that a specific regional office takes twice as long to process purchase orders compared to the global average.

Using AI, it can identify the root cause-such as a lack of automation or incorrect master data-and recommend specific BTP services (like SAP Build) to fix the issue. This creates a cycle of continuous improvement, where processes are constantly monitored, analyzed, and optimized, ensuring that the SAP Business Suite operates at peak efficiency and remains aligned with the company's strategic goals.

問題 #18

Which of the following are key features of SAP BTP's Integration Suite? (Choose two).

- A. Manual data processing with no automation.
- **B. Built-in API management for secure data exchange.**
- C. Restricted integration to SAP-only services.
- **D. Prebuilt connectors for SAP and third-party applications.**

答案: B,D

解題說明:

The SAP Integration Suite is designed to handle the complexities of a hybrid and heterogeneous IT landscape.

One of its most significant features is the availability of thousands of prebuilt connectors and integration flows for both SAP and third-party applications (such as Salesforce, ServiceNow, and various government portals). These "accelerators" significantly reduce the time and cost associated with integration projects, as developers do not have to build connections from scratch. This allows businesses to achieve a faster "time-to-value" when expanding their digital ecosystem.

Another critical feature is built-in API management. As enterprises move toward microservices and cloud-native applications, the number of APIs (Application Programming Interfaces) increases exponentially. SAP Integration Suite provides a centralized layer to govern, secure, and monitor these APIs. This ensures that data exchange between systems is not only efficient but also highly secure, protecting the enterprise from unauthorized access or data breaches. By combining prebuilt content with robust API governance, SAP BTP enables organizations to create a "composable enterprise" where different systems can be easily connected and reconfigured to meet changing business needs, moving away from the rigid, manual processes of the past.

問題 #19

Which of the following capabilities does SAP AI Core provide?

- A. Strictly rule-based automation without AI capabilities.
- B. Transactional data management for ERP systems.
- **C. Predictive analytics and machine learning model deployment.**
- D. Hardware infrastructure for AI development.

答案： C

解題說明：

SAP AI Core is a vital service within the "Intelligent Technologies" pillar of SAP BTP, designed to handle the heavy lifting of artificial intelligence at an enterprise scale. Its primary capability is providing a standardized, highly scalable runtime for predictive analytics and machine learning (ML) model deployment. In the modern SAP Business Suite, "intelligence" is no longer just a buzzword; it is a functional requirement. SAP AI Core allows businesses to take raw data from their systems, train sophisticated models, and then deploy those models into production environments where they can serve real-time predictions.

This service is unique because it supports the full lifecycle of an AI model, including execution and monitoring. It allows developers to integrate AI features into their applications while maintaining "AI Ethics" and transparency, which are critical for enterprise compliance. Unlike standard transactional databases that focus on record-keeping, SAP AI Core focuses on "inference"-using data to generate new insights and automate complex decisions. By positioning SAP AI Core as the engine for intelligence, SAP BTP ensures that organizations can move beyond basic automation toward advanced, self-learning processes that improve over time, such as predictive maintenance in manufacturing or intelligent lead scoring in sales.
