Solution:

Based strictly on learning.sap.com sources, here are the two potential causes for a remaining variance on a production order:

☐ Correct Answers

C. The standard cost price of an input material has changed after calculating the standard price of the produced material

* A standard price update on an input material after the finished material's standard cost estimate can lead to cost differences that

aren't categorized, resulting in a remaining variance. SAP Help Portal+6SAP Learning+6SAP Community+6 D . The overhead calculation rate is different than that used for the calculation of the standard price

* If cost center overhead rates have changed since the standard costing run, the overhead portion of the production cost won't match the original plan, causing a remaining variance.

☐ Incorrect Options

* A. Rounding differences - These can lead to small variances but are typically classified under rounding variance, not "remaining" variance.

* B. Moving Average Price (MAP) indicator 'V' - This impacts output variances, not remaining variances within production order calculations.

☐ Final Answers:

* C. The standard cost price of an input material has changed after calculating the standard price of the produced material

* D. The overhead calculation rate is different than that used for the calculation of the standard price
