NEW QUESTION # 43

Huawei Wi-Fi 7 stands out for exclusive Wi-Fi Shield technology. Specifically, the AP sends extra interference signals as noise to ensure that only the target station (STA) can accurately receive data packets and signals cannot be demodulated at other locations. This prevents malicious users from intercepting the packets, ensuring campus network security.

- A. False
- B. True

Answer: B

Explanation:

Huawei's Wi-Fi 7 AirEngine APs integrate proprietary Wi-Fi Shield technology, which:
Uses spatial beamforming and artificial interference generation to emit "decoy" signals.
These signals act as deliberate noise, preventing nearby attackers from eavesdropping.
The intended recipient (STA) can still demodulate and receive data correctly using signal-processing algorithms.
This adds an additional physical layer of wireless security to protect against passive attacks.
