

# Certified AZ-120 Questions & AZ-120 Valid Dumps Questions

P.S. Free 2026 Microsoft AZ-120 dumps are available on Google Drive shared by PrepPDF: <https://drive.google.com/open?id=1y-xN5sQOtmSgBp3uLr1tKCttQqV-NgH>

Many candidates apply for professional certifications exams because their company has business with relating company. If so our AZ-120 exam guide torrent should be your best helper. Our AZ-120 exam questions help you pass exam soon and certainly so that you can obtain dreaming certifications before other peers. It will be a great opportunity for you to obtain better position even promotion. You can trust our reliable AZ-120 Exam Collection materials as we have high pass rate more than 98%.

## Microsoft AZ-120 Exam Syllabus Topics:

Topic	Details
<b>Migrate SAP Workloads to Azure (25-30%)</b>	

Identify requirements for target infrastructure	<ul style="list-style-type: none"> <li>- estimate target database size</li> <li>- determine supportability of operating systems and databases in Azure</li> <li>- estimate compute, storage, and network requirements for the target database</li> <li>- determine target SAPs by using Early Watch Alert (EWA) reports or Quick Sizer</li> <li>- assess constraints imposed by subscription models and quota limits</li> <li>- recommend licensing and pricing across SAP tiers</li> <li>- recommend components, such as Azure Data Factory, Data Lake, Microsoft Power BI, and SAP Cloud</li> <li>- specify a Microsoft support option for SAP on Azure</li> </ul>
Design and implement identity and access for SAP workloads	<ul style="list-style-type: none"> <li>- design and implement access control and authorization for SAP workloads</li> <li>- design and implement authentication for SAP workloads</li> <li>- manage access permissions to SAP systems</li> <li>- design and implement an SAP migration strategy</li> <li>- choose a migration scenario (lift-and-shift, lift-shift-migrate, lift-shift-migrate to HANA) or green field</li> <li>- choose migration methods</li> <li>- configure storage to support migration</li> <li>- implement an SAP migration</li> </ul>
<b>Design and Implement an Infrastructure to Support SAP Workloads (25–30%)</b>	
Design and implement a compute solution for SAP workloads	<ul style="list-style-type: none"> <li>- specify a compute platform (Azure Virtual Machines versus HANA Large Instances [HLIs])</li> <li>- configure Enhanced Monitoring</li> <li>- configure Accelerated Networking</li> <li>- configure VMs for Availability Sets</li> <li>- configure VMs for Availability Zones</li> <li>- deploy an OS by using the Azure Marketplace</li> <li>- create and deploy a custom image</li> <li>- automate deployment by using ARM templates</li> <li>- connect to an Azure HLI</li> <li>- configure license registration for an Azure HLI</li> <li>- configure and apply operating system updates to an Azure HLI</li> <li>- configure a snapshot</li> </ul>
Design and implement a network topology for SAP on Azure Virtual Machines or Azure HLI	<ul style="list-style-type: none"> <li>- design and configure proximity placement groups</li> <li>- define SAP zones and subnets</li> <li>- design for latency considerations</li> <li>- design for network security</li> <li>- design and implement networking for Azure HLI</li> <li>- plan for the use of Azure Express Route (FastPath versus direct)</li> <li>- optimize networking to minimize latency between/within SAP tiers</li> <li>- configure routing for Azure HLI</li> <li>- design and configure load balancing for a reverse proxy</li> </ul>
Design and implement a storage solution for SAP on Azure Virtual Machine or Azure HLI	<ul style="list-style-type: none"> <li>- specify an appropriate disk option (Managed, Premium, Ultra disk, SOFS with Storage Spaces Direct [SSD], Azure NetApp Files, Azure Shared Managed Disks)</li> <li>- specify when to use disk striping</li> <li>- design for security considerations for storage</li> <li>- design for data protection considerations</li> <li>- design and implement caching for disks</li> <li>- configure Write Accelerator</li> <li>- configure encryption</li> </ul>

## AZ-120 Valid Dumps Questions, Relevant AZ-120 Questions

We have a team of experts curating the real AZ-120 questions and answers for the end users. We are always working on updating the latest AZ-120 questions and providing the correct AZ-120 answers to all of our users. We will provide free updates for 1 year from the date of purchase. You can benefit from the updates AZ-120 Preparation material, and you will be able to pass the AZ-120 exam in the first attempt.

Passing the Microsoft AZ-120 exam can benefit professionals in various roles, including SAP architects, administrators, and consultants. By earning this certification, candidates can demonstrate their ability to implement and manage Azure resources for SAP workloads, which can lead to career advancement and increased earning potential. Moreover, this certification can help organizations improve their SAP deployments by leveraging the scalability, security, and cost-effectiveness of Azure cloud services.

Microsoft AZ-120 is an exam that focuses on the planning and administration of Microsoft Azure for SAP workloads. Planning and Administering Microsoft Azure for SAP Workloads certification is designed to validate the skills of IT professionals who specialize in implementing and managing Microsoft Azure solutions for SAP workloads. AZ-120 exam tests the candidate's knowledge of deploying and managing Azure infrastructure, as well as their ability to optimize performance for SAP applications.

### Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q150-Q155):

#### NEW QUESTION # 150

Your on-premises network contains an Active Directory domain.

You are deploying a new SAP environment on Azure.

You need to configure SAP Single Sign-On to ensure that users can authenticate to SAP GUI and SAP WebGUI.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

- 1 - Change the user profiles for secure network communication (SNC.)
- 2 - Deploy Azure Active Directory Domain Services (Azure AD DS) and sync back to Active Directory.
- 3 - Configuration Secure network communication (SNC) by using SNCWIZARD.
- 4 - Change and deploy the logon file.

#### NEW QUESTION # 151

You have an Azure subscription. The subscription contains a virtual machine named VM1 that runs SAP HANA and a user named User1. User1 is assigned the Virtual Machine Contributor role of VM1.

You need to prevent User1 from placing VM1 in the Stopped (deallocated) state. User1 must be able to restart the operating system on VM1.

What should you do?

- A. Create a resource lock on VM1.
- B. Assign User1 the Virtual Machine User Login role for VM1.
- **C. Configure the Desired State Configuration (DSC) extension on VM1.**
- D. Assign an Azure Policy definition to the resource group that contains VM1.

**Answer: C**

#### NEW QUESTION # 152

You are evaluating the proposed backup policy.

For each of the following statements, select Yes if the statement is true. otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Topic 1, Contoso Ltd Case Study

Overview

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Contoso, Ltd. is a manufacturing company that has 15,000 employees.

The company uses SAP for sales and manufacturing.

Contoso has sales offices in New York and London and manufacturing facilities in Boston and Seattle.

Existing Environment

Active Directory

The network contains an on-premises Active Directory domain named ad.contoso.com. User email addresses use a domain name of contoso.com.

SAP Environment

The current SAP environment contains the following components:

SAP Solution Manager

SAP ERP Central Component (SAP ECC)

SAP Supply Chain Management (SAP SCM)

SAP application servers that run Windows Server 2008 R2

SAP HANA database servers that run SUSE Linux Enterprise Server 12 (SLES 12) Problem Statements Contoso identifies the following issues in its current environment:

The SAP HANA environment lacks adequate resources.

The Windows servers are nearing the end of support.

The datacenters are at maximum capacity.

Requirements

Planned Changes

Contoso identifies the following planned changes:

Deploy Azure Virtual WAN.

Migrate the application servers to Windows Server 2016.

Deploy ExpressRoute connections to all of the offices and manufacturing facilities.

Deploy SAP landscapes to Azure for development, quality assurance, and production.

All resources for the production landscape will be in a resource group named SAPProduction.

Business goals

Contoso identifies the following business goals:

Minimize costs whenever possible.

Migrate SAP to Azure without causing downtime.

Ensure that all SAP deployments to Azure are supported by SAP.

Ensure that all the production databases can withstand the failure of an Azure region.

Ensure that all the production application servers can restore daily backups from the last 21 days.

Technical Requirements

Contoso identifies the following technical requirements:

Inspect all web queries.

Deploy an SAP HANA cluster to two datacenters.

Minimize the bandwidth used for database synchronization.

Use Active Directory accounts to administer Azure resources.

Ensure that each production application server has four 1-TB data disks.

Ensure that an application server can be restored from a backup created during the last five days within 15 minutes.

Implement an approval process to ensure that an SAP administrator is notified before another administrator attempts to make

changes to the Azure virtual machines that host SAP.

It is estimated that during the migration, the bandwidth required between Azure and the New York office will be 1 Gbps. After the migration, a traffic burst of up to 3 Gbps will occur.

Proposed Backup Policy

An Azure administrator proposes the backup policy shown in the following exhibit.

Azure Resource Manager Template

An Azure administrator provides you with the Azure Resource Manager template that will be used to provision the production application servers.

### NEW QUESTION # 153

You have an SAP production landscape on Azure that contains the resources shown in the following table.

You need to stop the SAP services so that you can perform monthly maintenance.

Which command should you run from the Azure Cloud Shell? To answer, select the appropriate options in the answer area NOTE:

Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 154

You have an SAP on Azure production landscape that contains an SAP HANA database. You create a backup policy as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

### NEW QUESTION # 155
