### 問題 #47

Which of the following BEST describes the relationship between Service Level Objectives and Service Level Indicators?

- A. Service level indicators are the performance targets for service level objectives
- B. Service level objectives are the measurements for the service level indicators
- C. Service level objectives are the performance metrics for service level indicators
- **D. Service level indicators are the measurements for the service level objectives**

答案: D

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

The SRE Book provides a precise definition: "SLIs are the carefully defined quantitative measures of some aspect of the level of

service provided. SLOs are the target values or ranges for these indicators." (SRE Book - Chapter: Service Level Objectives). This establishes a clear hierarchical relationship: SLIs are the measurements, while SLOs define the acceptable target levels for those measurements.

Therefore, option A is correct: SLIs measure things like latency, availability, throughput, and error rate.

SLOs then define the goal such as "99.9% availability over 30 days."

Option B reverses the relationship.

Option C incorrectly says SLOs measure SLIs, which is backwards.

Option D confuses metrics and targets.

Thus, A is the only choice that aligns with Google's official SRE definitions.
