ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q1762-Q1767):

NEW QUESTION # 1762

How often should tests and disaster recovery drills be performed?

- A. At least once a year
- B. At least once every 6 months
- C. At least once a quarter
- D. At least once every 2 years

Answer: A

Explanation:

Explanation/Reference:

Explanation:

The drills should take place at least once a year, and the entire program should be continually updated and improved.

Incorrect Answers:

A: Once a quarter would be too much. Once a year is fine.

B: Once every 6 months would be too much. Once a year is fine.

D: Once every 2 years would be enough. Once a year is the recommended frequency.

If an employee transfers from one role to another, which of the following actions should this trigger within the identity and access management (IAM) lifecycle?

- A. New account creation
- B. Deprovisioning
- C. System account access review and adjustment
- D. User access review and adjustment

Answer: D

NEW QUESTION # 1764

An organization plan on purchasing a custom software product developed by a small vendor to support its business model.

Which unique consideration should be made part of the contractual agreement potential long- term risks associated with creating this dependency?

- A. Right to request an independent review of the software source code
- B. A source code escrow clause
- C. Due diligence form requesting statements of compliance with security requirements
- D. Access to the technical documentation

Answer: B

NEW QUESTION # 1765

Drag and Drop Question

Match the types of e-authentication tokens to their description.

Drag each e-authentication token on the left to its corresponding description on the right.

E-Authentication Token

Description

Memorized Secret Token

A physical or electronic token that stores a set of secrets between the claimant and the credential service provider

Out-of-Band Token

A physical token that is uniquely addressable and can receive a verifier-selected secret for one-time use.

Look-up Secret Token

A series of responses to a set of prompts or challenges established by the subscriber and credential service provider during the registration process

Pre-registered Knowledge Token

A secret shared between the subscriber and credential service provider that is typically character strings

Answer:

Explanation:

E-Authentication Token

	Description
Look-up Secret Token	A physical or electronic token that stores a set of secrets between the claimant and the credential service provider
Out-of-Band Token	A physical token that is uniquely addressable and can receive a verifier-selected secret for one-time use
Pre-registered Knowledge Token	A series of responses to a set of prompts or challenges established by the subscriber and credential service provider during the registration process
Memorized Secret Token	A secret shared between the subscriber and credential service provider that is typically character strings

NEW QUESTION # 1766

Which choice below represents an application or system demonstrating a need for a high level of confidentiality protection and controls?

- A. Destruction of the information would require significant expenditures of time and effort to replace. Although corrupted information would present an inconvenience to the staff, most information, and all vital information, is backed up by either paper documentation or on disk.
- B. Unavailability of the system could result in inability to meet payroll obligations and could cause work stoppage and failure of user organizations to meet critical mission requirements. The system requires 24-hour access.
- **C. The application contains proprietary business information and other financial information, which if disclosed to unauthorized sources, could cause an unfair advantage for vendors, contractors, or individuals and could result in financial loss or adverse legal action to user organizations.**
- D. The mission of this system is to produce local weather forecast information that is made available to the news media forecasters and the general public at all times. None of the information requires protection against disclosure.

Answer: C

Explanation:

Although elements of all of the systems described could require specific controls for confidentiality, given the descriptions above, system b fits the definition most closely of a system requiring a very high level of confidentiality. Answer a is an example of a system requiring high availability. Answer c is an example of a system that requires medium integrity controls. Answer d is a system that requires only a low level of confidentiality. A system may need protection for one or more of the following reasons: Confidentiality. The system contains information that requires protection from unauthorized disclosure. Integrity. The system contains information that must be protected from unauthorized, unanticipated, or unintentional modification. Availability. The system contains information or provides services which must be available on a timely basis to meet mission requirements or to avoid substantial losses.
