Free PDF Quiz Unparalleled 156-836 - Check Point Certified Maestro Expert - R81 (CCME) Reliable Exam Voucher

You need to do something immediately to change the situation. For instance, the first step for you is to choose the most suitable 156-836 actual guide materials for your coming exam. so the 156-836 study materials is very important for you exam, because the 156-836 study materials will determine whether you can pass the 156-836 Exam successfully or not. We would like to introduce you our 156-836 exam questions, which is popular and praised as the most suitable and helpful 156-836 study materials in the market.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which distribution mode assigns packets to an SGM based solely on the packet destination IP?

- A. Manual mode
- B. Auto-topology mode
- C. User mode
- D. Network mode

Answer: D

Explanation:

Network mode is the distribution mode that assigns packets to an SGM based solely on the packet destination IP. In this mode, the Orchestrator uses a hash function to map each destination IP to a specific SGM. This mode ensures that all packets with the same destination IP are processed by the same SGM, regardless of the source IP or port. This mode is suitable for scenarios where the destination IP is the main factor for load balancing, such as NAT or VPN.

NEW QUESTION # 56

There are two 10Gbps dual-port NIC installed on a 6800 appliance. Which interfaces should be connected to Orchestrator 1 for downlinks' intra-orchestrator redundancy when using two Orchestrators?

- A. Any pair of available ports
- **B. Port 1 in Slot 1 and Port 1 in Slot 2**
- C. Port 1 in Slot 2 and Port 2 in Slot 1
- D. Port 1 in Slot 1 and Port 2 in Slot 1

Answer: B

Explanation:

The correct interfaces to connect to Orchestrator 1 for downlinks' intra-orchestrator redundancy when using two Orchestrators are Port 1 in Slot 1 and Port 1 in Slot 2. This is because each slot represents a different NIC, and each port represents a different physical link. By connecting two ports from different slots, the appliance can have redundant connections to the same orchestrator, and avoid a single point of failure in case of a NIC or link failure.

NEW QUESTION # 57

What is HealthCheck Point?

- A. Can be used to let you visualize the Firewall topology for the SG and view live statistics, which includes throughput, problem notes, and CPU utilization.
- **B. Performs a system health check and is meant to replace both a CPInfo and the health check script.**
- C. Is a self-updatable suite of tools for MHOs with the capability to assess the health of the system and provide a timeline of critical and informative events that might have occurred in a production system.
- D. Is a self-updatable suite of tools for SGMs with the capability to assess the health of the system, visualize the Firewall topology, provide a timeline of critical and informative events that might have occurred in a production system.

Answer: B

Explanation:

HealthCheck Point (HCP) is a tool designed to perform a comprehensive system health check for the Maestro environment. It is intended to replace both the CPInfo tool and traditional health check scripts by providing a streamlined way to assess the health of Maestro Orchestrators (MHOs) and Security Group Members (SGMs).

HCP evaluates system status, configuration, and potential issues, generating detailed reports for troubleshooting and maintenance. Exact Extract:

"HealthCheck Point (HCP) performs a system health check and is meant to replace both a CPInfo and the health check script. It assesses the health of the Maestro environment, including MHOs and SGMs, by checking system status, configuration settings, and potential issues. HCP provides detailed reports to aid in troubleshooting and maintenance."

-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 4: Using the Command Line Interface and WebUI, Lesson 4.4: System Diagnostics, page 4-15

-Check Point R81 Maestro Administration Guide, Chapter 4: Using the Command Line Interface and WebUI, Section: HealthCheck Point, page 4-12 Explanation of Options:

* A. Is a self-updatable suite of tools for MHOs...: Incorrect, as HCP is not limited to MHOs and does not focus on visualizing topology or event timelines. It is a general health check tool for the entire Maestro environment.

* B. Performs a system health check and is meant to replace both a CPInfo and the health check script:

Correct, as HCP's primary function is to perform system health checks, replacing CPInfo and health check scripts, as per the documentation.

* C. Can be used to let you visualize the Firewall topology...: Incorrect, as HCP does not provide visualization of firewall topology or live statistics like throughput and CPU utilization.

* D. Is a self-updatable suite of tools for SGMs...: Incorrect, as HCP is not exclusive to SGMs and does not include topology visualization or event timeline features.

NEW QUESTION # 59

Maestro allows running commands globally in Expert mode by using global prefixes, such as:

- A. all
- B. asg all
- C. global
- D. g_all

Answer: D

Explanation:

Explanation

The g_all prefix is used to run commands globally in Expert mode on all Security Group Members of the current Security Group.

For example, g_all cpstop will stop the Check Point services on all SGMs. The other prefixes are not valid for global commands in Expert mode.
