2026 Talend Talend-Core-Developer: Talend Core Certified Developer Exam –Reliable Latest Demo

if you want to have a better experience on the real exam before you go to attend it, you can choose to use the software version of our Talend-Core-Developer learning guide which can simulate the real exam, and you can download our Talend-Core-Developer exam prep on more than one computer. We strongly believe that the software version of our Talend-Core-Developer Study Materials will be of great importance for you to prepare for the exam and all of the employees in our company wish you early success.

Talend Core Certified Developer Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47

You are using a tRESTClient component to call a REST service. Which advanced option should you use to convert the response from the server to the document type?

- A. Convert Response To DOM Document
- B. Convert Response To XML Document
- C. Convert Response To JSON Document
- D. Convert Response To HTML Document

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

In Talend Studio, the tRESTClient component includes an advanced setting called "Convert Response To DOM Document". When this option is selected, the response from the REST service is converted into a DOM (Document Object Model) document. This allows for structured processing of the response data within Talend workflows.

NEW QUESTION # 48

Where can you specify the remote JobServer to execute a Job?

- A. Extra tab in the Job view
- B. Job settings section of the Project Settings windows
- C. Run/Debug section in the Preference window
- **D. Target Exec tab in the Run view**

Answer: D

Explanation:

To specify the remote JobServer to execute a job, you need to use the Target Exec tab in the Run view of Talend Studio. The Run view allows you to configure and execute your job from Talend Studio. The Target Exec tab allows you to select whether you want to run your job locally or remotely on a JobServer. A JobServer is a server application that allows you to execute jobs remotely from Talend Studio or Talend Administration Center. To run your job on a remote JobServer, you need to select Remote Jobserver option from the drop-down menu and select or add a JobServer connection from the list.

You do not need to use Job settings section of Project Settings window, Extra tab in Job view, or Run/Debug section in Preferences window. These windows are not used to specify remote JobServer execution. The Job settings section of Project Settings window is used to configure general settings for your jobs, such as versioning, statistics, logs, etc. The Extra tab in Job view is used to configure extra features for your job, such as implicit context load, tStatCatcher, tLogCatcher, etc. The Run/Debug section in Preferences window is used to configure run/debug settings for your Talend Studio, such as JVM arguments, execution mode, etc. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Run view - 7.3], [Project Settings - 7.3], [Job view - 7.3], [Preferences - 7.3]

NEW QUESTION # 49

Which Action on table operations are supported by a tMySQLOutput component? Choose 3 answers.

- **A. Drop table if exists and create**
- B. Drop table
- C. Replace
- **D. Create table**
- **E. Create table if does not exist**

Answer: A,D,E

Explanation:

Comprehensive and Detailed Explanation:

The tMySQLOutput component in Talend provides several actions on tables to manage data output operations effectively. The supported actions include:

* Drop Table if Exists and Create (Option B):

* This action checks if the specified table exists in the database. If it does, the table is dropped and a new one is created. This ensures that the table is recreated fresh for the data load.

* Create Table if Does Not Exist (Option D):

* This action checks if the specified table exists in the database. If it does not exist, the table is created. If it already exists, no action is taken, and the existing table is used.

* Create Table (Option E):

* This action attempts to create the specified table in the database. If the table already exists, an error will occur unless handled appropriately.

These actions provide flexibility in managing database tables during data integration processes, allowing for dynamic table creation and management based on the Job's requirements.

NEW QUESTION # 50

Which methods can you use to specify the schema in a tFileInputDelimited component? Choose 3 answers.

- A. Drag a generic schema metadata item onto the Designer.
- B. Add the component, open the Component view, select the Built-in schema type, then click the Edit schema button.
- C. Add the schema to the component using the Schema Editor.
- D. Add the component, then drag and drop a generic schema metadata item onto the component.
- E. Drag a File delimited metadata item from the Repository onto the design workspace.

Answer: B,D,E

Explanation:

In Talend Studio, there are multiple methods to specify the schema for a tFileInputDelimited component. The three primary approaches include:

A: Add the component, open the Component view, select the Built-in schema type, then click the Edit schema button.

* Process:

* Add the Component:

* Drag and drop the tFileInputDelimited component onto the design workspace.

* Access Component View:

* Click on the component to open its Basic settings in the Component view.

* Select Built-in Schema Type:

* Under the 'Schema' section, choose 'Built-In' from the 'Property Type' dropdown menu.

* Edit Schema:

* Click the 'Edit schema' button to define the schema structure by adding columns and specifying their data types.

NEW QUESTION # 51

Which methods can you use to name an output row in a tMap component? Choose 3 answers.

- A. Assign the name when connecting a new output component.
- B. Select the output row, then open the Component view and click the View tab.
- C. Assign the name when defining a new output table in the Map Editor window.
- D. Click the name of the table in the Map Editor window and edit it.
- E. Double-click the output row in the Designer and enter a new name.

Answer: A,C,D

Explanation:

In a tMap component, naming an output row correctly helps in managing data flow efficiently. The correct methods are:

* A. Click the name of the table in the Map Editor window and edit it.

* Open tMap, locate the output table, and click its name to edit it directly.

* B. Assign the name when defining a new output table in the Map Editor window.

* When adding a new output table, you can name it immediately in the Map Editor.

* D. Assign the name when connecting a new output component.

* When you connect an output component to tMap, you can assign a custom row name.

NEW QUESTION # 52

.....
