## Updated 1Y0-204 Practice Exam Questions

With the rapid development of information the global information has already entered into the age of which that computer network is the core. 1Y0-204 certification test answers help people who are interested in computer network get a stepping stone to a good job. Many workers know obtaining a Citrix certification means a good job with high salary, good benefit and better life. 1Y0-204 Certification Test Answers will be of important for you.

## How to study the Citrix Virtual Apps and Desktops 7 Administration | 1Y0-

ValidTorrent expert team recommends you to prepare some notes on these topics along with it don't forget to practice Citrix ADC 13 Essentials and Traffic Management exam which been written by our expert team, Both these will help you a lot to clear this exam with good marks. ValidTorrent assure exactness of **CITRIX 1Y0-204 Practice Test** for this exam.

## Citrix Virtual Apps and Desktops 7 Administration Sample Questions (Q67-Q72):

### NEW QUESTION # 67

Scenario: A Citrix Administrator has configured the Citrix ADC as a DNS Proxy Server. The administrator executed the commands in the screenshot on the Citrix ADC using the command-line interface.

Click on the 'Exhibit' button to view the screenshot of the command-line interface.

```
>
>add responder action Act_1 respondwidth DNS.NEW_RESPONSE(true, true, NOERROR)
Done
> add responder policy Pol_1 dns.REQ_TRANSPORT.EQ(udp) Act_1
Done
> bind lb vserver DNS -policyName Pol_1 -type request -priority 100
```

What will be the effect of this configuration?

- **A. Create a DNS Response with TC bit set and rcode as NOERROR**
- B. Set TC bit and rcode as NOERROR in the DNS Request from Client
- C. Set TC bit and rcode as NOERROR in the DNS Response from DNS server
- D. Create a DNS Request with TC bit set and rcode as NOERROR

**Answer: A**

Explanation:

The commands in the screenshot create a responder action and policy that modify the DNS response from the Citrix ADC to the client. The responder action uses the DNS.NEW\_RESPONSE function, which creates a new DNS response with the specified parameters. The first parameter is true, which means the response will have the TC (truncated) bit set. The second parameter is true, which means the response will have the AA (authoritative answer) bit set. The third parameter is NOERROR, which means the response will have the rcode (response code) set to NOERROR. The responder policy matches the DNS requests that use UDP as the transport protocol and applies the responder action to them. Therefore, the effect of this configuration is to create a DNS response with TC bit set and rcode as NOERROR for UDP requests. This can be used to prevent DNS amplification attacks by limiting the size of the DNS response.

### NEW QUESTION # 68

When creating a new Delegated Administrator with a custom scope, a Citrix Administrator notices that the Full Administrator role is NOT available.

The administrator is experiencing this behavior because the custom scope \_\_\_\_\_. (Choose the correct option to complete the sentence.)

- A. created did NOT contain all the required objects
- B. was created with the hosting object selected
- C. must use the Read Only role
- **D. cannot use the Full Administrator role**

**Answer: D**

Explanation:

Explanation

When creating a custom scope, the Full Administrator role is not available because custom scopes are designed to limit administrators' permissions to specific objects or tasks within the Citrix environment.

### NEW QUESTION # 69

Scenario: A Citrix Administrator is in the process of migrating the existing 7.15 LTSR Virtual Delivery Agent (VDA) machines used on premises to Citrix Cloud. The administrator has created a new manual machine catalog and Delivery Group in Citrix Cloud and

pointed to the existing Device Collection in Citrix Provisioning. The administrator also restarted the VDA machines. What could prevent the VDA machines from registering in Citrix Cloud?

- A. The VDA master image was NOT updated to communicate with the Cloud Connectors.
- B. The VDA on the master image has NOT been updated to a later version.
- C. One of the two Cloud Connectors is down and unresponsive.
- D. The Citrix policies have NOT been migrated to Citrix Cloud.

Answer: A

#### NEW QUESTION # 70

A Citrix Administrator has executed the commands in the screenshot on the Citrix ADC using the command-line interface. Click on the 'Exhibit' button to view the screenshot of the command-line interface.

```
>
> add transform profile prof_url_change
Done
> add transform action "URL change" prof_url_change 10
Done
> set transform action "URL change" -priority 10 -reqUrlFrom "https://*" -reqUrlInto
"http://*" -resUrlFrom "http://*" -resUrlInto "https://*"
Done
> add transform policy pol_url_change true prof_url_change
Done
> bind lb vserver LB_vserver -policyName pol_url_change -priority 100 -
gotoPriorityExpression END -type REQUEST
```

Which two replacements will be the outcome of executing these commands? (Choose two.)

- A. https://  
will be replaced by http:// in the HTTP REQUEST
- B. http://  
will be replaced by https:// in the HTTP REQUEST
- C. http://  
will be replaced by https:// in the HTTP RESPONSE
- D. https://  
will be replaced by http:// in the HTTP RESPONSE

Answer: A,D

#### NEW QUESTION # 71

Scenario: A Citrix Administrator has executed the following command:

```
set cs vserver Vserver-CS-1 -caseSensitive ON
add cs action CS_Act_1 -targetLBVserver MYVPN_http
add cs policy CS_Pol_1 -rule "http.REQ.HOTSNAME.CONTAINS(\"server.citrix.lab\")" -action CS_Act_1
bind cs vserver CS_vserver1 -policyName CS_Pol_1 -priority 100
```

What will be the outcome of this configuration?

- A. The users trying to access HTTP://SERVER.CITRIX.LAB will be connected to CS Vserver Vserver-CS-1.
- B. The users trying to access HTTP://SERVER.CITRIX.LAB will be connected to the Vserver MYVPN\_http.
- C. The users trying to access HTTP://SERVER.CITRIX.LAB will NOT be connected to the Vserver MYVPN\_http.
- D. The users trying to access http://server.citrix.lab will be connected to CS Vserver Vserver-CS-1.

Answer: B

Explanation:

According to the Citrix documentation, the command `bind cs vserver MYVPN_http -lbvserver Vserver-CS-1` binds a load balancing virtual server to a content switching virtual server. This means that the content switching virtual server will forward the requests that match its policies to the load balancing virtual server. In this case, the content switching virtual server MYVPN\_http has a policy that matches requests for `http://server.citrix.lab`, so it will forward those requests to the load balancing virtual server

Vserver-CS-1. Therefore, the users trying to access <http://server.citrix.lab> will be connected to the Vserver MYVPN\_http, which will then connect them to Vserver-CS-1.
