

2V0-13.25 Test Collection Pdf, Free 2V0-13.25 Updates

[Pass VMware 2V0-13.25 Exam | Latest 2V0-13.25 Dumps & Practice Exams - Cert007](#)

C. Improved performance
 D. Enhanced security
Answer: B, C, D
Explanation:
 Firmware and driver updates improve performance, fix bugs, and enhance security in VMware environments.

19. Which Broadcom solutions are most important for optimizing network performance in VMware?
 A. Broadcom 25GbE Ethernet Adapter
 B. Broadcom 10GbE Ethernet Adapter
 C. VMware vSwitch
 D. VMware NSX
Answer: A
Explanation:
 The Broadcom 25GbE Ethernet Adapter is essential for optimizing network performance in VMware.

20. Which Broadcom technologies are vital for improving network connectivity in VMware Cloud Foundation?
 A. Broadcom Ethernet adapters
 B. Broadcom NVMe SSDs
 C. Broadcom Fibre Channel HBAs
 D. Broadcom RAID controllers
Answer: A
Explanation:
 Broadcom Ethernet adapters improve network connectivity in VMware Cloud Foundation.

21. Which troubleshooting steps should be taken when VMware network performance is slow with Broadcom Ethernet adapters?
 A. Check network cable quality
 B. Verify network switch configurations
 C. Check the NIC driver version
 D. Disable network offloading features
Answer: A, B, C
Explanation:
 Checking the NIC driver, switch configurations, and cable quality are essential troubleshooting steps for network performance.

22. Which VMware solutions, combined with Broadcom hardware, are essential for building an efficient storage architecture?
 A. Broadcom NVMe SSD
 B. Broadcom RAID Controller
 C. 25GbE Ethernet Adapter
 D. vSAN
Answer: A, B, D

P.S. Free 2026 VMware 2V0-13.25 dumps are available on Google Drive shared by VCEPrep: <https://drive.google.com/open?id=1FhcUe6Fh6PtYCAfēB952AjLOu3k3efRk>

The Desktop VMware 2V0-13.25 Practice Exam Software contains real VMware 2V0-13.25 exam questions. This provides you with a realistic experience of being in an VMware 2V0-13.25 examination setting. This feature assists you in becoming familiar with the layout of the VMware 2V0-13.25 test and enhances your ability to do well on VMware Cloud Foundation 9.0 Architect (2V0-13.25) examination.

VMware 2V0-13.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.

Topic 2	<ul style="list-style-type: none"> • Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.
Topic 3	<ul style="list-style-type: none"> • VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.
Topic 4	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.
Topic 5	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.

Free 2V0-13.25 Updates & 2V0-13.25 Examcollection

We offer you free update for one year for 2V0-13.25 study guide, namely, in the following year, you can obtain the latest version for free. And the latest version for 2V0-13.25 exam dumps will be sent to your email automatically. In addition, 2V0-13.25 exam materials are high quality, since we have experienced experts to compile and verify them, therefore the quality and accuracy can be guaranteed, so you can use them at ease. We have online and offline chat service, and if you have any questions about 2V0-13.25 Exam Dumps, you can consult us, and we will give you reply as quickly as possible.

VMware Cloud Foundation 9.0 Architect Sample Questions (Q70-Q75):

NEW QUESTION # 70

An architect is collaborating with a client to design a VMware Cloud Foundation (VCF) solution required for a highly secure infrastructure project that must remain isolated from all other virtual infrastructures. The client has already acquired six high-density vSAN-ready nodes, and there is no budget to add additional nodes throughout the expected lifespan of this project. Assuming capacity is appropriately sized, which VCF architecture model and topology should the architect suggest?

- A. Single Instance Consolidated architecture model
- B. Single Instance - Single Availability Zone Standard architecture model
- C. Multiple Instance - Single Availability Zone Standard architecture model
- D. Single Instance - Multiple Availability Zone Standard architecture model

Answer: B

Explanation:

VMware Cloud Foundation (VCF) 5.2 offers various architecture models (Consolidated, Standard) and topologies (Single/Multiple Instance, Single/Multiple Availability Zones) to meet different requirements. The client's needs-high security, isolation, six vSAN-ready nodes, and no additional budget-guide the architect's choice.

Let's evaluate each option:

Option A: Single Instance - Multiple Availability Zone Standard architecture model This model uses a single VCF instance with separate Management and VI Workload Domains across multiple availability zones (AZs) for resilience. It requires at least four

nodes per AZ (minimum for vSAN HA), meaning six nodes are insufficient for two AZs (eight nodes minimum). It also increases complexity and doesn't inherently enhance isolation from other infrastructures. This option is impractical given the node constraint.

Option B: Single Instance Consolidated architecture model

The Consolidated model runs management and workload components on a single cluster (minimum four nodes, up to eight typically). With six nodes, this is feasible and capacity-efficient, but it compromises isolation because management and user workloads share the same infrastructure. For a "highly secure" and "isolated" project, mixing workloads increases the attack surface and risks compliance, making this less suitable despite fitting the node count.

Option C: Single Instance - Single Availability Zone Standard architecture model This is the correct answer. The Standard model separates management (minimum four nodes) and VI Workload Domains (minimum three nodes, but often four for HA) within a single VCF instance and AZ. With six nodes, the architect can allocate four to the Management Domain and two to a VI Workload Domain (or adjust based on capacity). A single AZ fits the budget constraint (no extra nodes), and isolation is achieved by dedicating the VCF instance to this project, separate from other infrastructures. The high-density vSAN nodes support both domains, and security is enhanced by logical separation of management and workloads, aligning with VCF 5.2 best practices for secure deployments.

Option D: Multiple Instance - Single Availability Zone Standard architecture model Multiple VCF instances (e.g., one for management, one for workloads) in a single AZ require separate node pools, each with a minimum of four nodes for vSAN. Six nodes cannot support two instances (eight nodes minimum), making this option unfeasible given the budget and hardware constraints.

Conclusion:
The Single Instance - Single Availability Zone Standard architecture model (Option C) is the best fit. It uses six nodes efficiently (e.g., four for Management, two for Workload), ensures isolation by dedicating the instance to the project, and meets security needs through logical separation, all within the budget limitation.

NEW QUESTION # 71

What are the best practices for troubleshooting VMware storage performance with Broadcom hardware?

- A. Ensure RAID controller firmware is up to date
- B. Monitor storage I/O metrics
- C. Reset RAID controller configuration
- D. Check disk health and RAID status

Answer: A,B,D

Explanation:

Disk health, I/O metrics, and firmware updates are essential to resolving storage performance issues.

NEW QUESTION # 72

Which VMware tools are essential for ensuring cloud security in VMware Cloud Foundation?

- A. VMware NSX
- B. VMware vRealize Automation
- C. VMware vSphere
- D. VMware vSAN

Answer: A,B

Explanation:

VMware NSX and vRealize Automation are essential tools for ensuring cloud security in VMware Cloud Foundation.

NEW QUESTION # 73

An architect is responsible for designing a new VMware Cloud Foundation (VCF)-based Private Cloud solution. During the requirements gathering workshop with key customer stakeholders, the following information was captured:

* The solution must ensure that all components meet a software version of N-1.

- A. Security
- B. Availability

- C. Manageability
- D. Recoverability

Answer: A

Explanation:

The requirement to maintain software at N-1 versioning ensures that all components in the system maintain the most recent stable version of software while avoiding risks associated with "bleeding-edge" updates. This is a Security design quality because N-1 compliance mitigates exposure to vulnerabilities that might be present in older, unsupported versions. Additionally, VMware Cloud Foundation emphasizes maintaining the full stack within a supported compatibility matrix, aligning with security and compliance frameworks.

NEW QUESTION # 74

Which features of VMware Cloud Foundation help ensure compliance in hybrid cloud environments?

- A. VMware NSX
- B. VMware vRealize Automation
- C. VMware vSphere
- D. VMware vSAN

Answer: A,B

Explanation:

VMware vRealize Automation and NSX help ensure compliance in hybrid cloud environments within VMware Cloud Foundation.
