Whether you are a student or a professional who has already taken part in the work, you must feel the pressure of competition now. However, no matter how fierce the competition is, as long as you have the strength, you can certainly stand out. And our PAP-001 exam questions can help on your way to be successful. Our data shows that 98% to 100% of our worthy customers passed the PAP-001 Exam and got the certification. And we believe you will be the next one as long as you buy our PAP-001 study guide.

Ping Identity Certified Professional - PingAccess Sample Questions (Q22-Q27):

NEW QUESTION # 22

An internal audit reveals that an agent has been compromised. What action must be taken to re-secure the agent?

- A. Download and apply a newagent.propertiesfile
- B. Reinstall the agent
- C. Change theagent.engine.configuration.shared.secretvalue in theagent.propertiesfile
- D. Select a new Agent Trusted Certificate

Answer: A

Explanation:

When a PingAccess agent is compromised, the secure approach is to invalidate the existing credentials and issue a new configuration file from the PingAccess Admin Console. This provides a fresh agent.propertiesfile with new secrets, ensuring compromised keys cannot be reused.

Exact Extract:

"If an agent is compromised, revoke and regenerate the agent configuration by downloading a newagent.propertiesfile from the administrative console."

* Option A is incorrect - manually changing the secret in the file does not propagate it to PingAccess.

* Option B is incorrect - trusted certificates are not tied to agent authentication.

* Option C is unnecessary - reinstalling the agent does not reset credentials.

* Option D is correct - downloading a newagent.propertiesfile re-secures the agent.

NEW QUESTION # 23

An administrator needs to prevent PingAccess from automatically starting on a Windows Server. Which command would accomplish this task?

- A. init.bat
- B. remove-install.bat
- C. wrapper-service.bat
- D. uninstall-service.bat

Answer: D

Explanation:

PingAccess installs as a Windows service. To remove or prevent automatic startup, the uninstall-service.bat script is used.

Exact Extract:

"On Windows, use install-service.bat to install PingAccess as a service and uninstall-service.bat to remove the service."

* Option A (init.bat) initializes environment variables but does not manage services.

* Option B (uninstall-service.bat) is correct - it removes the Windows service, preventing auto-start.

* Option C (remove-install.bat) is not a valid PingAccess script.

* Option D (wrapper-service.bat) configures wrapper options, not service removal.

Reference: PingAccess Installation Guide - Windows Service Scripts

NEW QUESTION # 24

What is the purpose of the pa.operational.mode configuration setting?

- A. To determine the role the server performs in a cluster

- B. To determine whether a server is a development or production server
- C. To determine if a cluster node is enabled or disabled
- D. To determine if a server should participate in cluster replication

Answer: A

Explanation:

The `pa.operational.mode` property in `run.properties` defines the role of the node in a PingAccess deployment (e.g., `STANDALONE`, `CLUSTERED_CONSOLE`, `CLUSTERED_CONSOLE_REPLICA`, `ENGINE`).

Exact Extract:

"The `pa.operational.mode` property determines the role of the server in the cluster, such as standalone, console, console replica, or engine."

- * Option A is incorrect - replication is implicit in certain roles, not controlled directly.
- * Option B is correct - the setting specifies whether the node is admin console, replica, or engine.
- * Option C is incorrect - development vs production is not a function of this setting.
- * Option D is incorrect - it does not enable/disable nodes.

NEW QUESTION # 25

An administrator must onboard a new application from the application team. The application has multiple paths that will need different rules. What would be the first step in this process?

- **A. Application**
- B. Resource
- C. Identity mapping
- D. Web session

Answer: A

Explanation:

All onboarding in PingAccess begins with defining an Application. Once the application exists, the administrator can define Resources within it and assign different rules to those resources.

Exact Extract:

"Before you can configure resources and rules, you must first create an application in PingAccess."

- * Option A (Identity Mapping) may be required later but not the first step.
- * Option B (Web Session) can be shared but is not the first onboarding step.
- * Option C (Application) is correct - the starting point for onboarding.
- * Option D (Resource) comes after creating the application.

NEW QUESTION # 26

A PingAccess API deployment requires multiple Access Token Managers to maintain compliance with customer requirements. Which feature must be set on the Token Provider configuration?

- **A. Send Audience**
- B. Use Token Introspection Endpoint
- C. Subject Attribute Name
- D. Client Secret

Answer: A

Explanation:

When using multiple Access Token Managers, the `Send Audience` option ensures that tokens are scoped properly and validated against the intended resource/application.

Exact Extract:

"Enable `Send Audience` in the token provider configuration to support environments with multiple Access Token Managers and enforce correct audience restrictions."

- * Option A (Subject Attribute Name) is unrelated - it maps user identity but not token manager selection.
- * Option B (Send Audience) is correct - required when multiple ATMs are in use.

* Option C (Use Token Introspection Endpoint) is optional and depends on deployment, not mandatory for multiple ATMs.

* Option D (Client Secret) is part of OAuth client credentials, not specific to multiple ATMs.
