Oracle Data Platform 2025 Foundations Associate Sample Questions (Q12-Q17):

NEW QUESTION # 12

Which command for the MySQL Data Service will resume OCPU billing?

- A. Backup
- B. Stop
- C. Restart
- **D. Start**

Answer: D

Explanation:

For the "MySQL Database Service," the "Start" command (A) resumes OCPU billing, as it activates the database instance, incurring compute costs. "Stop" (B) halts billing by suspending the instance, "Restart" (C) is a stop-then-start sequence, and "Backup" (D) affects storage, not OCPU billing. Oracle's MySQL Service documentation ties billing to the Start command.

NEW QUESTION # 13

Which ADB tool can you use to discover anomalies, outliers, and hidden patterns in your data?

- A. Data Transforms
- **B. Data Insights**
- C. Data Load
- D. Catalog

Answer: B

Explanation:

In the Autonomous Database (ADB), "Data Insights" (B) is the tool to discover anomalies, outliers, and hidden patterns, leveraging built-in AI and ML capabilities to analyze data. "Data Load" (A) is for importing data, "Data Transforms" (C) is for data preparation, and "Catalog" (D) is for metadata (OCI Data Catalog). Oracle's documentation identifies Data Insights for pattern detection.

NEW QUESTION # 14

Which workload CANNOT be run on Oracle Database 19c?

- A. Hadoop Clusters
- B. Gaming
- C. Machine Learning
- D. Translytical

Answer: A

Explanation:

"Oracle Database 19c" supports "Machine Learning" (A) via in-database algorithms, "Translytical" (B) workloads combining transactional and analytical processing, and "Gaming" (C) through high-performance transaction support. However, "Hadoop Clusters" (D) cannot run directly on 19c, as Hadoop is a distributed framework requiring a separate ecosystem (e.g., Oracle Big Data Service), not a workload natively supported within the database engine. Oracle's 19c documentation details its converged database capabilities, excluding Hadoop as a direct workload.

NEW QUESTION # 15

What are two important reasons to upgrade and patch?

- A. Security
- B. Support Compliance
- C. Validation of application
- D. Restructure the database

Answer: A,B

Explanation:

Two important reasons to upgrade and patch are "Support Compliance" (A), ensuring the database remains under Oracle's support policy with access to updates, and "Security" (C), applying patches to mitigate vulnerabilities and protect data. "Validation of application" (B) is a byproduct, not a primary reason, and "Restructure the database" (D) is unrelated to patching. Oracle's maintenance guides emphasize compliance and security as key drivers.

NEW QUESTION # 16

A customer wants to use Oracle Cloud Infrastructure (OCI) for storing application backups which can be stored for months, but retrieved immediately based on business needs. Which OCI storage service can be used to meet this requirement?

- A. File Storage
- B. Object Storage (standard)
- C. Archive Storage
- D. Block Volume

Answer: B

Explanation:

For storing application backups that need to be "stored for months, but retrieved immediately," "Object Storage (standard)" (A) is the suitable OCI service. Standard Object Storage offers durable, scalable storage with immediate access, ideal for backups requiring quick retrieval. "Archive Storage" (B) is cheaper but has retrieval delays, unsuitable for immediate access. "File Storage" (C) is for shared file systems, and "Block Volume" (D) is for high-performance attached storage, both less suited for long-term backups. Oracle's OCI Storage documentation confirms Standard Object Storage for this use case.
