

Juniper JN0-481 Valid Test Sims & JN0-481 Examcollection Vce

P.S. Free & New JN0-481 dumps are available on Google Drive shared by PracticeDump: https://drive.google.com/open?id=1PLoYr0jzUH469D7ErlCnyPWH_RXXVJZQ

We believe that the best brands of JN0-481 study materials are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Therefore, our company as the famous brand, even though we have been very successful in providing JN0-481 practice guide we have never satisfied with the status quo, and always be willing to constantly update the contents of our JN0-481 Exam Torrent in order to keeps latest information about JN0-481 exam. With our JN0-481 exam questions, you can pass the JN0-481 exam and get the dreaming certification.

Juniper JN0-481 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Center Architectures (IP Fabrics, EVPN-VXLAN): Covers spine-leaf topology design, ECMP load balancing, and underlay• overlay routing, along with EVPN and VXLAN concepts including route types, bridge domains, VNI-to-VLAN mapping, and VTEP functions.
Topic 2	<ul style="list-style-type: none">• Intent-Based Analytics: Covers Apstra's analytics tools including Graph Explorer, graph queries, and intent-based analytics probes for network monitoring, validation, and troubleshooting.
Topic 3	<ul style="list-style-type: none">• Juniper Apstra Architecture: Introduces core Apstra components including the server, device agents, and UI, along with administrative features such as RBAC, event logging, and syslog.

First-grade JN0-481 Valid Test Sims for Real Exam

If you don't work hard to improve your strength, you can't get the chance you want. Without chance, you will not be able to obtain your desired status and salary. This society is such a reality. It is also fair. Every year, many people purchase our JN0-481 study materials. With the help of our JN0-481 Exam Braindumps, they successfully passed the exam and got the certification, and became more and more successful than before. So if you buy our JN0-481 practice questions, you will have a brighter future!

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q55-Q60):

NEW QUESTION # 55

How does Intent-Based Analytics align with the principles of intent-based networking in terms of data exploration and analysis?

- A. By managing employee property allocations in the data center
- B. By predicting future changes in the network environment
- C. By facilitating dynamic queries for intent-based data exploration
- D. By providing real-time weather updates for the data center location

Answer: C

NEW QUESTION # 56

At which point in the design process does the operator choose IPv4 or IPv6 for a spine-and-leaf link underlay type?

- A. when designing a new rack type
- B. when creating a blueprint
- C. when selecting an IP pool
- D. when creating a template

Answer: B

Explanation:

In Juniper Apstra, the choice of IPv4 or IPv6 for the spine-and-leaf underlay is made during blueprint creation. At this stage, the operator defines the fundamental design parameters of the fabric, including the underlay addressing type, which then determines how IP pools are allocated to inter-device links.

NEW QUESTION # 57

You are installing a Juniper Apstra server in your data center. You have multiple users that will be expected to configure, manage, and carry out operational tasks in your data center. You have decided to implement remote user authentication for the role-based access control of your Apstra server. In this scenario, which three methods are supported? (Choose three.)

- A. LDAP
- B. Auth0
- C. SAML
- D. RADIUS
- E. TACACS+

Answer: A,D,E

Explanation:

To implement remote user authentication for the role-based access control of your Apstra server, you can use one of the following methods: TACACS+, LDAP, or RADIUS. These are the protocols that Juniper Apstra supports to authenticate and authorize users based on roles assigned to individual users within an enterprise. You can configure the Apstra server to use one or more of these protocols as the authentication sources and specify the order of preference. You can also configure the Apstra server to use local user accounts as a fallback option if the remote authentication fails.

NEW QUESTION # 58

Juniper Apstra provides five different predefined user roles. Given this information, what is the main difference between the administrator and the user role?

- A. The user role can make changes to any other role.

- B. The user role can only make changes to the view role.
- **C. The user role cannot make any changes to other user types.**
- D. The user role can only be assigned to specific blueprints.

Answer: C

Explanation:

Apstra role-based access control separates fabric operations from identity and authorization administration. The administrator role includes full permissions, including the ability to manage users and roles (for example, creating users, assigning permissions, and creating/cloning/editing custom roles where allowed). This enables administrators to govern who can access the system and what they are permitted to change across all blueprints and system settings.

The user role, in contrast, is designed for day-to-day fabric work: viewing and editing supported blueprint elements and operational objects within the scope permitted by the role, but not administering other users' access or modifying the role structure itself. In other words, a user can work on the network intent and operations, but cannot elevate privileges, change other users' roles, or otherwise manage user/role administration unless explicitly granted additional permissions through custom roles.

That makes option C the correct statement: the user role cannot make changes to other user types (that is, it lacks the permissions needed to administer identities/roles). Options A, B, and D do not reflect Apstra's RBAC model: roles are not primarily constrained "per blueprint" in that way, and users are not intended to modify other roles-those are administrator-level capabilities.

NEW QUESTION # 59

Referring to the exhibit, when you create the virtual network, which another component is automatically created by Juniper Apstra?

- A. IP pool
- B. VLAN pool
- C. routing zone
- **D. connectivity template**

Answer: D

Explanation:

As shown in the exhibit, the "Create Connectivity Templates for" option is checked (for Untagged), which means Juniper Apstra will automatically generate a connectivity template along with the creation of the virtual network. This template allows the new virtual network to be easily applied to interfaces across the fabric.

NEW QUESTION # 60

.....

Are you worried about insufficient time to prepare the exam? Do you have a scientific learning plan? Maybe you have set a series of to-do list, but it's hard to put into practice for there are always unexpected changes during the JN0-481 exam. Here we recommend our JN0-481 test prep to you. With innovative science and technology, our study materials have grown into a powerful and favorable product that brings great benefits to all customers. Under the support of our JN0-481 Study Materials, passing the JN0-481 exam won't be an unreachable mission.
