We offer free demos and updates if there are any for your reference beside real 156-587 real materials. By downloading the free demos you will catch on the basic essences of our 156-587 guide question and just look briefly at our practice materials you can feel the thoughtful and trendy of us. About difficult or equivocal points, our experts left notes to account for them. To fill the void, we simplify the procedures of getting way, just place your order and no need to wait for arrival of our 156-587 Exam Dumps or make reservation in case people get them all, our practice materials can be obtained with five minutes.

CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q14-Q19):

NEW QUESTION # 14

What process monitors, terminates, and restarts critical Check Point processes as necessary?

- A. FWD
- **B. CPVVD**
- C. FWM
- D. CPM

Answer: B

NEW QUESTION # 15

What command would you run to verify the communication between the Security Gateway and the Identity Collector?

- A. fw ctl debug -m IDAPI
- **B. pdp connections idc**
- C. adlog
- D. fw ctl debug -m fw + nac

Answer: B

NEW QUESTION # 16

How can you start debug of the Unified Policy with all possible flags turned on?

- A. fw ctl debug -m UP *
- B. fw ctl debug -m UnifiedPolicy all
- C. fw ctl debug -m fw + UP
- **D. fw ctl debug -m UP all**

Answer: D

NEW QUESTION # 17

RAD is initiated when Application Control and URL Filtering blades are active on the Security Gateway. What is the purpose of the following RAD configuration file \$FWDIR/conf/rad_settings.C?

- A. This file contains all the host name settings for the online application detection engine
- B. This file contains the location information for Application Control and/or URL Filtering entitlements
- C. This file contains the information on how the Security Gateway reaches the Security Management Server's RAD service for Application Control and URL Filtering
- **D. This file contains RAD proxy settings**

Answer: D

Explanation:

The Resource Application Daemon (RAD) is a critical component in Check Point's Application Control and URL Filtering blades, responsible for processing and categorizing web traffic. The configuration file \$FWDIR/conf/rad_settings.C on the Security Gateway defines settings related to RAD's operation.

Option A: Incorrect. The rad_settings.C file does not store entitlement information for Application Control or URL Filtering. Entitlements are managed by the Security Management Server and stored in licensing databases, not in this file.

Option B: Incorrect. The rad_settings.C file does not specify how the Security Gateway communicates with the Security Management Server's RAD service. Communication settings are typically handled by SIC (Secure Internal Communication) and other configuration files, such as \$FWDIR/conf/fwopsec.conf.

Option C: Correct. The rad_settings.C file contains proxy settings for the RAD daemon, such as HTTP proxy configurations used for accessing external services (e.g., Check Point's online URL Filtering database). This is critical when the Gateway requires a proxy to reach external resources for URL categorization.

Option D: Incorrect. Hostname settings for the online application detection engine are not stored in rad_settings.C. These are typically managed by the Application Database (application_db.C) or resolved via DNS.

Reference:

The Check Point R81.20 Security Gateway Administration Guide discusses the RAD daemon and its configuration, noting that \$FWDIR/conf/rad_settings.C is used for proxy settings related to Application Control and URL Filtering. The CCTE R81.20 course covers troubleshooting Application Control and URL Filtering, including the role of configuration files like rad_settings.C. For precise details, refer to:

Check Point R81.20 Security Gateway Administration Guide, section on "Application Control and URL Filtering" (available via Check Point Support Center).

CCTE R81.20 Courseware, which includes modules on RAD configuration and troubleshooting (available through authorized training partners like Arrow Education or Red Education).

NEW QUESTION # 18

What is the proper command for allowing the system to create core files?

- A. service core-dump start
- **B. set core-dump enable**
 >save config
- C. # set core-dump enable
 # save config
- D. SFWDIR/scripts/core-dump-enable.sh

Answer: B

NEW QUESTION # 19

.....

In order to cater to the different needs of people from different countries in the international market, we have prepared three kinds of versions of our 156-587 learning questions in this website. And we can assure you that you will get the latest version of our 156-587 Training Materials for free from our company in the whole year after payment on 156-587 practice quiz. Last but not least, we will provide the most considerate after sale service for our customers on our 156-587 exam dumps.

156-587 Exam Registration: <https://www.dumpstorrent.com/156-587-exam-dumps-torrent.html>

We guarantee that nothing will stop you from earning the esteemed CheckPoint Certification Exam on your first attempt if you diligently prepare with our 156-587 real exam questions.
