If you buy our SAVIGA-C01 study tool successfully, you will have the right to download our SAVIGA-C01 exam torrent in several minutes, and then you just need to click on the link and log on to your website's forum, you can start to learn our SAVIGA-C01 question torrent. We believe the operation is very convenient for you, and you can operate it quickly. At the same time, we believe that the convenient purchase process will help you save much time. More importantly, we provide all people with the trial demo for free before you buy our SAVIGA-C01 Exam Torrent and it means that you have the chance to download from our web page for free; you do not need to spend any money.

Saviynt SAVIGA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Architecture: Saviynt IGA Administrators are expected to understand the overall architecture of the Saviynt IGA platform in this section. It covers system components, integration points, and deployment models.
Topic 2	<ul style="list-style-type: none">Saviynt IGA Administration: Saviynt IGA Administrators are expected to demonstrate proficiency in administering the Saviynt IGA platform. This section covers user management, role management, and system configuration.

Topic 3	<ul style="list-style-type: none"> Analytics: Saviynt IGA Administrators are expected to demonstrate knowledge of analytics capabilities in the Saviynt IGA platform. This section covers reporting, dashboards, and data analysis techniques.
Topic 4	<ul style="list-style-type: none"> SoDs: Saviynt IGA Administrators are expected to demonstrate proficiency in Segregation of Duties (SoD) management. This section covers SoD rule creation, conflict detection, and mitigation strategies.
Topic 5	<ul style="list-style-type: none"> Identity Warehouse: Saviynt IGA Professionals are expected to showcase their understanding of the Identity Warehouse concept in this section. It covers data modeling, identity reconciliation, and data synchronization.
Topic 6	<ul style="list-style-type: none"> Saviynt IGA Implementation: This section focuses on the implementation aspects of Saviynt IGA solutions. It covers deployment strategies, integration with existing systems, and customization techniques.
Topic 7	<ul style="list-style-type: none"> Implement IGA Solutions: This section focuses on the practical implementation of IGA solutions using Saviynt. It covers project planning, requirements gathering, and solution design. Saviynt IGA Administrators should be able to translate business needs into technical solutions.
Topic 8	<ul style="list-style-type: none"> ARS: This section of the exam measures the skills of Saviynt IGA Administrators and covers the Access Request System (ARS) in Saviynt. It includes understanding the ARS workflow, configuring access requests, and managing approvals. Candidates should be able to set up and customize the ARS for different organizational needs. The exam assesses the ability to implement effective access request processes.
Topic 9	<ul style="list-style-type: none"> Configure Common IGA Use-Cases: Saviynt IGA Administrators are expected to showcase their ability to configure common IGA use-cases in this final section. It covers scenarios such as joiner-mover-leaver processes, role-based access control, and privileged access management.
Topic 10	<ul style="list-style-type: none"> Rules & Policies: This section measures the skills of Saviynt Administrators in creating and managing rules and policies within the Saviynt IGA platform. It covers access policies, provisioning rules, and compliance policies.
Topic 11	<ul style="list-style-type: none"> Deploy & Manage: This section measures the skills of exam-takers in deploying and managing Saviynt IGA solutions. It covers installation procedures, upgrades, and ongoing maintenance tasks.

Saviynt - SAVIGA-C01 - Saviynt IGA Certified Professional Exam (L100) – Professional Exam Registration

As is known to us, a suitable learning plan is very important for all people. For the sake of more competitive, it is very necessary for you to make a learning plan. We believe that our SAVIGA-C01 actual exam will help you make a good learning plan. You can have a model test in limited time by our SAVIGA-C01 Study Materials, if you finish the model test, our system will generate a report according to your performance. And in this way, you can have the best pass percentage on your SAVIGA-C01 exam.

Saviynt IGA Certified Professional Exam (L100) Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which of the following Rules should always be used in conjunction with the Organization object?

- A. Scan Rule
- B. Technical Rule
- C. Request Rule
- D. User Update Rule

Answer: D

Explanation:

The type of Rule that should always be used in conjunction with the Organization object in Saviynt is the B.

User Update Rule. Here's the explanation:

* Saviynt's Organization Object: The Organization object in Saviynt represents the organizational structure or hierarchy (e.g., departments, locations, cost centers). It's often used to define relationships between users and organizational units.

* User Update Rule: This type of rule is designed to automatically update user attributes based on changes in other user attributes or related objects.

* Using Organization with User Update Rule: The User Update Rule is frequently used with the Organization object to automate user management based on organizational changes.

* Example: You can create a User Update Rule that automatically assigns users to specific roles or groups based on their department (defined in the Organization object). If a user is moved to a different department, the rule will trigger and update their roles or group memberships accordingly.

* Dynamic User Management: This combination enables dynamic user management, ensuring that user attributes and access rights are automatically adjusted as users move within the organization.

* Other Options:

* A. Technical Rule: Technical Rules are more general-purpose and can be used for various tasks, but they are not specifically tied to the Organization object.

* C. Scan Rule: Scan Rules are used for data analysis and identifying potential issues, not for updating user attributes based on organizational structure.

* D. Request Rule: Request Rules are related to access request workflows, not to automatic user updates.

In essence: The User Update Rule, when used in conjunction with the Organization object, provides a powerful way to automate user management in Saviynt, ensuring that user attributes and access rights are dynamically updated based on changes in the organizational structure.

NEW QUESTION # 41

Which of the following Role types should be selected for a Role containing Entitlements that span across multiple applications?

- A. Application Role
- B. Transactional Role
- **C. Enterprise Role**
- D. Enabler Role

Answer: C

Explanation:

In Saviynt, Enterprise Roles are specifically designed to encompass entitlements that span multiple applications. This is in contrast to Application Roles, which are limited to entitlements within a single application.

* Enterprise Roles: Provide a way to group entitlements across different applications, reflecting a user's overall job function or responsibilities within the organization. This is essential for managing access for users who need permissions in various systems to perform their duties.

* Other Role Types:

* Application Role: Grants permissions specific to a single application.

* Transactional Role: Focuses on granting permissions for specific tasks or transactions within an application.

* Enabler Role: Provides supplementary permissions that enhance or support other roles.

Saviynt IGA References:

* Saviynt Documentation: The section on Role Management within Saviynt's documentation clearly defines the different role types and their purposes.

* Saviynt Training Materials: Saviynt's training courses emphasize the importance of Enterprise Roles in managing cross-application access.

NEW QUESTION # 42

Which of the following configurations on Entitlement Type is used to make an Entitlement request time- bound?

- **A. Start Date/End Date while raising a Request**
- B. Config JSON for Request Dates
- C. Ask for Start Date while revoking
- D. Allow update of Access End Date

Answer: A

Explanation:

To make an Entitlement request time-bound in Saviynt, the configuration used on the Entitlement Type is D.

Start Date/End Date while raising a Request. Here's a breakdown:

- * Saviynt's Entitlement Management: Entitlements represent specific access rights within an application. Saviynt allows fine-grained control over how these entitlements are requested and granted.
- * Entitlement Type Configuration: Within Saviynt, each Entitlement Type can be configured with various settings that govern its behavior during access requests.
- * Time-Bound Access: To enforce time-limited access, Saviynt provides the option to require a Start Date and End Date during the request process.
- * "Start Date/End Date while raising a Request": This configuration setting, when enabled on an Entitlement Type, forces the requester to specify a desired start and end date for the access. This ensures that the granted access will only be valid for a specific period.
- * Saviynt's Workflow Engine and Provisioning: When a request with a start and end date is approved, Saviynt's workflow engine will typically handle the provisioning and de-provisioning based on these dates. If connected integration is set up, it may schedule the activation and deactivation of the access in the target system accordingly.
- * Other Options:
 - * A. Ask for Start Date while revoking: This setting is related to revoking access, not granting time-bound access.
 - * B. Allow update of Access End Date: This allows modification of the end date after the access has been granted, but it doesn't enforce a time-bound request from the outset.
 - * C. Config JSON for Request Dates: While JSON might be used internally for configuration, this is not the specific setting that directly enables time-bound access requests.

In summary: The "Start Date/End Date while raising a Request" configuration on an Entitlement Type in Saviynt is the key to enforcing time-bound access, ensuring that access is granted only for a specific, pre-defined period.

NEW QUESTION # 43

Which of the following connection types is best suited to expose Workday reports as a data service?

- **A. Workday-RAAS**
- B. Workday-REST
- C. Workday-OAuth
- D. Workday-SOAP

Answer: A

Explanation:

The connection type best suited to expose Workday reports as a data service in Saviynt is A. Workday- RAAS (Report as a Service). Here's why:

- * Workday-RAAS: This connection type is specifically designed to integrate with Workday's RaaS functionality. Workday RaaS allows you to expose custom reports created within Workday as web services that can be consumed by external applications like Saviynt.
- * Data Service for Reports: RaaS essentially turns a Workday report into a data service, making it easy to retrieve the report's data in a structured format (typically XML or JSON).
- * Saviynt's Integration: Saviynt's Workday-RAAS connection type is built to leverage this capability, allowing you to:
 - * Select Workday Reports: Choose the specific Workday reports you want to integrate with.
 - * Import Data: Import the data from those reports into Saviynt for various purposes (e.g., identity governance, access certification, analytics).
 - * Schedule Imports: Schedule regular data imports to keep Saviynt's data synchronized with Workday.
- * Why Other Options Are Less Suitable:
 - * B. Workday-REST: While Workday has a REST API, it's more general-purpose and not specifically tailored for exposing reports as data services in the same way as RaaS.
 - * C. Workday-OAuth: OAuth is an authorization protocol, not a connection type for retrieving report data.
 - * D. Workday-SOAP: Workday's SOAP API is being gradually replaced by the REST API and is less focused on report data retrieval than RaaS.

NEW QUESTION # 44

Which of the following must be linked to the Active Directory Security System to automatically reconcile Accounts from AD into Saviynt?

- A. AD Role
- B. AD Rule
- C. AD Control
- **D. AD Connection**

Answer: D

Explanation:

An AD Connection in Saviynt is required to establish communication and data exchange with an Active Directory (AD) domain. This connection enables Saviynt to automatically reconcile accounts from AD, ensuring that the identity information in Saviynt stays synchronized with the AD.

Why other options are incorrect:

AD Control, AD Rule, AD Role: These terms are not standard components within Saviynt's framework for integrating with Active Directory.

Saviynt IGA References:

Saviynt Documentation: The section on integrating with Active Directory clearly outlines the need for an AD Connection and provides step-by-step instructions for configuring it.

Saviynt Connectors: Saviynt offers pre-built connectors for Active Directory that simplify the process of establishing the connection.
