There may be a lot of people feel that the preparation process for Identity-and-Access-Management-Architect exams is hard and boring, and hard work does not necessarily mean good results, which is an important reason why many people are afraid of examinations. Today, our Identity-and-Access-Management-Architect Exam Materials will radically change this. High question hit rate makes you no longer aimless when preparing for the exam, so you just should review according to the content of our Identity-and-Access-Management-Architect study guide prepared for you.

To prepare for the Salesforce Identity-and-Access-Management-Architect Certification Exam, candidates must have a strong understanding of the core concepts and principles of identity and access management, as well as a deep understanding of Salesforce applications and technologies. To achieve this certification, candidates must pass a rigorous exam that tests their knowledge, skills, and expertise in these areas.

Salesforce Certified Identity and Access Management Architect Sample

Questions (Q19-Q24):

NEW QUESTION # 19

Universal Containers (UC) has an Experience Cloud site (Customer Community) where customers can authenticate and place orders, view the status of orders, etc. UC allows guest checkout.

How can a guest register using data previously collected during order placement?

- A. Enable Security Assertion Markup Language Sign-On and use a login flow to collect only order details to retrieve customer data.
- **B. Enable self-registration and customize a self-registration page to collect only order details to retrieve customer data.**
- C. Use a Connected App Handler Apex Plugin class to collect only order details to retrieve customer data.
- D. Enable Facebook as an authentication provider and use a registration handler to collect only order details to retrieve customer data.

Answer: B

NEW QUESTION # 20

Universal Containers (UC) has Active Directory (AD) as their enterprise identity store and would like to use it for Salesforce user authentication. UC expects to synchronize user data between Salesforce and AD and Assign the appropriate Profile and Permission Sets based on AD group membership. What would be the optimal way to implement SSO?

- A. Use Microsoft Access control Service as the Authentication provider.
- B. Use Active Directory Federation Service (ADFS) as the Identity Provider.
- **C. Use Salesforce Identity Connect as the Identity Provider.**
- D. Use Active Directory with Reverse Proxy as the Identity Provider.

Answer: C

Explanation:

Explanation

The optimal way to implement SSO with Active Directory as the enterprise identity store is to use Salesforce Identity Connect as the identity provider. Salesforce Identity Connect is a software that integrates Microsoft Active Directory with Salesforce and enables single sign-on (SSO) using SAML. It also allows user data synchronization between Active Directory and Salesforce and profile and permission set assignment based on Active Directory group membership. Option A is not a good choice because using Active Directory with reverse proxy as the identity provider may not be supported by Salesforce or may require additional configuration and customization. Option B is not a good choice because using Microsoft Access Control Service as the authentication provider may not be available, as Microsoft has retired this service in 2018.

Option C is not a good choice because using Active Directory Federation Service (ADFS) as the identity provider may not allow user data synchronization or profile and permission set assignment based on Active Directory group membership, unless it is combined with another tool such as Salesforce Identity Connect.

NEW QUESTION # 21

An identity architect has been asked to recommend a solution that allows administrators to configure personalized alert messages to users before they land on the Experience Cloud site (formerly known as Community) homepage.

What is recommended to fulfill this requirement with the least amount of customization?

- A. Create custom metadata that stores user alerts and use a LWC to display alerts.
- **B. Use Login Flows to add a screen that shows personalized alerts.**
- C. Customize the registration handler Apex class to create a routing logic navigating to different home pages based on the user profile.
- D. Build a Lightning web Component (LWC) for a homepage that shows custom alerts.

Answer: B

Explanation:

Explanation

Login Flows are custom post-authentication processes that can be used to add additional screens or logic after a user logs in to Salesforce. Login Flows can be used to show personalized alert messages to users based on their profile or other criteria before they

land on the Experience Cloud site homepage. Login Flows require minimal customization and can be configured using Visual Workflow or Apex. References: Login Flows, Customizing User Authentication with Login Flows

NEW QUESTION # 22

□ A pharmaceutical company has an on-premise application (see illustration) that it wants to integrate with Salesforce. The IT director wants to ensure that requests must include a certificate with a trusted certificate chain to access the company's on-premise application endpoint.

What should an Identity architect do to meet this requirement?

- A. Upload a third-party certificate from Salesforce into the on-premise server.
- B. Generate a certificate authority-signed certificate in Salesforce and uploading it to the on-premise application Truststore.
- C. Use open SSL to generate a Self-signed Certificate and upload it to the on-premise app.
- **D. Configure the company firewall to allow traffic from Salesforce IP ranges.**

Answer: D

NEW QUESTION # 23

An Identity and Access Management (IAM) Architect is recommending Identity Connect to integrate Microsoft Active Directory (AD) with Salesforce for user provisioning, deprovisioning and single sign-on (SSO).

Which feature of Identity Connect is applicable for this scenario?

- A. If the number of provisioned users exceeds Salesforce license allowances, identity Connect will start disabling the existing Salesforce users in First-in, First-out (FIFO) fashion.
- B. Identity Connect can be deployed as a managed package on salesforce org, leveraging High Availability of Salesforce Platform out-of-the-box.
- **C. When Identity Connect is in place, if a user is deprovisioned in an on-premise AD, the user's Salesforce session Is revoked Immediately.**
- D. When configured, Identity Connect acts as an identity provider to both Active Directory and Salesforce, thus providing SSO as a default feature.

Answer: C

Explanation:

Explanation

Identity Connect is a tool that synchronizes user data between Microsoft Active Directory and Salesforce. It allows user provisioning, deprovisioning, and single sign-on (SSO) between multiple Active Directory domains and a single Salesforce org. One of the features of Identity Connect is that it can revoke the user's Salesforce session immediately when the user is deprovisioned in an on-premise Active Directory. This can enhance security and compliance by preventing unauthorized access to Salesforce resources. References:
