Pass Guaranteed Efficient Microsoft - GH-500 Valid Exam Topics

You only need 20-30 hours to learn our GH-500 test torrents and prepare for the exam. Anybody, whether he or she is an in-service staff or a student, must spend much time on their jobs, family lives and the learning. After buying our GH-500 exam questions you only need to spare several hours to learn our GH-500 test torrent s and commit yourselves mainly to the jobs, the family lives and the learning. Our answers and questions of GH-500 Exam Questions are chosen elaborately and seize the focus of the exam so you can save much time to learn and prepare the exam. Because the passing rate is high you can reassure yourselves to buy our GH-500 guide torrent.

Microsoft GitHub Advanced Security Sample Questions (Q12-Q17):

NEW QUESTION # 12

As a repository owner, you want to receive specific notifications, including security alerts, for an individual repository. Which repository notification setting should you use?

- A. Ignore
- B. All Activity
- C. Participating and @mentions
- **D. Custom**

Answer: D

Explanation:

Using the Custom setting allows you to subscribe to specific event types, such as Dependabot alerts or vulnerability notifications, without being overwhelmed by all repository activity. This is essential for repository maintainers who need fine-grained control over what kinds of events trigger notifications.

This setting is configurable per repository and allows users to stay aware of critical issues while minimizing notification noise.

NEW QUESTION # 13

When using the advanced CodeQL code scanning setup, what is the name of the workflow file?

- A. codeql-workflow.yml
- **B. codeql-analysis.yml**
- C. codeql-scan.yml
- D. codeql-config.yml

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

In the advanced setup for CodeQL code scanning, GitHub generates a workflow file named codeql-analysis.yml. This file is located in the .github/workflows directory of your repository. It defines the configuration for the CodeQL analysis, including the languages to analyze, the events that trigger the analysis, and the steps to perform during the workflow.

NEW QUESTION # 14

Which details do you have to provide to create a custom pattern for secret scanning? (Each answer presents part of the solution. Choose two.)

- **A. The name of the pattern**
- **B. The secret format**
- C. A list of repositories to scan
- D. Additional match requirements for the secret format

Answer: A,B

Explanation:

When defining a custom pattern for secret scanning, two key fields are required:

Name of the pattern: A unique label to identify the pattern

Secret format: A regular expression that defines what the secret looks like (e.g., token format) You can optionally specify additional match requirements (like required context keywords), but they're not mandatory. Listing repositories is also not part of the required fields during pattern creation.

NEW QUESTION # 15

Which of the following workflow events would trigger a dependency review? (Each answer presents a complete solution. Choose two.)

- **A. workflow_dispatch**
- B. commit
- **C. pull_request**
- D. trigger

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation:

Dependency review is triggered by specific events in GitHub workflows:

pull_request: When a pull request is opened, synchronized, or reopened, GitHub can analyze the changes in dependencies and provide a dependency review.

workflow_dispatch: This manual trigger allows users to initiate workflows, including those that perform dependency reviews. The trigger and commit options are not recognized GitHub Actions events and would not initiate a dependency review.

NEW QUESTION # 16

Which of the following options would close a Dependabot alert?

- A. Viewing the dependency graph
- B. Leaving the repository in its current state
- **C. Creating a pull request to resolve the vulnerability that will be approved and merged**
- D. Viewing the Dependabot alert on the Dependabot alerts tab of your repository

Answer: C

Explanation:

A Dependabot alert is only marked as resolved when the related vulnerability is no longer present in your code - specifically after you merge a pull request that updates the vulnerable dependency.

Simply viewing alerts or graphs does not affect their status. Ignoring the alert by leaving the repo unchanged keeps the vulnerability active and unresolved.

NEW QUESTION # 17

.....

Success in the Microsoft GH-500 exam is impossible without proper GH-500 exam preparation. I would recommend you select Exam4PDF for your GH-500 certification test preparation. Exam4PDF offers updated Microsoft GH-500 PDF Questions and practice tests. This GH-500 practice test material is a great help to you to prepare better for the final Microsoft GH-500 exam. Exam4PDF latests GH-500 exam dumps are one of the most effective Microsoft GH-500 Exam Preparation methods. These valid Microsoft GH-500 exam dumps help you achieve better GH-500 exam results. World's highly qualified professionals provide their best knowledge to Exam4PDF and create this Microsoft GH-500 practice test material. Candidates can save time because GH-500 valid dumps help them to prepare better for the Microsoft GH-500 test in a short time.
