

300-620 Valid Exam Simulator, Exam 300-620 Collection

BTW, DOWNLOAD part of ValidVCE 300-620 dumps from Cloud Storage: <https://drive.google.com/open?id=1KIwiw9yPchvX3bROIY8Zt9CoEUw7Zez2>

To get all these benefits you must have to pass the Implementing Cisco Application Centric Infrastructure (300-620) certification exam which is not an easy task. It is a difficult task but you can make ValidVCE simple and quick. To do this you just visit Exams. Solutions provide updated, valid, and actual 300-620 Exam Dumps that will assist you in Implementing Cisco Application Centric Infrastructure (300-620) exam preparation and you can easily get success in this challenging Implementing Cisco Application Centric Infrastructure exam with flying colors.

Cisco 300-620 certification exam covers a range of topics related to the implementation of Cisco ACI technology. These topics include ACI architecture, fabric discovery, policy model, tenant configuration, application profiles, endpoint groups, and service graphs. 300-620 Exam also covers topics related to network automation, orchestration, and troubleshooting.

Quiz Cisco - 300-620 - Implementing Cisco Application Centric Infrastructure –The Best Valid Exam Simulator

From the ValidVCE platform, you will get the perfect match 300-620 actual test for study. 300-620 practice download pdf are researched and produced by Professional Certification Experts who are constantly using industry experience to produce precise, and logical 300-620 Training Material. 300-620 study material is constantly beginning revised and updated for relevance and accuracy. You will pass your real test with our accurate 300-620 practice questions and answers.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q271-Q276):

NEW QUESTION # 271

What happens to the traffic flow when the Cisco ACI fabric has a stale endpoint entry for the destination endpoint?

- A. The leaf switch sends the traffic to the wrong destination leaf.

- B. The leaf switch does not learn the source endpoint through data plane learning.
- **C. The leaf switch floods the traffic to the endpoint throughout the fabric.**
- D. The leaf switch drops the traffic that is destined to the endpoint.

Answer: C

Explanation:

When the Cisco ACI fabric has a stale endpoint entry for the destination endpoint, the traffic flow is affected in that the leaf switch floods the traffic to the endpoint throughout the fabric (Option C). This flooding occurs because the leaf switch does not have the correct location of the endpoint in its endpoint table, leading it to flood the traffic in an attempt to reach the destination.

NEW QUESTION # 272

Refer to the exhibit.

Which two objects are created as a result of the configuration? (Choose two.)

- **A. VRF**
- B. endpoint group
- **C. bridge domain**
- D. attachable AEP
- E. application profile

Answer: A,C

Explanation:

Reference:

https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/2-x/rest_cfg/2_1_x/b_Cisco_APIC_REST_API_Configuration_Guide/b_Cisco_APIC_REST_API_Configuration_Guide_chapter_01110.html

NEW QUESTION # 273

A customer implements RBAC on a Cisco APIC using a Windows RADIUS server that is configured with network control policies. The APIC is as follows:

Tenant = TenantX

Security Domain = TenantX-SD

User = X

The customer requires User X to have access to TenantX only, without any extra privilege in the Cisco ACI fabric domain. Which Cisco AV pair must be implemented on the RADIUS server to meet these requirement?

- A. shell:domains = TenantX-SD/tenant-ext-admin/common/read-all
- B. shell:domains = TenantX-SD/tenant-admin/common/read-all
- **C. shell:domains = TenantX-SD/tenant-admin**
- D. shell:domains = TenantX-SD/fabric-admin/common/read-all

Answer: C

Explanation:

To restrict User X to have access only to TenantX without any extra privileges in the Cisco ACI fabric domain, the Cisco AV pair

that must be implemented on the RADIUS server is shell:domains = TenantX-SD/tenant-admin. This AV pair assigns User X the role of tenant admin within the security domain of TenantX, ensuring that the user has the necessary permissions to manage resources within TenantX and no additional privileges outside of this scope.

[x/Security_config/b_Cisco_APIC_Security_Guide/b_Cisco_APIC_Security_Guide_chapter_0100.html](https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/2-x/Security_config/b_Cisco_APIC_Security_Guide/b_Cisco_APIC_Security_Guide_chapter_0100.html)

Configuring an AV Pair on the External Authentication Server

The numerical value within the parentheses in the attribute/value (AV) pair string is used as the UNIX user ID of the user who is logged in using Secure Shell (SSH) or Telnet.

Procedure

Configure an AV pair on the external authentication server. The Cisco AV pair definition is as follows (Cisco supports AV pa

Example:

```
* shell:domains = domainA/writeRole1|writeRole2|writeRole3/readRole1|readRole2,domainB/writeRole1|writeRole2|wri
* shell:domains = domainA/writeRole1|writeRole2|writeRole3/readRole1|readRole2,domainB/writeRole1|write
```

These are the boost regexes supported by APIC:

```
uid_regex("shell:domains\\s*[:]\\s*((\\s+?/\\s+?/\\s+?)(,\\s+?/\\s+?/\\s+?){0,31})(\\(\\d+\\))$");
regex("shell:domains\\s*[:]\\s*((\\s+?/\\s+?/\\s+?)(,\\s+?/\\s+?/\\s+?){0,31})$");
```

The following is an example:

```
shell:domains = coke/tenant-admin/read-all,pepsi//read-all(16001)
```

NEW QUESTION # 274

An engineer is configuring a VRF for a tenant named Cisco. Drag and drop the child objects on the left onto the correct containers on the right for this configuration.

Answer:

Explanation:

NEW QUESTION # 275

A company is implementing a new security policy to track system access, configuration, and changes. The network engineer must enable the log collection to track user login and logout attempts. In addition, any configuration changes such as a fabric node failure must be collected in the logs. The syslog policy is configured to send logs to the company SEIM appliance.

Which two log types must be enabled to meet the security requirements? (Choose two.)

- A. health
- B. error
- C. fault
- D. audit
- E. event

Answer: C,D

Explanation:

To meet the security requirements of tracking user login/logout attempts and configuration changes (including fabric node failures), the following log types must be enabled:

- Audit Logs

Audit logs track user authentication events, such as login and logout attempts.

They also log configuration changes made by users, including modifications to security policies, system settings, and permissions.

This log type is essential for compliance and security monitoring.

- Fault Logs

Fault logs capture hardware or software issues, including fabric node failures and critical system faults.

These logs provide detailed insights into system health and failures, making them crucial for security monitoring.

NEW QUESTION # 276

.....

The earlier you get 300-620 exam certification, the more helpful for you to have better development in IT industry. Maybe you have heard that the important 300-620 exam will take more time or training fee, because you haven't use our 300-620 exam software provided by our ValidVCE. The complex collection and analysis of 300-620 Exam Materials have been finished by our professional team for you. You just need to effectively review and pass 300-620 exam successfully.
