Benühen Sie sich noch um die HP HPE7-A02 Zertifizierungsprüfung? Wollen Sie schneller Ihren Traum verwirklichen? Bitte wählen Sie die HPE7-A02 Schulungsmaterialien von ExamFragen. Wenn Sie ExamFragen wählen, ist es kein Traum mehr, das HP HPE7-A02 Zertifikat zu erhalten.

HP HPE7-A02 Exam Syllabus Topics:

Section	Objectives
Topic 1: Identity and Access Management	- 802.1X authentication workflows - AAA concepts (Authentication, Authorization, Accounting)
Topic 2: Network Security Fundamentals	
Topic 3: Aruba Security Architecture	- Aruba ClearPass ecosystem overview - Policy enforcement and access control concepts
Topic 4: Monitoring and Troubleshooting	- Security event monitoring - Network security diagnostics
Topic 5: Network Access Control	- Guest and device onboarding - Role-based access policies
Topic 6: Secure Connectivity	- Secure remote access design - VPN concepts and secure tunneling

>> HPE7-A02 Testantworten <<

Die seit kurzem aktuellsten Aruba Certified Network Security Professional Exam Prüfungsunterlagen, 100% Garantie für Ihen Erfolg in der HP HPE7-

A02 Prüfungen!

Durch die kontinuierliche Entwicklung und das Wachstum der IT-Branche in den letzten Jahren ist HPE7-A02 Prüfung schon zu einem Meilenstein in der HP-Prüfung geworden. HPE7-A02 Prüfung kann Ihnen helfen, ein IT-Profi zu werden. Es gibt Hunderte von Online-Ressourcen, die HP HPE7-A02 Zertifizierungsprüfung bieten. Der Grund, warum die meisten Menschen ExamFragen wählen, liegt darin, dass ExamFragen ein riesiges IT-Elite Team hat. Um Ihnen Zugänglichkeit zur HP HPE7-A02 Zertifizierungsprüfung zu gewährleisten, spezialisieren sich unser Eliteteam auf die neuesten Materialien der HP HPE7-A02 Prüfung. ExamFragen verspricht, dass Sie zum ersten Mal die Zertifizierung von HP erhalten HP HPE7-A02 Prüfung können. ExamFragen steht immer mit Ihnen durch dick und dünn.

HP Aruba Certified Network Security Professional Exam HPE7-A02 Prüfungsfragen mit Lösungen (Q118-Q123):

118. Frage

A company has AOS-CX switches and is implementing authentication to HPE Aruba Networking ClearPass Policy Manager (CPPM). The company wants to monitor each switch's connectivity to CPPM. If connectivity is lost, the switch should trigger an alert and collect some information with CLI commands. What can you do to support this use case?

- A. Configure the switches to implement RADIUS accounting to CPPM and enable ClearPass Insight.
- B. Discover the switches within HPE Aruba Networking Central and set up Aruba Central connectivity alerts in the switch group.
- C. Enable Control Plane Policing on the switches on the VRF on which they connect to CPPM.
- **D. Use the switches' NAE functions to monitor connectivity to CPPM.**

Antwort: D

Begründung:

AOS-CX Network Analytics Engine is designed for local monitoring, alerting, and automated diagnostics. An NAE agent can monitor connectivity to a critical service such as ClearPass Policy Manager. If the switch loses connectivity to CPPM, the NAE agent can trigger an alert and run CLI commands to collect relevant troubleshooting information at the time of failure. CoPP protects the switch control plane but does not monitor CPPM reachability or collect diagnostics. RADIUS accounting and ClearPass Insight help with session reporting, not switch-side failure detection.

Aruba Central alerts are useful for cloud visibility, but they do not provide the same local diagnostic automation. NAE is the correct tool for this monitoring workflow.

119. Frage

A company has AOS-CX switches managed by HPE Aruba Networking Central. The network infrastructure devices authenticate clients to HPE Aruba Networking ClearPass Policy Manager (CPPM), which is integrated with HPE Aruba Networking ClearPass Device Insight (CPDI). You have seen suspicious activity on a client connected to one of the switches. To investigate the client's activity further, you need to know all of the IP addresses that it has used in the past two weeks. Where can you find this information collected together?

- **A. In CPDI's History tab for the client**
- B. In the logs stored on the client's switch
- C. In HPE Aruba Networking Central's Audit Trail for the client's switch
- D. In CPPM's Device Profiler dashboard

Antwort: A

Begründung:

ClearPass Device Insight is the correct source for endpoint history and behavioral investigation. CPDI collects device identity, profiling, address, and activity information over time. The History tab for a client is designed to show historical information about that endpoint, including IP addresses used during previous observations.

CPPM's Device Profiler dashboard focuses mainly on classification and endpoint attributes, not a consolidated two-week IP history. Aruba Central's Audit Trail records administrative and infrastructure changes, not full endpoint address history. Local switch logs might contain fragments of information, but they are not a centralized endpoint-investigation view. For suspicious client investigation and historical IP-address tracking, CPDI's History tab is the correct location.

120. Frage

A company has AOS-CX switches and HPE Aruba Networking ClearPass Policy Manager (CPPM). The company wants switches to implement 802.1X authentication to CPPM and download user roles. What is one task that you must complete on CPPM to support this use case?

- A. Create an admin account for the switch on CPPM with the HPE Aruba Networking User Role Download privilege level.
- **B. Configure RADIUS enforcement profiles that specify the HPE-User-Role VSA.**
- C. Export roles on CPPM to a file that uses XML format.
- D. Upload the switch TPM certificate as a trusted CA certificate with the Others usage.

Antwort: B

Begründung:

* 802.1X and User Role Download:

* AOS-CX switches use RADIUS attributes to dynamically download user roles from CPPM.

* The HPE-User-Role VSA (Vendor-Specific Attribute) must be configured in the RADIUS enforcement profiles to specify which role the switch should apply.

* Option Analysis:

* Option A: Incorrect. Exporting roles in XML is not needed for dynamic role download.

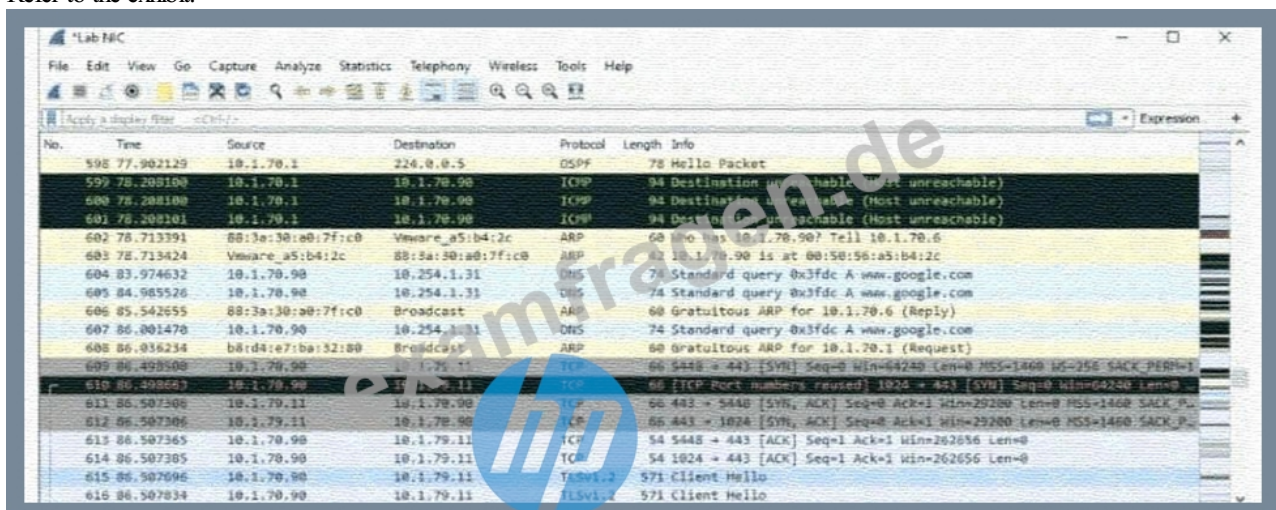

* Option B: Incorrect. Switches authenticate via RADIUS, not admin accounts with specific privileges.

* Option C: Correct. RADIUS enforcement profiles must include the HPE-User-Role VSA to implement user role download.

* Option D: Incorrect. TPM certificates are unrelated to RADIUS-based user role downloads.

121. Frage

Refer to the exhibit.

The exhibit shows a saved packet capture, which you have opened in Wireshark. You want to focus on the complete conversation between 10.1.70.90 and 10.1.79.11 that uses source port 5448.

What is a simple way to do this in Wireshark?

- A. Click the Source column and then the Destination column to sort the packets into the desired order.
- B. Apply a capture filter that selects for both the 10.1.70.90 and 10.1.79.11 IP addresses.
- C. Apply a capture filter that selects for TCP port 5448.
- **D. Right-click one of the packets between those addresses and choose to follow the stream.**

Antwort: D

Begründung:

* Wireshark: Follow TCP Stream:

* Wireshark provides an intuitive feature to filter and display a complete TCP conversation.

* By right-clicking any packet within the conversation and selecting "Follow # TCP Stream", Wireshark isolates and displays the entire conversation.

* This feature allows you to view the communication in a simplified, sequential manner, including requests and responses.

* Option Analysis:

* Option A: Incorrect. Capture filters only apply during packet capturing, not for analyzing already saved packet captures.

- * Option B: Incorrect. Sorting packets helps with organizing data but does not isolate a complete conversation.
 - * Option C: Incorrect. A capture filter for TCP port 5448 would have to be applied before capturing; it does not work for saved data.
 - * Option D: Correct. Right-clicking a packet and choosing "Follow TCP Stream" is the simplest way to display the full conversation between 10.1.70.90 and 10.1.79.11 on port 5448.
- Steps in Wireshark to Follow a TCP Stream:
- * Locate any packet within the desired conversation (e.g., between 10.1.70.90 and 10.1.79.11 on TCP port 5448).
 - * Right-click on the packet.
 - * Choose "Follow" # "TCP Stream".
 - * Wireshark will display the entire TCP conversation, including both directions of communication.
- This feature is especially useful when troubleshooting or analyzing detailed interactions between hosts.

122. Frage

A ClearPass Policy Manager (CPPM) service includes these settings:

Role Mapping Policy:

Evaluate: Select first

Rule 1 conditions:

Authorization:AD:Groups EQUALS Managers

Authentication:TEAP-Method-1-Status EQUALS Success

Rule 1 role: manager

Rule 2 conditions:

Authentication:TEAP-Method-1-Status EQUALS Success

Rule 2 role: domain-comp

Default role: [Other]

Enforcement Policy:

Evaluate: Select first

Rule 1 conditions:

Tips Role EQUALS manager AND Tips Role EQUALS domain-comp Rule 1 profile list: domain- manager Rule 2 conditions:

Tips Role EQUALS manager

Rule 2 profile list: manager-only

Rule 3 conditions:

Tips Role EQUALS domain-comp

Rule 3 profile list: domain-only

Default profile: [Deny access]

A client is authenticated by the service. CPPM collects attributes indicating that the user is in the Contractors group, and the client passed both TEAP methods.

Which enforcement policy will be applied?

- A. [Deny Access Profile]
- B. domain-manager
- C. manager-only
- D. domain-only

Antwort: A

123. Frage

.....

Machen Sie sich noch Sorgen um die HP HPE7-A02 (Aruba Certified Network Security Professional Exam) Zertifizierungsprüfung? Haben Sie schon mal gedacht, sich an einem entsprechenden Kurs teilzunehmen? Gute Prüfungsmaterialien zu wählen, wird Ihnen helfen, Ihre Fachkenntnisse zu konsolidieren und sich gut auf die HP HPE7-A02 Zertifizierungsprüfung vorbereiten. Das Expertenteam von ExamFragen hat endlich die neuesten zielgerichteten Schulungsunterlagen, die Ihnen beim Vorbereiten der Prüfung helfen, nach ihren Erfahrungen und Kenntnissen erforscht. Die HP HPE7-A02 Schulungsunterlagen von ExamFragen ist Ihre optimale Wahl.
