DOWNLOAD the newest VCETorrent AD0-E725 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1hypNcUrT6L39qVTCaJ3pk-n9KM6SZwTG>

Our AD0-E725 free demo provides you with the free renewal in one year so that you can keep track of the latest points happening. As the questions of exams of our AD0-E725 exam dumps are more or less involved with heated issues and customers who prepare for the exams must haven't enough time to keep trace of exams all day long, our AD0-E725 Practice Engine can serve as a conducive tool for you make up for those hot points you have ignored. You will be completed ready for your AD0-E725 exam.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.
Topic 2	<ul style="list-style-type: none">External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe IO events and webhooks to create automated and connected business processes.
Topic 3	<ul style="list-style-type: none">Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.
Topic 4	<ul style="list-style-type: none">Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.

For candidates who prefer a more flexible and convenient option, Adobe provides the AD0-E725 PDF file, which can be easily printed and studied at any time. The PDF file contains the latest real Adobe Commerce Developer Expert (AD0-E725) questions, and AD0-E725 ensures that the file is regularly updated to keep up with any changes in the exam's content.

Adobe Commerce Developer Expert Sample Questions (Q19-Q24):

NEW QUESTION # 19

A Developer is notified that custom API results are not cached, which is causing additional delays. What are two potential causes for this behavior? (Choose two.)

- A. The request is using HTTP PUT.
- B. The request is using HTTP GET.
- C. The request is using HTTP HEAD.
- D. The request is using HTTP POST.

Answer: A,D

Explanation:

Adobe Commerce API caching (including GraphQL and REST) works only for idempotent requests such as HTTP GET. C (POST) and D (PUT) are not cacheable because they are used for creating or updating resources.

A (GET) is cacheable.

B (HEAD) is technically idempotent, but not commonly used in Adobe Commerce APIs.

Reference:

Adobe Commerce DevDocs - Web API caching
HTTP/1.1 RFC 7231 - Cacheable methods

NEW QUESTION # 20

A customer wants to create a set of CMS blocks to be used on their website but does not wish to create these manually. An Adobe Commerce Developer is tasked to install the CMS blocks programmatically. How should the Developer achieve this?

- A. Implement the `DataPatchInterface`, then use the block repository in the `apply()` function to create the blocks.
- B. Implement the `InstallSchemaInterface`, then use the block repository in the `execute()` function to create the blocks.
- C. Implement the `SchemaSetupInterface`, then use the block repository in the `apply()` function to create the blocks.

Answer: A

NEW QUESTION # 21

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Ensure that all user input is sanitized before being processed by the application.
- B. Prevent users from accessing certain areas of the website based on their IP address.
- C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Answer: C

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Adobe Commerce supports Content Security Policy (CSP), a browser-level security feature that mitigates certain types of attacks such as Cross-Site Scripting (XSS) and data injection attacks.

By defining a CSP in Adobe Commerce, developers can control:

- * Which scripts can be executed (script-src).
- * Which stylesheets can be applied (style-src).
- * Which images and media can be loaded (img-src, media-src).
- * Whether inline scripts or styles are allowed.

This does not sanitize user input (A) nor restrict user access based on IP addresses (B). Instead, it focuses on restricting the sources of content that the browser can load.

Official Documentation Extracts:

* "Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. CSP works by restricting the sources from which content can be loaded."- Adobe Commerce DevDocs: Content Security Policy

* "A CSP allows developers to define approved sources of content that browsers can load. These policies help reduce the risk of malicious content injection in Magento storefronts."- Adobe Commerce Security Guide

NEW QUESTION # 22

A Developer is writing an integration test. The functionality being tested has many admin area configurations that need to be tested. Which DocBlock annotation should be used to allow configuration settings to be manipulated for testing purposes?

- A. `@testAdminConfFixture`
- **B. `@testConfigFixture`**
- C. `@testAdminArea`

Answer: B

Explanation:

The correct annotation is `@testConfigFixture`. It allows developers to set or override configuration values during tests.

A does not exist.

B does not exist.

C is correct: `@testConfigFixture` provides a way to programmatically adjust admin configurations for the scope of the test.

Adobe Commerce DevDocs - Integration test annotations

NEW QUESTION # 23

While implementing additional functionality, a Developer needs to modify a class with protected and private methods requiring custom logic. The Developer finds that no other Magento customization, such as plugins, will work.

What should the Developer do in this scenario?

- A. Use an observer to customize data processed by the class.
- **B. Use a preference and extend the original class.**
- C. Use a patch to implement the necessary customizations.

Answer: B

Explanation:

If methods are protected or private, plugins cannot be used because they only work with public methods. In this case, the developer should use a class preference to replace the original class with a custom class that extends it.

A (preference) is correct.

B (observer) cannot be used because observers only react to events, not protected/private methods.

C (patch) is not a customization mechanism; data/patches are used for database schema or data updates.
