## Huawei HCSA-Presales-IP Network V4.0 Sample Questions (Q83-Q88):

### NEW QUESTION # 83

Which of the following functions are not available in the SCT?

- A. Configure the components of products
- B. View products
- C. Compare similar products
- **D. Order the products directly**

**Answer: D**

Explanation:

The Solution Configuration Tool (SCT) supports:

Viewing products (A)

Comparing products (C)

Configuring product components (D)

However, B. Ordering the products directly is not available in SCT. SCT is a configuration and solution design tool, not a purchasing platform. Orders must be placed through authorized Huawei sales channels or partner platforms.

### NEW QUESTION # 84

Which of the following technologies provides high-quality network assurance for VIP users and key services?

- A. SSL
- **B. QoS**
- C. IPsec VPN
- D. SSH

**Answer: B**

Explanation:

QoS (Quality of Service) is the technology used to prioritize and guarantee bandwidth and latency performance for VIP users and mission-critical applications. It enables:

Traffic classification and prioritization

Bandwidth guarantees and rate limiting

Low latency paths for real-time services

A: IPsec VPN- Provides secure tunneling, not traffic prioritization

B: SSH and C. SSL- Offer encryption for secure access, but not performance assurance

### NEW QUESTION # 85

In Huawei's data center network solution, which technology is used to implement unified display of physical and logical networks for heterogeneous DCs and multi-vendor co-maintenance based on cross-DC heterogeneous interconnection?

- **A. AI-powered topology restoration technology of the network digital map**
- B. Lossless
- C. Telemetry
- D. Lossless

**Answer: A**

Explanation:

Huawei CloudFabric introduces a Network Digital Map (NDM) with AI-powered topology restoration capabilities.

This technology can:

Reconstruct full physical and logical topologies across multi-vendor and multi-cloud data centers.

Provide real-time visibility and mapping for O&M.

Simplify cross-DC operation and troubleshooting using AI and telemetry data.

Option A and B ("Lossless") appear to be repeated distractors and irrelevant in this context.

Telemetry supports the technology but is not the direct implementation of topology visualization.

#### NEW QUESTION # 86

In the past, network quality evaluation mainly focused on KPIs such as data transmission bandwidth, delay, and jitter. Now, network quality evaluation shifts its focus to service experience assurance. Which of the following are included in this regard? (Select all that apply)

- A. VIP user experience assurance
- B. Terminal experience assurance
- C. Wireless network experience assurance
- D. Audio and video application experience assurance

**Answer: A,B,C,D**

Explanation:

Huawei's iMaster NCE and digital intelligent O&M strategy focus on transforming traditional KPI-based monitoring into user- and application-centered assurance models.

A: VIP user experience: Priority monitoring and alerting for key users.

B: Terminal experience: Insights into access quality, authentication failures, and connection drops.

C: Wireless experience: Coverage maps, roaming statistics, interference detection.

D: Application experience: Ensures performance for latency-sensitive apps like voice/video through QoS and deep packet inspection.

#### NEW QUESTION # 87

The campus WAN interconnection solution is a sub-solution provided in the CloudCampus Solution for the interconnection between branch campuses and between branches and the HQ or DCs. With 5D- WANfunctions integrated, the solution provides two WAN interconnection models: static IPsec VPN and SD- WAN interconnection.

- A. False
- B. True

**Answer: B**

Explanation:

Huawei's CloudCampus Solution includes a campus WAN interconnection component that supports communication between branches and with the headquarters or data centers.

The WAN interconnection model supports two main deployment options:

Static IPsec VPN (a traditional method using manually configured tunnels), and SD-WAN interconnection (intelligent link selection, centralized control).

Huawei also provides "5D-WAN" capabilities - a suite of innovations that include application-based traffic steering, centralized management, dynamic link selection, and flexible deployment models.
