Sample Questions (Q50-Q55):

NEW QUESTION # 50

What is the standard use of a Use Case?

- A. You want to familiarize the project team with overall business processes.
- **B. You want targeted assistance for specific areas of the host application.**
- C. You want clear, step-by-step instructions for essential tasks.

Answer: B

Explanation:

A Use Case in OGL provides targeted assistance for specific areas of the host application, addressing unique scenarios or challenges. Familiarizing teams with processes (option A) aligns with Business Process Training, and step-by-step instructions (option C) are for Base Guides.

NEW QUESTION # 51

Which deployment approach can be used on all implementation projects that have OGL?

- A. Reflexive Adaptation
- B. Project Planning Process
- C. Adaptive Project Methodology
- **D. OGL Deployment Approach**

Answer: D

Explanation:

The OGL Deployment Approach (option C) is the standardized methodology designed for all implementation projects involving OGL, ensuring consistency and alignment with Oracle's tools and goals. Reflexive Adaptation (option A) and Adaptive Project Methodology (option B) are not OGL-specific terms, while Project Planning Process (option D) is generic and lacks OGL focus. The OGL Deployment Approach integrates phases like Focus, Enable, and Refine, making it universally applicable and tailored to OGL's unique requirements across projects.

NEW QUESTION # 52

Which "fake" users are required to test OGL content?

- A. Application trainers, change managers, and host application end users
- B. Several OGL content developers, system administrators, and tech leads
- **C. At least one member of the baseline team, a transaction initiator, and an approver**

Answer: C

Explanation:

Testing OGL content requires "dummy" users representing key roles: a baseline team member, a transaction initiator, and an approver. These roles simulate real-world workflows. Options A and C include non-essential or real-user roles not specific to testing requirements.

NEW QUESTION # 53

Which activities are part of content documentation and sign-off?

- A. Individual files in PDF format, rules communicated by email, and team members added as needed
- **B. Key resources identified, documentation established, and important deadlines planned**
- C. OGL content deployed in production, customized content published, and priorities established

Answer: B

Explanation:

Content documentation and sign-off involve identifying key resources, establishing documentation, and planning deadlines (option B)

to ensure a structured approval process. Option A is disorganized, and option C describes deployment, not documentation. Option B aligns with a systematic approach to finalizing content readiness.

NEW QUESTION # 54

Which OGL analytics dashboard provides data on how many of each type of guide is available in the OGL console?

- A. Feedback dashboard
- B. Users dashboard
- **C. Content dashboard**
- D. Activity dashboard

Answer: C

Explanation:

The Content dashboard in OGL provides a detailed breakdown of the content inventory within the console, including the quantity of each guide type (e.g., Base Guides, Process Guides, Smart Tips). This dashboard is essential for content management, offering visibility into the total number and categories of guides available, whether in Draft, Published, or Archived status. The Users dashboard (option A) focuses on user activity and login metrics, the Activity dashboard (option B) tracks guide usage and engagement over time, and the Feedback dashboard (option D) analyzes user ratings and comments. Only the Content dashboard directly addresses the question of "how many" by type, making it indispensable for content audits and planning, ensuring teams know the scope of their resources.
