## Test Your Skills with Amazon AWS-Certified-Developer-Associate Web-Based Practice Exam Software

Our company will provide first class service on AWS-Certified-Developer-Associate exam questions for our customers. As a worldwide leader in offering the best AWS-Certified-Developer-Associate exam guide, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in AWS-Certified-Developer-Associate Study Materials application as well as interactive sharing and after-sales service. As long as you need help, we will offer instant support to deal with any of your problems about our AWS-Certified-Developer-Associate exam questions.

The AWS Certified Developer - Associate certification is intended for developers who have one or more years of experience in developing and maintaining applications on the AWS platform. AWS-Certified-Developer-Associate Exam covers a wide range of

topics, including AWS core services such as EC2, S3, and RDS, as well as AWS developer tools such as AWS CodeDeploy, AWS CloudFormation, and AWS Elastic Beanstalk. Candidates are also tested on their knowledge of application security, application deployment, and troubleshooting.

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q172-Q177):

### NEW QUESTION # 172

A company is using an Amazon API Gateway REST API endpoint as a webhook to publish events from an on-premises source control management (SCM) system to Amazon EventBridge. The company has configured an EventBridge rule to listen for the events and to control application deployment in a central AWS account. The company needs to receive the same events across multiple receiver AWS accounts.

How can a developer meet these requirements without changing the configuration of the SCM system?

- A. Deploy the API Gateway REST API to all the receiver AWS accounts. Create as many SCM webhooks as the number of AWS accounts.
- **B. Grant permission to the central AWS account for EventBridge to access the receiver AWS accounts. Add an EventBridge event bus on the receiver AWS accounts as the targets to the existing EventBridge rule.**
- C. Convert the API Gateway type from REST API to HTTP API.
- D. Deploy the API Gateway REST API to all the required AWS accounts. Use the same custom domain name for all the gateway endpoints so that a single SCM webhook can be used for all events from all accounts.

**Answer: B**

### NEW QUESTION # 173

A Developer is using AWS CLI, but when running list commands on a large number of resources, it is timing out. What can be done to avoid this time-out?

- A. Use shorthand syntax
- B. Use parameter values
- C. Use quoting strings
- **D. Use pagination**

**Answer: D**

Explanation:

Reference: <https://docs.aws.amazon.com/cli/latest/userguide/cli-usage-pagination.html>

### NEW QUESTION # 174

Which Amazon service is not used by Elastic Beanstalk?

- A. Amazon S3
- **B. Amazon EMR**
- C. Amazon ELB
- D. Auto scaling

**Answer: B**

Explanation:

Elastic Beanstalk leverages AWS services such as Amazon Elastic Cloud Compute (Amazon EC2), Amazon Simple Storage Service (Amazon S3), Amazon Simple Notification Service (Amazon SNS), Elastic Load Balancing and Auto Scaling to deliver the same highly reliable, scalable, and cost-effective infrastructure that hundreds of thousands of businesses depend on today.

### NEW QUESTION # 175

You are designing a photo sharing mobile app the application will store all pictures in a single Amazon S3 bucket. Users will upload pictures from their mobile device directly to Amazon S3 and will be able to view and download their own pictures directly from

Amazon S3. You want to configure security to handle potentially millions of users in the most secure manner possible. What should your server-side application do when a new user registers on the photo-sharing mobile application?

- A. Record the user's Information in Amazon DynamoDB. When the user uses their mobile app create temporary credentials using AWS Security Token Service with appropriate permissions. Store these credentials in the mobile app's memory and use them to access Amazon S3 Generate new credentials the next time the user runs the mobile app.
- B. Create an IAM user. Update the bucket policy with appropriate permissions for the IAM user Generate an access Key and secret Key for the IAM user, store them In the mobile app and use these credentials to access Amazon S3
- C. Create IAM user. Assign appropriate permissions to the IAM user Generate an access key and secret key for the IAM user, store them in the mobile app and use these credentials to access Amazon S3.
- **D. Record the user's Information in Amazon RDS and create a role in IAM with appropriate permissions. When the user uses their mobile app create temporary credentials using the AWS Security Token Service 'AssumeRole' function. Store these credentials in the mobile app's memory and use them to access Amazon S3. Generate new credentials the next time the user runs the mobile app.**
- E. Create a set of long-term credentials using AWS Security Token Service with appropriate permissions Store these credentials in the mobile app and use them to access Amazon S3.

**Answer: D**

**NEW QUESTION # 176**

A Developer is working on an application that tracks hundreds of millions of product reviews in an Amazon DynamoDB table. The records include the data elements shown in the table:

Name	Type	Description
reviewID	Number	16 digit UUID
starRating	Number	Integer 1-5 of user rating
comment	String	User comment string
productID	Number	Product ID being reviewed

Which field, when used as the partition key, would result in the MOST consistent performance using DynamoDB?

- A. comment
- **B. reviewID**
- C. productID
- D. starRating

**Answer: B**
