Valid Network-Security-Essentials Exam Pdf - Network-Security-Essentials Latest Exam Question

Comfortable life will demoralize and paralyze you one day. So you must involve yourself in meaningful experience to motivate yourself. For example, our Network-Security-Essentials study materials perhaps can become your new attempt. In fact, learning our Network-Security-Essentials learning quiz is a good way to inspire your spirits. Not only that you can pass the exam and gain the

according Network-Security-Essentials certification but also you can learn a lot of knowledge and skills on the subject.

WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q38-Q43):

NEW QUESTION # 38

If the Firebox does not have a feature key installed, which of these statements are true? (Select three.)

- A. You cannot upgrade the Firebox
- B. You cannot run the Web Setup Wizard
- C. You cannot save configuration changes to the Firebox
- D. Only one user can connect to the Internet through the Firebox
- E. You cannot configure subscription services

Answer: A,C,E

Explanation:

Without a feature key:

* Option A: Upgrades are restricted, as the device relies on the feature key to validate software entitlement.

* Option B: Subscription services like antivirus, IPS, or web filtering cannot be configured without the feature key, which activates these services.

* Option D: Configuration changes cannot be permanently saved to the Firebox without the feature key, limiting the device's functionality.

* Option C(Web Setup Wizard) and Option E(one user internet access) do not depend on the feature key and are not restricted in this scenario.

NEW QUESTION # 39

You bought a new Firebox and want to use the configuration from an existing Firebox you already configured. The best way to migrate the configuration is to restore a backup image from the existing Firebox to the new Firebox, then add the new feature key.

- A. True
- B. False

Answer: A

Explanation:

When migrating configurations from one Firebox to another, restoring a backup image from the existing Firebox to the new one is a valid and efficient method. This approach will transfer all configuration settings, policies, and security settings to the new Firebox. After restoring the backup, you need to add the new feature key specific to the new Firebox, as feature keys are unique to each device. This method preserves the existing configurations while adapting the setup for the new hardware.

NEW QUESTION # 40

Users cannot download a PDF file from your intranet. You know the file is safe to download. When you review the log messages, you see that IntelligentAV identified the file as malicious. The only way to resolve this is to change the file extension.

- A. False
- B. True

Answer: A

Explanation:

When IntelligentAV identifies a file as malicious, users have options other than changing the file extension to resolve the issue. IntelligentAV relies on AI-driven detection, and if the PDF file is known to be safe, an administrator can manually adjust the IntelligentAV settings or add an exception for the specific file.

Changing the file extension alone does not address the root of the detection and is not a reliable solution to bypass IntelligentAV checks.

NEW QUESTION # 41

After you enable content inspection, your users see a certificate warning when they browse the Internet. What is one way to resolve this? (Select one.)

- A. Configure a WebBlocker exception for your certificate server
- B. Configure the HTTPS proxy policy to allow inbound traffic from your CA
- C. Import a trusted web server certificate to the Firebox
- **D. Install the current Firebox Proxy Authority certificate on your user workstations**

Answer: D

Explanation:

When content inspection is enabled on a Firebox, it decrypts HTTPS traffic for inspection, which requires presenting its own certificate to the client devices. This often causes certificate warnings in web browsers because the certificate issued by the Firebox is not inherently trusted by the client browsers. To resolve this, you need to install the Firebox's Proxy Authority certificate on each user's workstation as a trusted certificate. This action will prevent browsers from displaying certificate warnings, as they will recognize the Firebox certificate as a trusted source for secure connections.

NEW QUESTION # 42

You can run TCP Dump directly from the Firebox.

- **A. False**
- B. True

Answer: A

Explanation:

You cannot run TCP Dump directly from a Firebox device. While Firebox has various monitoring tools such as Traffic Monitor and Firebox System Manager, it does not natively support TCP Dump, which is a command-line tool primarily available on Linux-based systems. Instead, packet captures and traffic monitoring need to be handled through Firebox-specific tools or by exporting logs to external devices for further analysis.

NEW QUESTION # 43
