CIS-Discovery認證指南，CIS-Discovery考題資源

KaoGuTi是一個可以成就很多IT人士的夢想的網站。KaoGuTi能為參加IT相關認證考試的考生提供他們想要的資料來助幫助他們通過考試。你還在為通過ServiceNow CIS-Discovery認證考試苦惱嗎？你有想過購買ServiceNow CIS-Discovery認證考試相關的課程來輔助你嗎？KaoGuTi可以為你提供這個便利，KaoGuTi提供的培訓資料可以有效地幫你通過認證考試。KaoGuTi提供的練習題幾乎真題是一樣的。有了KaoGuTi為你提供的精確的ServiceNow CIS-Discovery認證考試的練習題和答案，你可以以高分通過ServiceNow CIS-Discovery認證考試。

要獲得ServiceNow CIS-Discovery認證考試的資格，候選人必須至少有六個月的實際經驗，實施ServiceNow發現和服務映射應用。此外，候選人必須完成ServiceNow發現基礎課程和服務映射基礎課程。

最新的 Certified Implementation Specialist CIS-Discovery 免費考試真題 (Q52-Q57):

問題 #52

In Discovery, which one of the following causes a pattern to fail during discovery?

Response:

- A. No CI Identifier exists
- B. No firewalls installed on the host
- C. No parse variable operation used in a step
- **D. No pattern attached to a classification**

答案： D

問題 #53

The following shows part of the Windows OS - Servers pattern in Pattern Designer:

Which of the steps above use(s) a shared library?

- **A. Step 25**
- B. Step 26
- C. Both steps
- D. Neither step

答案： A

解題說明：

Step 25 uses a shared library called Windows - Storage, which is a reusable component that can be invoked by multiple patterns to discover the storage information of Windows servers. A shared library is a collection of steps that can be referenced by a pattern name and can accept input parameters and return output values.

Shared libraries help to avoid duplication of code and simplify the maintenance of patterns.

* Windows - Storage shared library

問題 #54

The deletion strategy is set to 'Mark as absent' for related Disk CIs discovered via the Linux Server pattern. If a related Disk CI is discovered during the Linux Server discovery and then the same related Disk CI is not found the next time the Linux Server is discovered, the following will happen:

- A. The Disk CI Operational Status (operational_status) is set to Non-Operational.
- B. The Linux Server CI Operational Status (operational_status) is set to Non-Operational.
- **C. The Disk Status CI (install_status) is set to Absent.**
- D. The Linux Server CI Status (install_status) is set to Absent.

答案： C

解題說明：

The deletion strategy 'Mark as absent' means that when a related CI that was previously discovered by a pattern is no longer found, the install_status attribute of that CI is set to Absent. This indicates that the CI is missing or removed from the network. The main CI (in this case, the Linux Server CI) is not affected by the deletion strategy of the related CI (in this case, the Disk CI)12.

問題 #55

Based on the following images, which choice best describes what occurs if Discovery sets the name attribute of a discovered Windows Server CI to 'Windows1' and then Altiris discovery runs detecting 'Windows2' for the name attribute on the same CI?

The first screenshot shows the 'Reconciliation Definitions' table. It lists three definitions for the data source 'Windows Server [cmdb_ci_win_server]'. All three have the attribute 'name' set to 'true'.

	Data Source	Applies to	Attributes	Active
☐	Altiris	Windows Server [cmdb_ci_win_server]	name	true
☐	OpenView	Windows Server [cmdb_ci_win_server]	name	true
☐	ServiceNow	Windows Server [cmdb_ci_win_server]	name	true

The second screenshot shows the 'Data Source Precedences' table. It lists three precedences for the data source '[cmdb_ci_win_server]'. The 'Order' values are 100, 200, and 300, and all are 'Active'.

	Applies to	Data Source	Order	Active
☐	[cmdb_ci_win_server]	ServiceNow	100	true
☐	[cmdb_ci_win_server]	OpenView	200	true
☐	[cmdb_ci_win_server]	Altiris	300	true

- A. The name of the CI does not populate with either discovery.
- B. The CI is not discovered because Discovery is not listed in either image.
- C. The name of the CI changes to 'Windows2'.
- D. The name of the CI stays 'Windows1'.

答案： C

問題 #56

How is a discovery pattern utilized by the Discovery Engine.
Response:

- A. By Associating the discovery pattern to a CI Classifier
- B. By Associating the pattern to the Discovery Schedule

答案： A

問題 #57
