## CompTIA Linux+ Certification Exam Sample Questions (Q12-Q17):

### NEW QUESTION # 12

A systems administrator wants to review the amount of time the NetworkManagerservice took to start. Which of the following commands accomplishes this goal?

- A. **systemd-analyze blame**
- B. resolvectl
- C. systemctl daemon-reload
- D. journalctl

**Answer: A**

Explanation:

The systemd-analyze blame command shows the startup time of each service managed by systemd, allowing the administrator to see how long NetworkManager (or any other service) took to start.

### NEW QUESTION # 13

A Linux administrator needs to analyze a compromised disk for traces of malware. To complete the analysis, the administrator wants

to make an exact, block-level copy of the disk. Which of the following commands accomplishes this task?

- A. `cpio -i /dev/sdc -ov /tmp/image`
- B. `tar cvzf /tmp/image /dev/sdc`
- C. `dd if=/dev/sdc of=/tmp/image bs=8192`
- D. `cp -rp /dev/sdc/* /tmp/image`

**Answer: C**

Explanation:

The `dd` command performs a low-level, block-by-block copy of a device. Using `if=/dev/sdc` (input file) and `of=/tmp/image` (output file) with a block size (`bs`) ensures an exact replica of the disk, suitable for forensic analysis.

#### NEW QUESTION # 14

Which of the following best describes `journald`?

- A. A service responsible for keeping the filesystem journal
- B. A system service that collects and stores logging data
- C. A service responsible for writing audit records to a disk
- D. A feature that creates crash dumps in case of kernel failure

**Answer: B**

Explanation:

`journald` is part of `systemd` and is responsible for collecting, storing, and managing log data from various sources such as the kernel, services, and applications.

#### NEW QUESTION # 15

An administrator receives reports that a web service is not responding. The administrator reviews the following outputs:

Which of the following is the reason the web service is not responding?

- A. The private key is not in the correct location and needs to be moved to the correct directory.
- B. The private key has the incorrect permissions and should be changed to 0755 for the service.
- C. The private key needs to be renamed from `server.crt` to `server.key` so the service can find it.
- D. The private key does not match the public key, and both keys should be replaced.

**Answer: A**

Explanation:

The error log shows "cannot load certificate key `/etc/pki/nginx/private/server.key`", but the listing reveals that `server.key` is located in `/etc/pki/nginx/` rather than the expected `/etc/pki/nginx/private/` directory. Since the file exists but not where Nginx is configured to look, moving it to the correct directory resolves the issue.

#### NEW QUESTION # 16

An administrator needs to verify the user ID, home directory, and assigned shell for the user named "accounting." Which of the following commands should the administrator use to retrieve this information?

- A. `grep accounting /etc/shadow`
- B. `who accounting`
- C. `id accounting`
- D. `getent passwd accounting`

**Answer: D**

Explanation:

The `getent passwd accounting` command retrieves the user's entry from the system's password database, showing fields such as username, UID, GID, home directory, and assigned shell.

## NEW QUESTION # 17
